LE VOICE LAB

A fresh perspective on voice and AI

We are a young start-up from Lille specializing in Artificial Intelligence applied to synthetic voice. Our activity revolves around two focal points :

Development of neural synthetic voices

We develop synthetic voices based on the latest advancements in Deep Learning, to offer 100% French technological and ethical alternatives to GAFAM.

Our R&D activity is carried out within the laboratories of INRIA, and in collaboration with other players in French voice tech within Le VoiceLab.

Co-creation of new audio-based customer journeys

We support the integration of this disruptive technology with both new and long-standing players in the voice field, by co-building new customer experiences and processes.

We address both new business opportunities within the audiovisual industry with the expertise of Plaine Images, and accessibility issues through the support of La HandiTech.

Let's talk!
