End-to-end process covered by ETM.next

ETM.next – a Joint Strategic Partner Co-Innovation Program by SAP & BearingPoint – Endorsed by SAP

As one of only 27 industry cloud applications ETM.next is an Endorsed App by SAP

SAP ETM is end of life in 2025 with no planned replacement by SAP, but ETM.next by BearingPoint

BearingPoint agreed to develop a modern new ETM solution on the SAP Business Technology Platform, integrated with S/4 HANA to address SAP client's needs for a modern and sophisticated solution for their equipment and tools management processes

The initiative is managed as a joint strategic Partner Co-Innovation Program.

Integral part of
SAP industry
cloud offering

Award Winning

Endorsed by SAP

Available on SAP Store

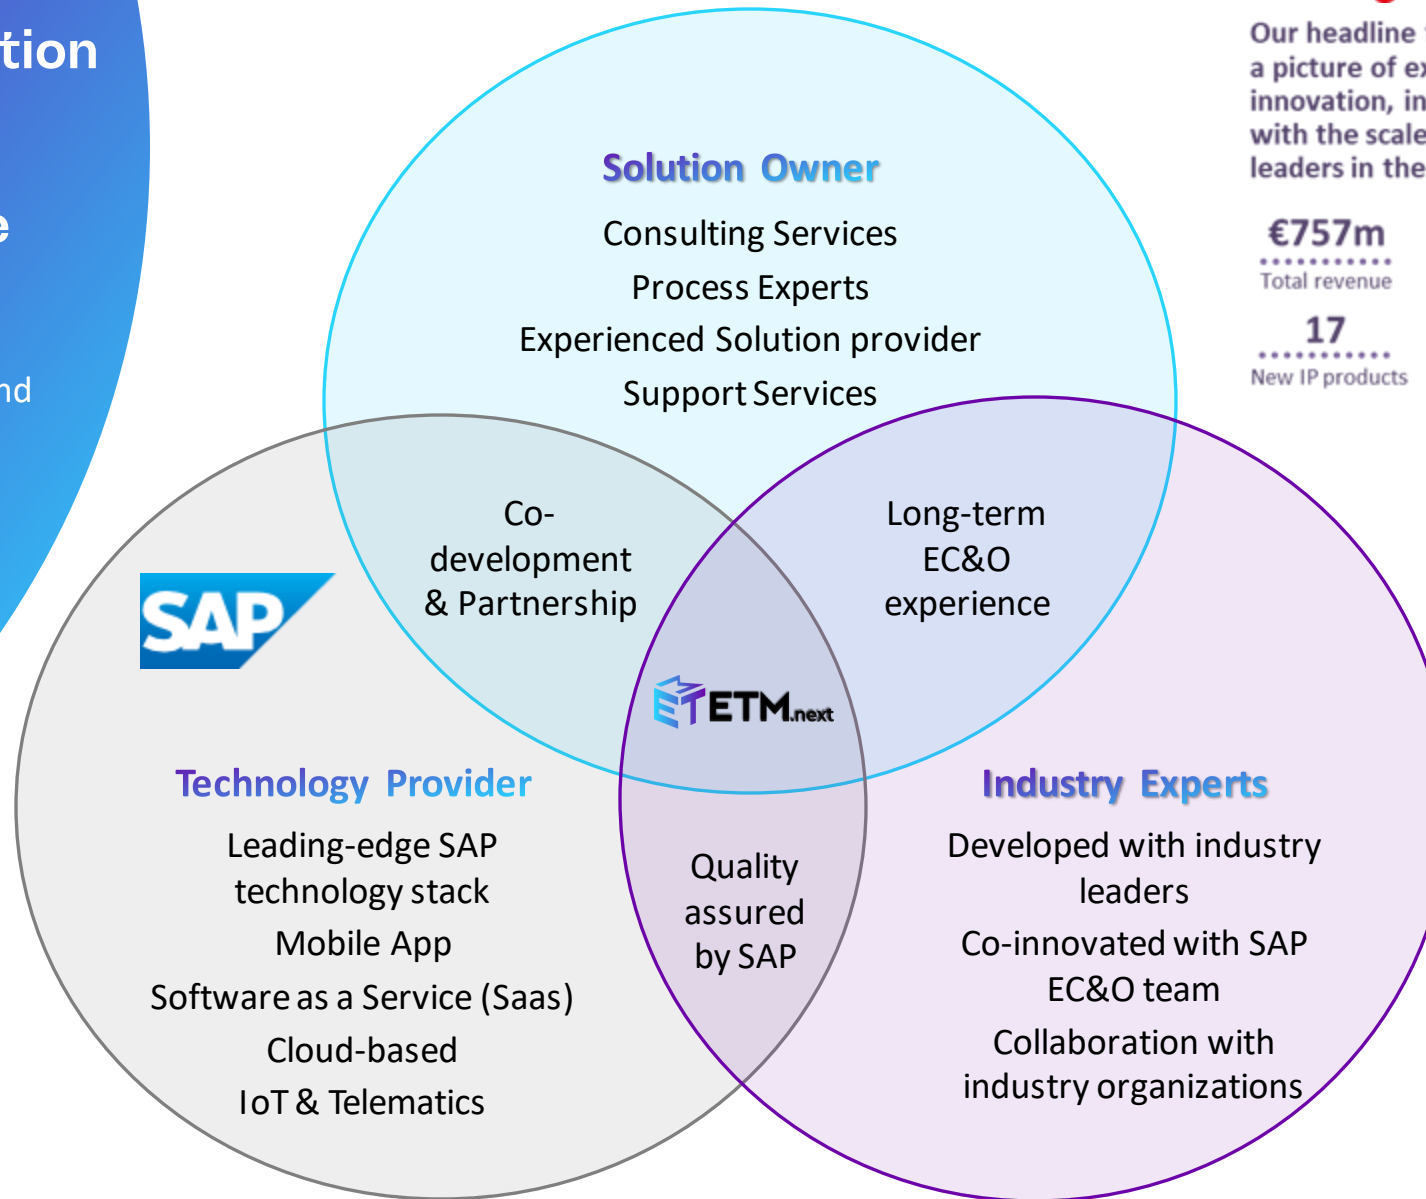

BearingPoint.

Some of our happy customers

 **GRAHAM** **EIFFAGE**
INFRA-BAU HITACHI
ABB **Kiewit** **JEAN BRATENGEIER**
Baugesellschaft mbH **fluxys**

Based on industry expertise & collaboration – applying solution knowledge and consulting experience

ETM.next has been developed under the umbrella of a co-innovation partnership program between SAP and BearingPoint in a forward deployed engineering approach involving industry leaders for co-development using leading-edge technology preparing our customers for the current challenges and beyond.

BearingPoint.

Our headline figures from 2020 present a picture of expanding capability, innovation, investment, and a business with the scale and ambition to be leaders in the new reality.

