

## >> Building your path to the cloud with InterCloud

With InterCloud, you no longer have to be a network specialist to drive a multicloud strategy. By leveraging our experience, expertise, and insight into all aspects of cloud connectivity, we will boost your company's success.

As your business-critical applications are more widely distributed across hybrid IT landscapes, the demand for flexible, reliable, secure, and control predictable paths to multicloud is higher than ever. InterCloud is the Software-Defined Cloud Interconnect (SDCI) provider delivering a secure, end-to-end managed service.

Our API-first platform simplifies and accelerates your network operations, offering enhanced performance and visibility at workload level. As a privileged partner of the major cloud service providers (CSPs), we provide optimized connectivity solutions tailored to your organization's needs. We make the complex task of managing cloud connectivity simple, reliable, and flexible.

  
RÉMY COINTREAU

>> CTO

“ The need for agility between our three public Cloud Service Providers demanded that we turn to a neutral third party, such as InterCloud, to reduce dependency and enable our multi-pronged approach to a more reliable multicloud operation. ”

>> Network Innovation Leader

“ Bypassing the public internet to reach our cloud applications with InterCloud has allowed us to access our key business data privately, thus securing our data and guaranteeing the performance of our critical applications around the world. ”

>> CDO

“ When you make the choice to run a critical application in the Cloud, you need to fully trust the robustness of your network; InterCloud guarantees this performance and high availability. ”

They trust us

Our partners

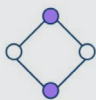

### Enhance service flexibility

Integrate SDCI services into the DevOps lifecycle thanks to their enhanced flexibility and speed of deployment.

### Reach any cloud, anywhere

Seamlessly interconnect a soaring number of multicloud resources and deliver interconnect-as-a-service to users worldwide.

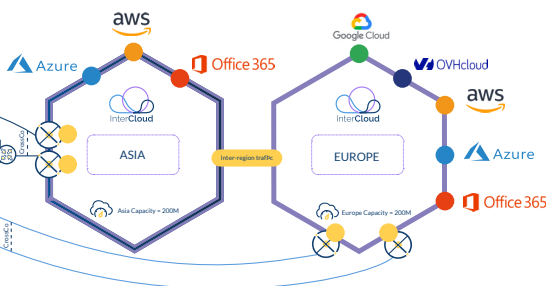

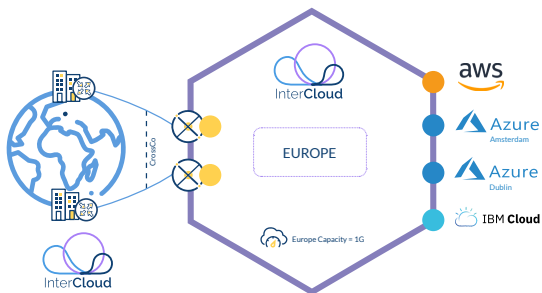

### Rely on cloud networking experts

Benefit from the expertise of our cloud networking engineers to deliver fully managed secure solutions.

## Use cases - Automotive with GSI

## Use cases - Retail

## Use cases - Banking
