Simulation and Digital Twin

Digital Twin provides the opportunity by creating the current behaviour of the process in the digital environment:

- to monitor the process
- to be optimized
- forecasting by using smart algorithms about process
- to **simulate** the costly and laborious works that can not be tested in reality with real data
- to view bottlenecks and queues in processes
- to reach alternative scenario results quickly

Simulation and Digital Twin

Simovate Simulation

You can see the bottleneck and optimization suggestions and create the most accurate process at once by creating a digital twin of the factory.

Increasing productivity

Process improvement

Cost reduction

Providing viable solutions

2D Simulation

3D Simulation

Simulation with AR

Questions

- How can I see the digital twin that I created in the physical environment?
- How can I see the bottleneck and queue points before production?
- How can I see my machine resource utilization rates in advance according to my production plan and perform line balancing processes?
- How can I transfer processes to 3D environment in the easiest way?
- How can I effortlessly organize my production line with drag and drop?

SimMES: Manufacturing Execution System

Data Collection – Product Tracking – Performans Analysis

- Instant and simultaneous **data collection** from the production site
- Display panel with OEE, scheduled maintenance, predictive maintenance, sensor information and scheduling summary information where all machines can be combined and filtered
- **ERP Integration**
- Product tracking by order number
- **Overall Equipment Efficiency (OEE) analysis** with machine downtimes and ERP work order data
- Calculations and calibrations

SimoMES: Manufacturing Execution System

Compatible Products/Protocols

- PLC Compatibility (Siemens, Bosch, Beckoff, Schneider, Omron, Turck, Banner, OPC)
- Modbus
- Datascan
- Microcontroller
- Conforms to industry standards
- I/O card support in the case of not taking the data from PLC
- IP65 protected HMI display on the production area

SimovIN: Digitization of Standard Instructions

- Description and demonstration of the operation steps
- Guidance with document and video
- Control and reporting of step completion times
- Increased efficiency in personnel training
- Standardization and updating of trainings
- Image transfer from the field in cases that cannot be completed

2D Panels

3D Models & Animation

SimAI: Artificial Intelligence Framework

Predictive Maintenance

- Prediction of Future Failures from Machine Sensor Data and Failure Records
- Creating a Maintenance Plan
- Integration into the Production Plan
- Seeing the Status of Machines Instantly

Scheduling

- Stochastic, Realistic and Optimistic Scheduling Results
- Access via Web, Mobile and Desktop
- ERP Integration
- Production Plan and Maintenance Plan Integration

Demand Forecasting

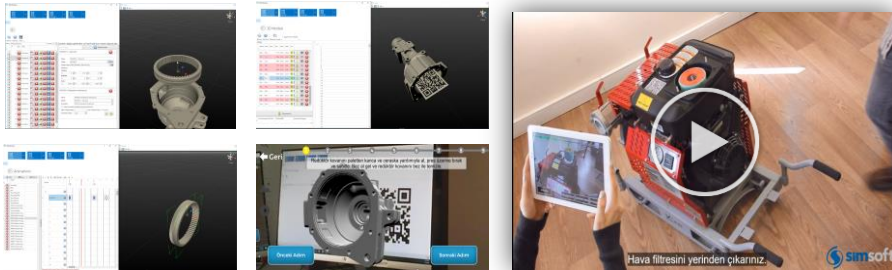

- Analysis and Display of Historical Data
- Elimination of Idle Stocks and Wrong Orders with Artificial Intelligence Supported Automatic Ordering
- Predicting and Reporting of Order Quantities

SimovAR: Augmented Reality

Maintenance – Repair - Assembly

- Visualization of maintenance-repair/assembly instructions with 3D models and animations
- Full Integration with IoT Supported Devices
- Making Experience in process steps sustainable
- Ensuring that the Transactions are Performed Error-Free
- Reduction in Maintenance-Repair/Installation Costs

Remote Support

- Provide Remote Support as if you are in the field
- Significantly reduce maintenance trips
- Avoid sudden machine downtime costs
- Shorten approval processes
- Access to expert personnel information at any time

SimovAR: Augmented Reality

Museum Applications

- Visualization of history with 3D models and animations
- Interactive entertainment
- Game – Based learning tools

SimoVR: Virtual Education

- Realization of trainings that are very difficult to do in real environment in virtual environment
- Risk-free, cost-free and repeatable trainings
- Possibility to train many users
- Identifying missing trainings with the evaluation and reporting tool
- Increasing the quality and real feel of theoretical education

Crane Simulator

Factory

Port

Maintenance - Repair - Assembly Trainings

CNC

Armored Vehicle

Assembly

OHS Trainings

Fire

Electric

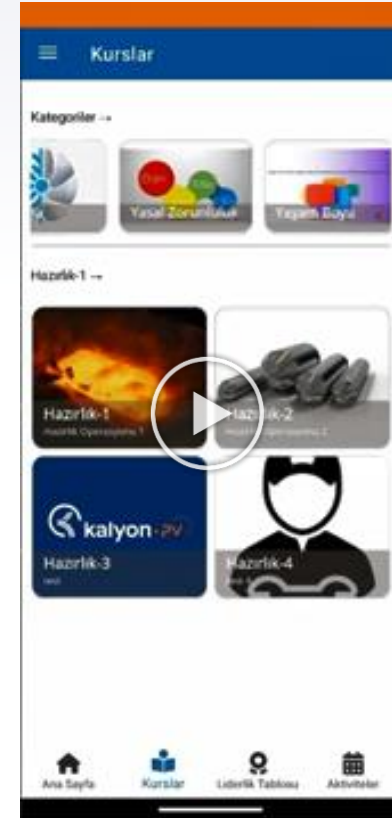

SimoVR: Digital Orientation

- Orientation with Virtual Factory Tour
- On-the-Job Training with Virtual Factory Tour
- Quiz-Based Learning Module
- Ability to Work on Platform Independent Phone, Tablet, Computer and Virtual Reality Glasses
- Information Transfer with Virtual Character

SimoVR: Learning Management System

- Virtual Reality Integration
 - Opportunity to receive practical training in an environment closest to real life
 - Risk-Free, Cost-Free & Repeatable Trainings
- WEB-Based Education Content Preparation and Report Tracking Application
 - Content Preparation
 - Detailed Reporting and Analysis Module
- Operator Content Tracking Mobile Application
 - Incentive Education with Gamification Elements

SimoVR: Wearable Technologies

Walking Platform
Integration

SimoGlove: Virtual
Reality Glove

Simage: Image Processing

Sleep Tracking System

- Artificial Intelligence Supported Sleep Tracking System from Driver's Eye, Mouth and Head Movements
- Audible and Vibrating Warning
- "Plug and Play" System Adaptable to Every Vehicle
- Road Tracking and Recording System with Front Camera

Quality Control System

- Faulty Part Detection with High Definition Cameras
- Automated High Precision Quality Control System
- Error Reporting System
- ERP Integration