Project & Heavy Equipment

Critical Equipment & Service Tools

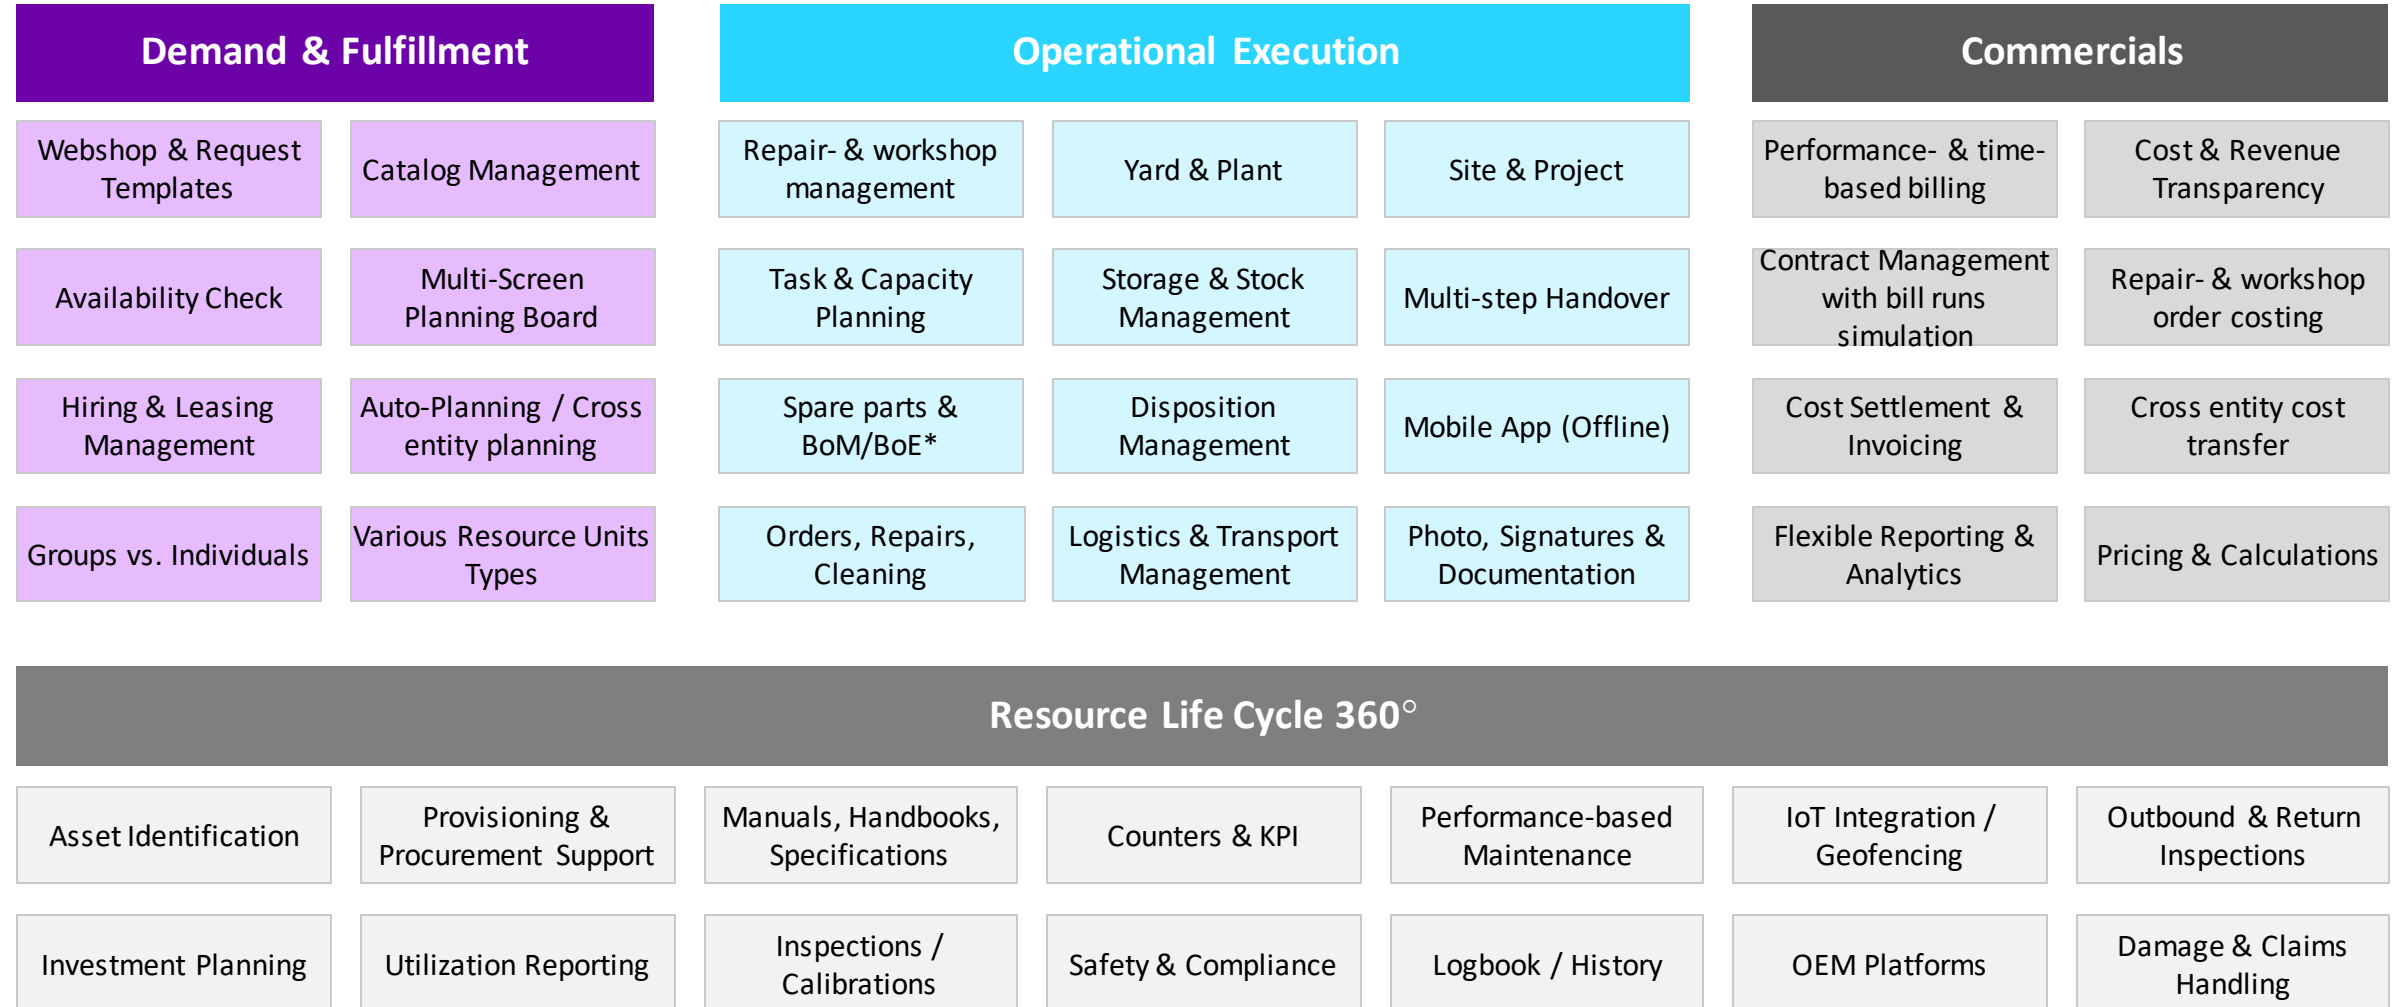

Rental & Leasing Business (OEM)

