

Use Artificial Intelligence to align your strategic decisions and actions with the actual "customer" risk.

AiVidens is an AI-based solution that helps you manage your receivables. It allows you to control your cash flows by analyzing your customers' payment behavior in real time and anticipating default risk.

You will be able to align your strategic decisions and recovery actions with the actual default risk by working with our financial SaaS.

The user will also benefit from a refined customer relationship management tool, through a set of business dashboards included in our solution.

What makes AiVidens' solution unique?

- AiVidens is an innovative company that uses the latest technologies in Artificial Intelligence.
- Thanks to our centralized customer data and in-depth understanding of risk, you have the keys to make better decisions.
- Our predictive cash position allows you to better define your collection strategies and optimize your actions.
- Our solution has been designed by and for users to provide an optimal and streamlined experience.

Our customers are talking about us.

"AiVidens' AI proactive management solution allows us to predict collections and save valuable time in optimizing our working capital and collection procedures."

FRÉDÉRIC SCHUMMER
Head of SSC GBS Finance Belux chez Engie

COBELPRO
REAL ESTATE MANAGERS

"As an independent real estate manager and advisor, AiVidens allows us to provide owners an excellent predictive tool to organize their portfolio in the most efficient way."

GILLES NAEYAERT
CEO of Cobelpro

We provide you with two major components which can be combined according to your needs:

Insights and **Collection**.

Insights is designed for managers of finance departments who would like to have a better understanding of the risks involved with customer commitments made by sales teams and who want to better assess the cash flow risk.

What we offer with Insights:

- ➔ Insights gives you access to traditional KPIs such as DSO (Days Sales Outstanding) but also to specific AI-generated KPIs based on payment and risk prediction.
- ➔ Many reports are automatically generated for users such as finance managers, collection teams or sales teams.

Collection is a monitoring tool that allows collection teams to centralize all their customer data. Your teams will be able to monitor their collection operations on a daily basis.

What we offer with Collection:

- ➔ Collection's built-in intelligence allows you to choose the most appropriate collection strategy to maximize cash, reduce risk or a combination of both.
- ➔ You can easily prioritize your employees' tasks based on the customer's payment history and their estimated default risk.

The data

AiVidens maximizes the use of your company's own data, as well as external data, to achieve optimal results. In order to start using our solution, we will need your customer information, invoices, credit notes and payment history.

Implementing the solution

- 1• Easily process your data through our universal connector.
- 2• Easily integrate the solution into your existing application landscape.
- 3• Quickly set up the solution thanks to its pre-configuration.
- 4• Minimize your project team's involvement thanks to our own methodology.

Implementation time = a few weeks to 3 months*
Depending on your needs, available data and analysis level.
