

1st European DataHub

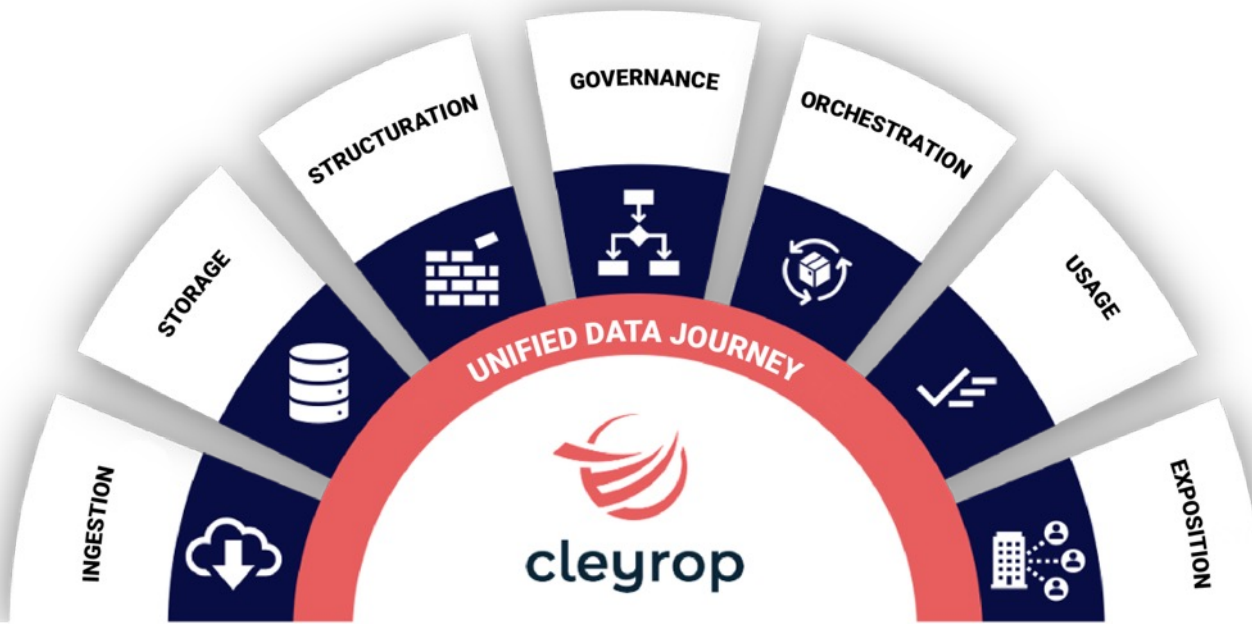

A unified, sovereign, secure Data platform

Our mission: Democratize & industrialize data usage within a trusted framework.

“ At a time when the use of data is becoming as exciting as its control a strategic issue, Cleyrop is asserting its ambitions: to provide the trusted platform to put data intelligence at the heart of organizations. ”

Cleyrop DataHub, a unified and sovereign platform that covers the entire data life cycle...

... to ensure the adoption and industrialization of all Data & IA projects in a compliant & trusted environment.

ADOPTION & SIMPLICITY

- ✓ Unified and fluid journey through all stages of data lifecycle
- ✓ Intuitiveness, user-friendly UX for all users, from data experts to business / data consumers
- ✓ Simple and comprehensive monthly subscription for full access to the platform

INDUSTRIALISATION & DAY1 VALUE

- ✓ SaaS offer ready to be deployed to create value from Day One
- ✓ Capacity to store, process and share large volumes of data
- ✓ Industrial approach (scalability, evolution, monitoring, performance, finops, SLA...)