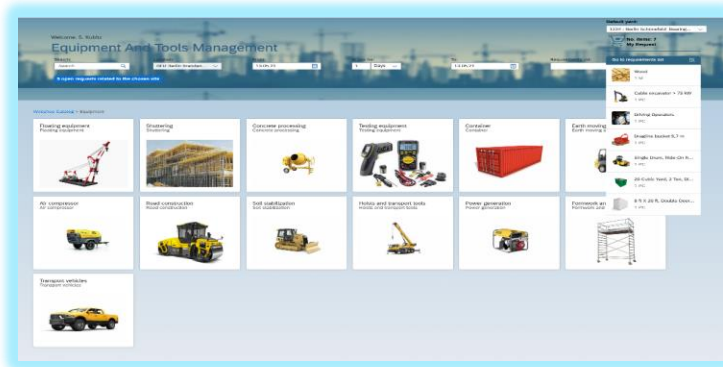

Capable to apply equipment processes end-to-end

Functional Coverage – 4 major building blocks to cover the rental and provisioning processes along the value chain

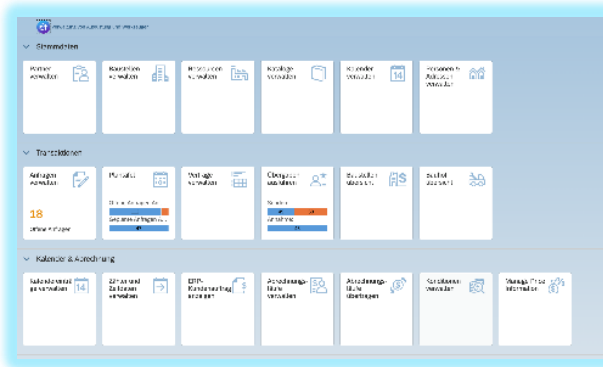

Look & Feel – Modern User Interfaces

State-of-the-art technology, Adaptive Usage, Superior User Experience

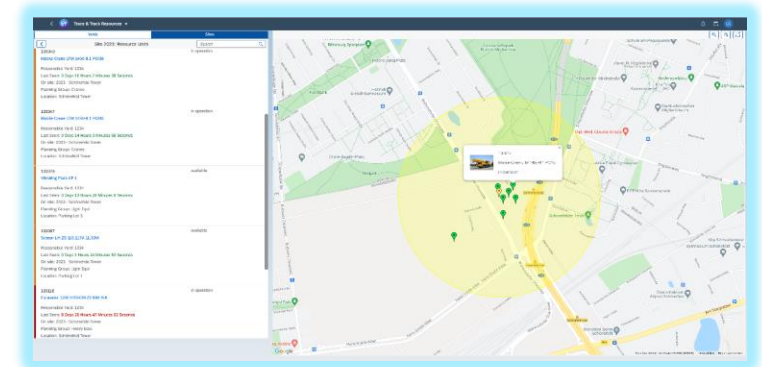

Webshop for intuitive requesting

Standards (e.g. BGL) and custom-built catalogues

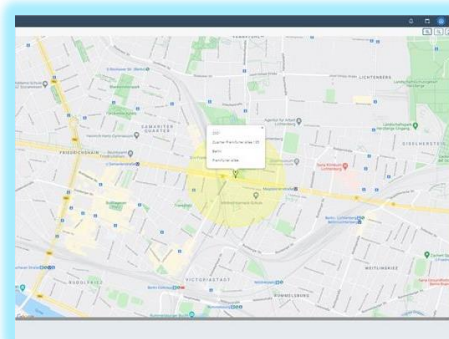

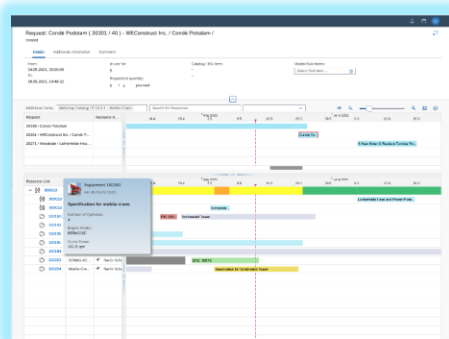

Modern User Interface

Tile-based, well-structured, easy-to-navigate, adaptive usage

IoT & Telematic Integration

Geofencing, asset track & trace, counter values

Multi-screen planning board for superior user comfort

Auto-planning, drag&drop, tagging, planning on aggregated levels, resource detection on integrated Google Maps

