

# IsiPick by cart

## BENEFITS

**INCREASED  
PRODUCTIVITY**

**FEWER PREPARATION  
ERRORS**

**LESS RUN DISTANCES  
BY  
THE OPERATORS**

**ACCELERATED OPERA-  
TORS TRAINING**

## THE QUICK AND EFFICIENT SOLUTION TO PREPARE SEVERAL ORDERS AT THE SAME TIME.

ISIPICK BY CART is a simple and flexible solution for multi-order preparation that uses Pick-to-light technology.

Several types of carts are available depending on the concerned products, the containers and the orders number, which should be prepared at the same time. So we offer a wide range that enables to prepare from 2 to 50 orders at the same time.

Our carts are equipped with touch tablets, and when necessary barcode or RFID reader, they communicate are connected via WiFi with the rest of the system. They are battery powered.

## A SOLUTION FOR ANY LOGISTIC OPERATION.

ISIPICK BY CART offers all the benefits of Pick-to-light in a mobile cart. This combination provides better productivity and quality than any of barcode or voice picking system. Not only are the operators will be able to work hands-free, but also they have permanently a reminder on the screen about the objects number to be placed in each order until the final validation.

## MORE PRODUCTIVITY, FEWER MISTAKES!

The preparer divides - the movements in the warehouse - by as many orders as he has on his cart, so less fatigue and more productivity.

## EASY TO USE, EASY TO HANDLE.

Using ISIPICK BY CART requires a minimum of training; there is no complexity at the level of the menu, the voice-command, the readability of the list. It means that the operators can be efficient quickly and temporary workers can be quickly integrated into the team with simplified instructions, which will increase the operational flexibility of the service.

## NO EXPENSIVE NETWORK OR WIFI MUST BE PROVIDED.

The ISIPICK BY CART solution of ISITEC International does not require any investment in large servers or in a complex cabling network, in most cases the existing architecture can be used. There is no need for large, complex and expensive modifications to your Warehouse Management System.

## FLEXIBLE AND SCALABLE.

The ISIPICK BY CART solution enables the preparation of several orders simultaneously. The type of cart shall be adapted to the configuration in order to allow the best possible ergonomics. Our engineering office will collaborate with you to design the cart corresponding to your application.

Tubular structure, aluminum, welded frames will be used according to the requirements, the optimal materials in order to reach the best quality / price.

For a growing amount of works and orders, the carts can be simply and quickly adapted.

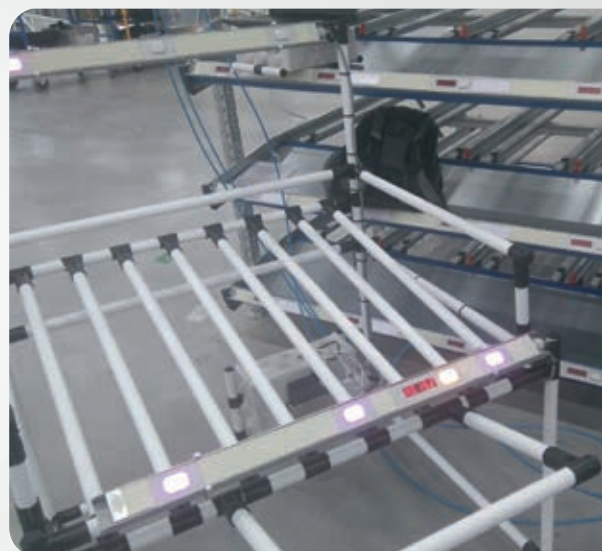

For the carts that will load a lot of weight, ISITEC offers an optional electric assistance (up to 500kg on flat ground).

### Cart power supply

The carts are battery powered, that are adapted to the on-board electrical equipment and to the required nominal power, in order to ensure a good autonomy. The battery can be also adapted to the work conditions, for example in extreme-cold.

ISIPICK BY CART uses rechargeable batteries that last more than 8 hours. For a teamwork, the battery can be easily changed in a very short time.

**This technology can be combined with other ISITEC International solutions such as:**

- ✓ **ISIPICK BY SCALE :** a control solution by a counting scale. Under each box / carton location, we can put a check weigher that will check, at the same time that you put the parts in the right order but also thanks to the calculated weight, check that you have filed the exact number of expected objects.

- ✓ **ISIPICK BY VOICE :** a picking solution by voice  
To take you to the picking area, and depending on the products rotation, the reference number ... several guidance methods such as the pick-to-light, the touch tablet but also the PICK BY VOICE can be used.  
Voice indication of the picking area, reference and number of items per located picking area.

- ✓ **ISIPICK BY LASER :** laser-aided picking solution  
As the PICK BY VOICE; it is here to guide the operator by indicating him through a motor-controlled laser the location where he must pick (and sometimes the zone where he must store).