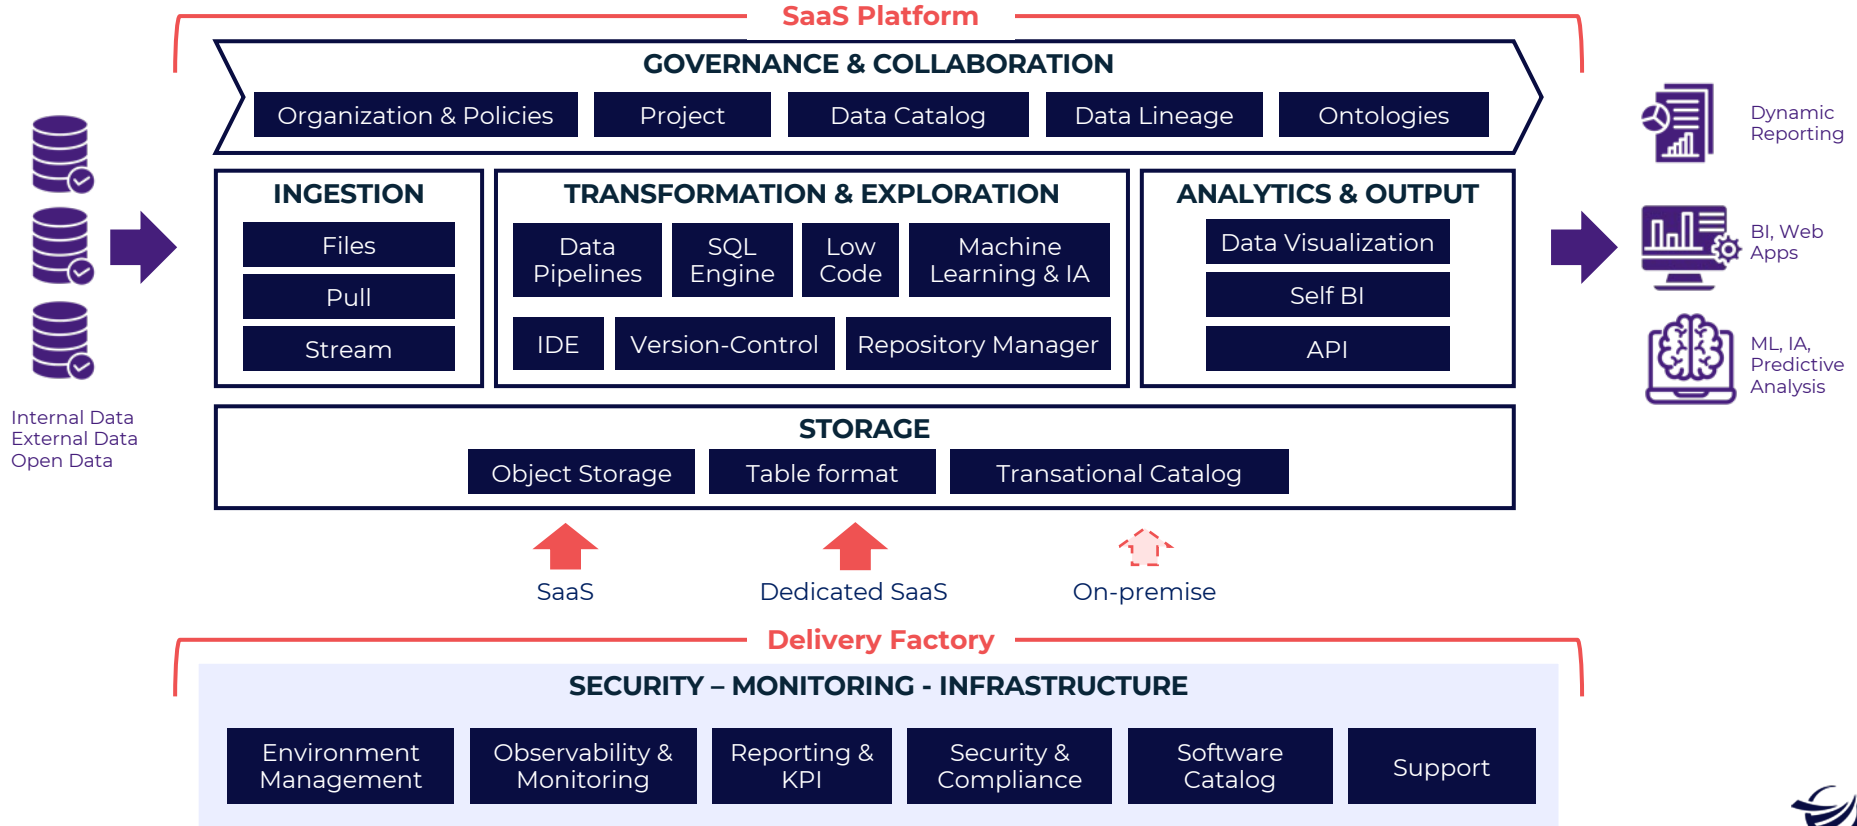

SOVEREIGNTY & SECURITY

- ✓ End-to-end European sovereign technology immune to extraterritorial laws
- ✓ Gaia-X principles of openness, portability and transparency
- ✓ Compliance and Privacy by design, certifications (ISO27001, SecNumCloud, HDS, SNDS)

Our solution : a SaaS platform & a highly scalable architecture

...offering turnkey functionalities.

Collaboration

Secure and sealed project spaces with adapted profiles

Governance

Data and Services access control, authorization engine.

Data catalog

Streamlined and secure exploration of data assets

Integrated IDE

Creation, versioning and execution of code (processing, exploration, ML...)

Data Ops

Design, automation and management of jobs and pipelines within Data Flow

Data Visualization

"No Code" reports and dynamic board tables

Our clients : public & private organizations seeking data industrialization and data protection

Confidential Data Pooling between banks

(French supervisory authority)

DataHub to share confidential encrypted data between banks to train and run sophisticated data science models on fraud and money-laundering detection.

Healthcare predictive data analytics

(French hospitals software editor)

Platform to provide hospitals with use cases, dashboard and dynamics visualizations to monitor and predict their activities (HR, Supply, Care Pathways..)

Public – Private Data Sharing

(French Ministry of Tourism)

DataHub to share data between tourism stakeholders to better monitor and predict the activity and work on more sustainable models.

Side DataHub for highly sensitive data

Multi-cloud platform, according to Gaia-X interoperability and portability requirements, to manage highly sensitive data (HR, nuclear plants...)

Our mission

*Democratising and industrialising the use
of data within a framework of trust.*