Mobile App for iOS and Android devices

Offline work, electronic signature, scanning, photo documentation

High Level Process, User Interfaces & Architecture Overview

User Interfaces

Web Shop

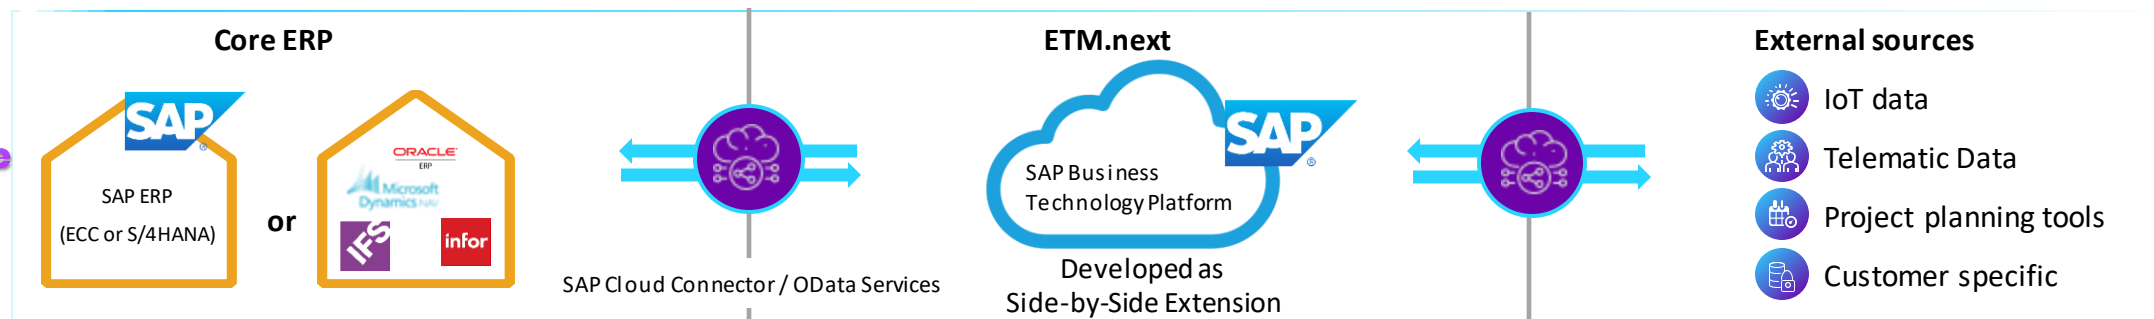

Fiori Launchpad and Apps

Architecture

Designed to serve people first

Overview of selected functionalities and features for different user groups

Asset, Equipment & Fleet Managers

- Maintenance Management
- Revenue & Cost Reporting
- Utilization Reporting
- Asset Track & Trace
- Telematics & IoT

Site + Project Managers

- Easy Requesting
- Resource Overview
- Deliveries & Returns
- Billing Simulation / Adjustment
- Mobile App for Execution
- Temporary Warehouse Management

Project Managers

- Proposal Management / Individual Pricing
- Cost & Revenue Transparency
- Internal Cost Allocation / External Invoicing
- Various Pricing Models & Types of Usage
- Financial ERP Integration
- Reporting & Analytics

Planning & Disposition Managers

- Demand Collection
- Availability Check
- Individual, Pooled & Grouped Resources
- Configurable Equipment
- Multi-Screen Planning Board
- Adaptive User Interfaces (Drag & Drop)

Yard & Plant Managers

- Resource Overview
- Capacity / Warehouse Management
- Inventory Management
- Utilization Reporting
- Deliveries & Returns
- Handling of inbound rental

Safety & Compliance Managers

- Compliance Management
- Checks & Certificates
- Document Handling
- Tagging feature
- Cockpit View
- Mobile App for Execution

BearingPoint's ETM.next – The next generation ETM tool

Rental Management for Equipment, Tools, Vehicles & Critical Assets													
ETM.next													
Technology	 Software as a Service (SaaS)	 Deep ERP Integration	 Comfortable User Interfaces	 OEM integration, e.g. Volvo, Liebherr, Wirtgen	 Modular	 Easy-to-scale	 Cloud-based	 IoT Integration	 Telematic Integration	 Native Mobile App	 Offline Capability	 Multi-Screen Capability	 Google Maps
Operational Efficiency	 Requesting (Webshop)	 Comprehensive Planning	 Logistics Support	 Storage Management	 Asset Track & Trace	 Digital Process Execution	 Maintenance, Repairs, Cleaning	 Inspections, Safety & Compliance	 Photo Documentation	 Electronic Signature			
Commercials	 Commercial Setup	 Various Resource Unit Types			 Flexible Pricing	 Contract Management			 Reporting & Analytics	 Billing Simulations			
Standard ETM Solution	ETM Planning		Document Entry		Calendar Maintenance		ETM Settlement		Inventory				

BearingPoint's ETM.next Mobile App: Features & Functionalities

Digitizing processes in the field and helping to avoid paper-based or verbal processes.

Mobile **process control** to perform and monitor daily operations supporting the main process flow.

