

Introducing

Experience a new generation of Immersive VR

# About Skinetic

Have you ever put on your virtual reality headset and wanted to touch and feel what was happening in the virtual world, like in Ready Player One? Have you imagined feeling branches scraping across your chest as you move through the jungle, a curtain of water falling on your shoulders as you pass under a waterfall, or the breath of a monster sneaking up behind you?

The Skinetic vest allows you to experience virtual reality like never before: live and direct, true-to-life sensations!

**Live an incomparable experience by feeling every interaction in your VR environment.**

# Optimal sensitivity for maximum immersion

The Skinetic vest has 20 highly innovative voice-coil motors all over the torso, providing various tactile sensations.

To map the tactile feedback points in the skinetik design, we studied the human body's tactile sensitivity allowing tactile sensation anywhere on the device.

# What's unique about Skinetic?

## Full spatialization capacities

Skinetic provides localized sensations and motions, providing realistic haptic feedback.

## Richness and precision of sensations

The voice-coil motors integrated into Skinetic allow us to reproduce infinite sensations.

## Unexplored field of possibilities

Feel more than the blows and impacts of the virtual world: the whooshing wind of an approaching subway, leaves gently falling on your shoulders, the flow of the water when swimming in a river...

# Designers & Developers: enhance your experiences by adding the sense of touch

## unitouch studio

Along with the vest itself, Actronika has developed a software solution called Unitouch Studio to help designers and developers create immersive experiences including:

### Collection of Tactile Sensations

Do not start designing HD haptics from scratch.

We bring to you a collection of more than 150 samples and synthesizers tailored for vibrotactile feedback.

### Compose Spatialised Sensations

Create life-like sensations in your experiences! Design highly precise and immersive haptic effects for your experiences.

### Enhance the immersion of your experiences.

Unitouch Studio gives you complete control over the Skinetik SDK. We give designers and developers the freedom to create the experience they want!

Unitouch studio is available for

### Get immersive experiences that adapt to your brand

Do you want your personalized Skinetik vests? It is possible! If you order a bundle of Skinetik vests, we can make it with your design that best represents your brand!

You can test Unitouch Studio software for free [here](#).

## Entertainment

- Enhance the 4D/5D cinema experience by adding localized HD haptic sensations when watching the movie - Don't just watch; live the experience!
- Amusement parks and LBE's experiences will never be the same again!

- Engage your audience further, enhancing visual and audio experiences by adding tactile sensations.
- Take your experiences, advertisements, or events to another level of immersion.

## Marketing

- Experience immersive gaming like never before by adding tactile feedback. Feel the environment as you explore unknown territories, enemy attacks, and more!

## Gaming

## Simulation / Training

- Provide interactive VR immersive training to your employees in a risk-free environment where they can gain experience by simulating work challenges with precise tactile feedback.

# Pre-order the Skinetic vest

**Skinetic Creators Edition - 789.95€\***

\* excluding VAT and delivery costs

## What's in the box?

- 1x Skinetic - Creators Edition
- 1x Battery
- 2x Washable Inner-layer
- 1x USB Cable - 5m

## Features:

- 20 high-definition haptic channels