Digital features like scanning, pairing, photo documenting or tracking make it easy and comfortable to use

Make use of existing **mobile devices** as ETM.next is available on either iOS and Android devices and turn process execution user-friendly for your workforce

Enjoy the **offline-functionality** to perform your project tasks wherever necessary, even if there is no internet available (off-shore, underground, rural areas) and reconnect and update when online again

Integration into your IT landscape & Open Platform Character

ETM.next is applying open interfaces to be integrated into your IT landscape. Though it is a standardized cloud product it is customizable to a certain extent and open for custom-built extensions

- Integration into core ERP solution
 - SAP ECC
 - SAP S/4HANA (on-prem, private cloud, public cloud)
 - Other ERP solutions
- Set of standard APIs to integrate into all relevant modules of SAP ERP, e.g. FI, CO, MM, SD, PS, PM
- Applying SAP Cloud Portal Service:
 - One central access point
 - Personalized User Experience
 - Predefined Content per Role
 - Integration of SAP and Non-SAP solutions
 - Role-based authorization concept
- Seamlessly embedding into your landscape:
 - RESTful Odata APIs for a standardized way to integrate into other solutions

- User exits at neuralgic locations to have a customizing option to a certain extent, e.g.:
 - number assignment
 - auto-planning
 - to be expanded continuously
- Continuously ongoing development and improvement with the option of custom-built functionalities and features for your specific requirements

Integration into your equipment

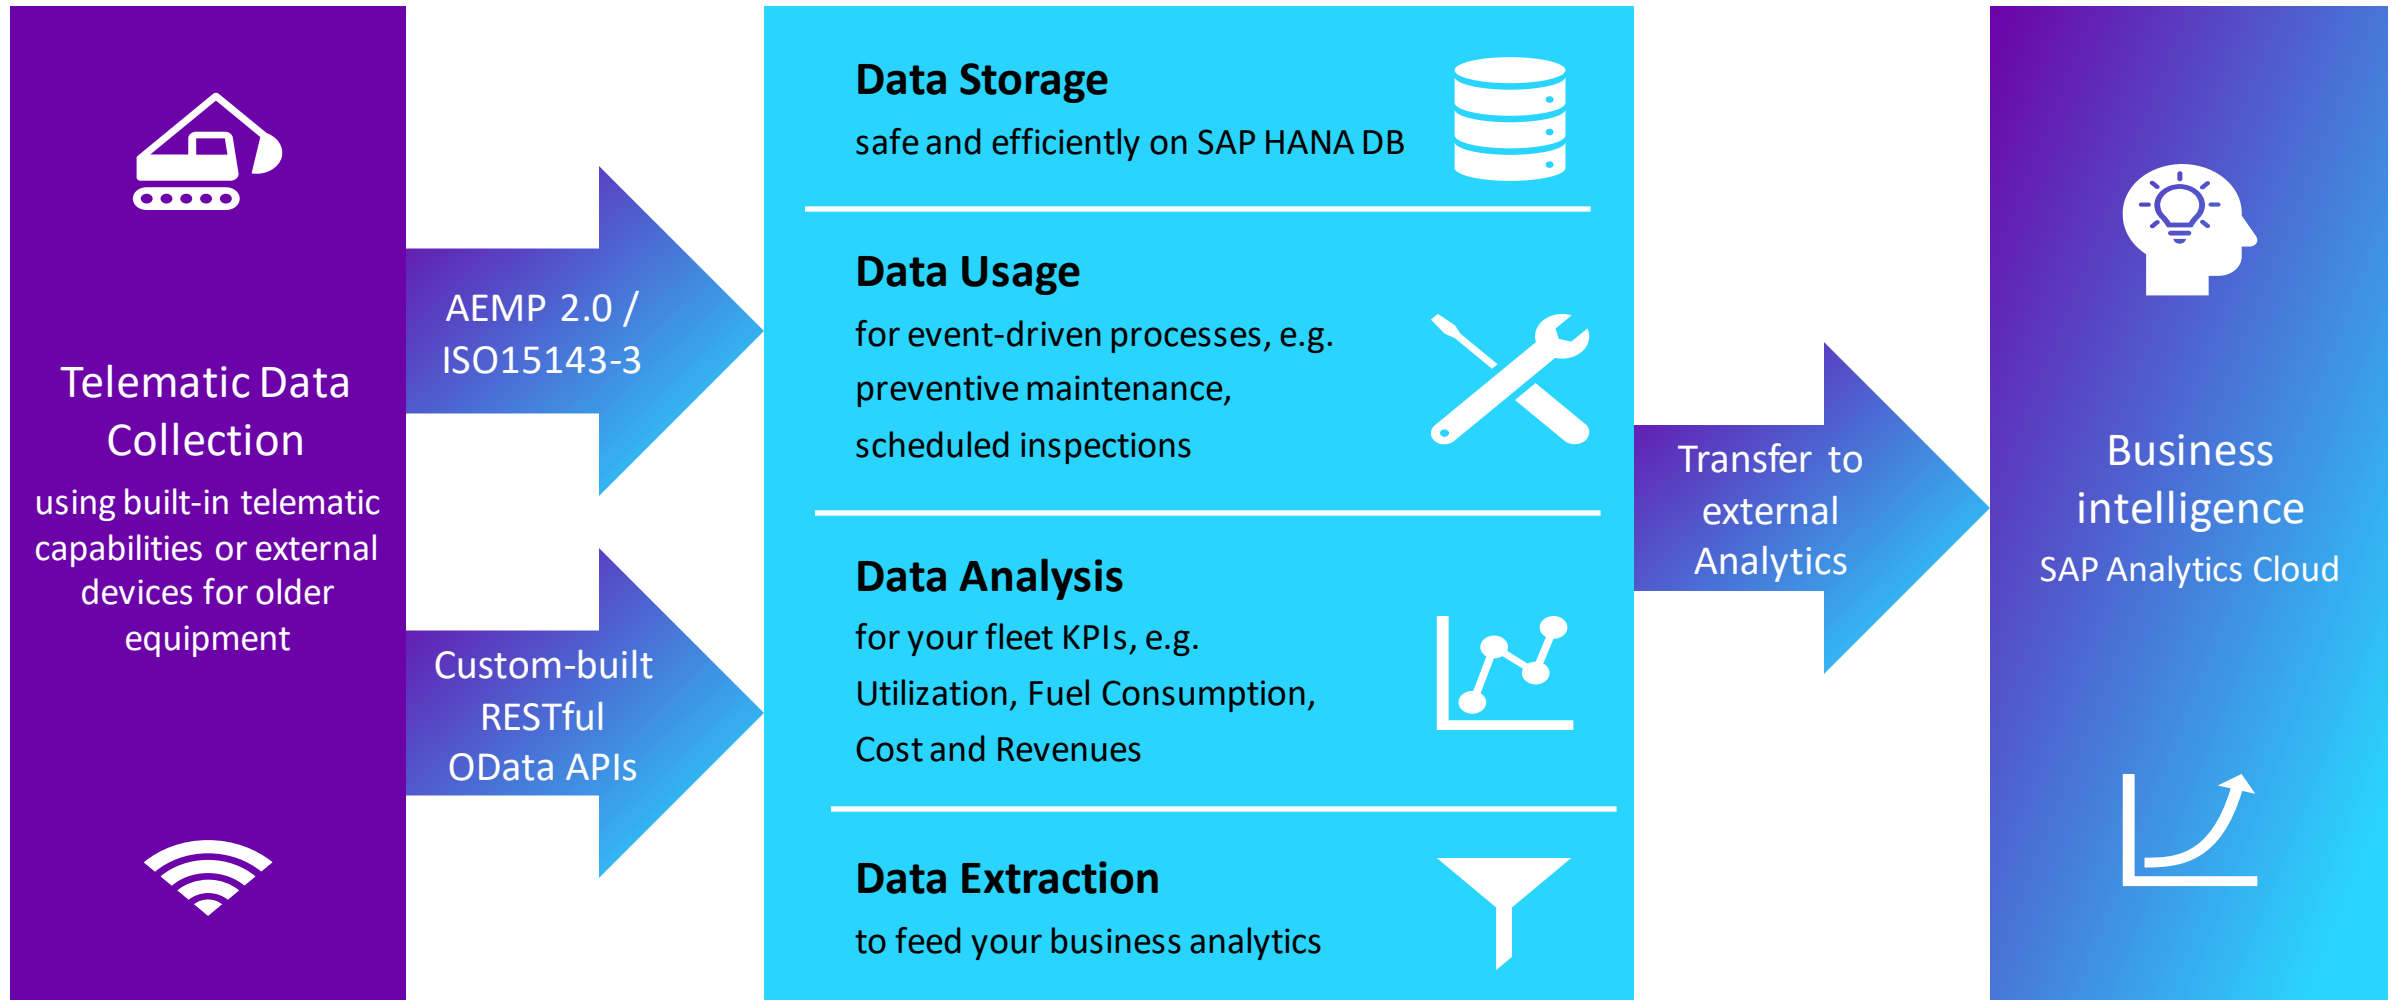

ETM.next leverages the potential of your fleet telematics

- Capturing the most important data points, e.g.:
 - Fuel Consumption
 - Operating Hours
 - Last known location
- AEMP 2.0 / ISO 15143-3 interface for entire set of data points
- Interfaces to common OEM platforms as a standard:
 - VisionLink
 - KOMTRAX
 - WITOS FleetView
 - To be expanded continuously
- Creating Business Intelligence:
 - Providing **theft protection** and avoid losses
 - **Cost savings** by optimizing equipment uptime and by increasing maintenance workflow efficiency or lower fuel consumption
 - **Operations Control** by **asset tracking** via **geolocation** and preventing misuse / non-usage delivering accurate **project cost** overview
 - **Regulatory Compliance** by ensuring proper inspections of vehicles, equipment & tools and combining HoS (hours of service) data with operating hours of fleet along with a proper documentation

Creating Business Intelligence by making your data available for various purposes

How can ETM.next accelerate S/4 HANA transformations?

ETM.next is not a module, but a side-by-side extension to client's ERP system

Lean S/4 HANA Core

Carving out ETM functionalities from core ECC ahead will reduce the transition efforts to S/4 Hana

Limited technical conversion

Data and code conversion in context of ETM data objects and custom build code will be obsolete

Eased Cut-over

Reduced scope on process or entity level will ease the overall complexity

Early Adoption of Industry Cloud

Introducing SAP BTP for industry-specific extensions as well as the core development platform for custom build extensions

Benefits for your rental business

ETM.next key capabilities for rental

- Flexible master data and catalog capabilities
- Webshop and request management
- Management of attachments (“Anbaugeräte”)
- Rental pricing and contract management
 - Time & usage based
 - One-time fees (e.g. for transport, damages)
 - Different states & calendars possible
- Planning on group and individual levels
 - Automated planning
 - Locations with Google Maps support
 - Planning cross locations and yards
- Procurement agreement for leasing, rental and resource purchasing
- Flexible billing management with broad pricing rules and pricing conditions capabilities

- Multi step handover and approval management
 - Commissioning and transport
 - Outgoing, returns, in transit
- Management of relevant inspection & compliance activities
 - Time & performance based
 - Planned / unplanned
- Management of repair shop and on-site repairs
- Parking lot, bin and warehouse management
- Track & Trace, IoT integration and geofencing
- Mobile app support for resource management, contract management and handover management
- Key account overview for equipment and contracts

Benefits for lessees

Detail leasing & rental agreement capabilities

- Leasing & rental agreement handling
 - Different agreement types (e.g. full-service, net-lease etc.) for inbound
 - Flexible periodicity, termination, renewal options
 - Time & usage based pricing as well as one-time fees
 - Interest rates, Residual, present and market value calculations
- Lease accounting integration supporting operative and finance lease variations and rentals
 - Integration into financial accounting by flexible event management initiating asset creating, payments, depreciation etc. supporting different valuations and accounting standards (e.g. IFRS 16)

- Flexible master data and catalog capabilities supporting catalog mapping to key vendors catalogs
- Full management of relevant inspection & compliance activities (for net-lease, rentals)
 - Time & performance based (for net-lease, rentals)
 - Planned / unplanned
- Service & compliance monitoring (for full-service lease)
- Flexible reporting for fleets, assets and agreements
 - Asset utilization (in use, in inspection, renewal status)
 - Leasing & rental agreements status overview
 - Fleet overview
 - Yard & Site overview

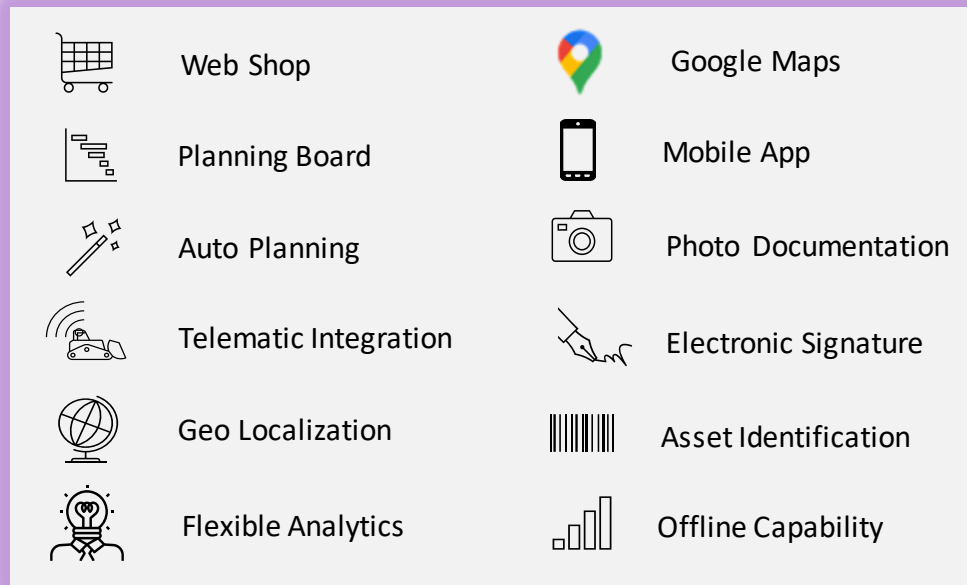

BearingPoint's Resource, Equipment & Tools Management

Functions

Major Features

Clients

ETM.next Capabilities in a nutshell

- Optimization of Asset Utilization
- Cost Reduction
- Focus on value-adding processes
- Digital Process Execution
- Real-Time Visibility / Integrated Planning
- Flexible Pricing / Price Models
- 360°-View on the Asset Fleet
- Reduction of manual Tasks
- Supporting new Business Models
- Quality of Data improves Quality of Decisions
- Enabling Collaboration
