

Unique Ultrasonic Technology Secure data transfer in constrained environments

Dominique PALACCI
CEO

How to collect data in extreme conditions without using existing wireless networks and in a secure way?

WE USE
ULTRASOUND
TO SEND AND RECEIVE
DATA OVER
THE AIR

Challenge

- Wireless communication where radio waves are not effective or not allowed
- In constraint environments (explosive, humid, metallic, electrosensitive)

Benefits

- Safe, Harmless
- Highly Secure
- Through existing infrastructures
- Transparent for users

A top-notch technology

- **Wi-Us**
(Wireless Ultrasound)
 - Patented data transfer protocol with exclusive ultrasound modulations
 - SDK and API for mobile apps and embedded systems
 - **The ONLY multiplexing technology in the world**
 - Reliable up to 100m
 - Resistant to jamming, noise, Doppler effect
 - Plug & Play with MULTISONIC card and UDI (Ultrasound Data Interface)

- **WAKEE**
(Ultra low consumption Ultrasound switch)
 - Reduces up to 300x standby consumption
 - Extends battery life by more than 3x

Secure Industry 4.0, IoT and contactless

Measure

Authentication

Data Transfer

Presence Detection

Wi-Us

Secure and
digitalize
procedures in a
nuclear plant

Challenge

- Send and sign procedures wirelessly up to 100m
- In a humid, metallic, electrosensitive environment

Benefits

- Secure procedures
- Quicker for less radiations exposure
- Digitalize signatures
- Less contaminated waste

Solution

- **Wi-U_s**
(Wireless Ultrasound)
 - Patented and secure ultrasonic data transfer without radio waves.
 - Embedded in hardened keyboard and tablet
 - Software for multiplexing calling procedures, check validity and sign digitally.

UMITS

“on demand”
corrosion
testing

Challenge

- Monitor corrosion in dangerous places
- Without scaffoldings
- Without expert intervention

Benefits

- Safer, Quicker, Cheaper
- Nonintrusive measure
- Guarantees infrastructure integrity
- “On demand” testing campaigns

Solution

- **UMITS**
(Ultrasound Measure for Integrity of Tanks)
 - Install the IoT where the measure will be performed.
 - Perform measures with a simple tablet.
 - The measures are synchronized online and are shared with experts for diagnosis.

- **WAKEE**
(Ultra low consumption Ultrasound switch)
 - Reduces up to 300x standby consumption
 - Extends battery life by more than 3x

Secumeter

Alarm with active ultrasonic barrier

Challenge

- Secure lifting environment
- With a personal and contextualised alarm

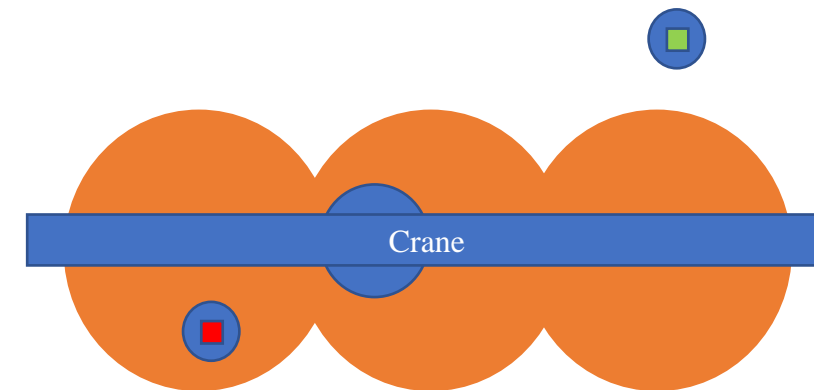

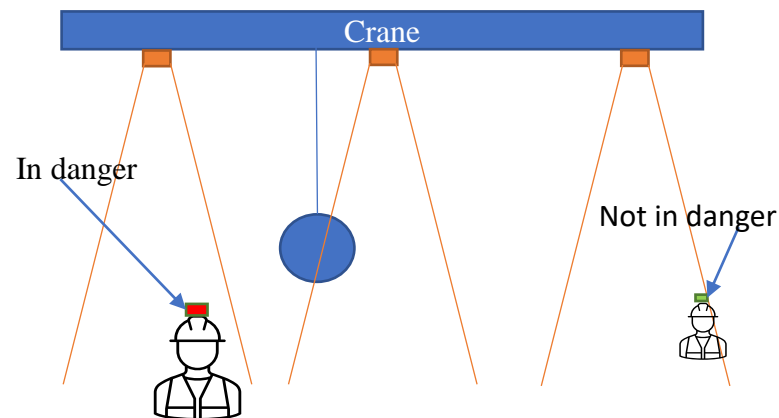

Benefits

- Contextualized alarm
- Personal alert better taken into account
- Increase workers security

Solution

• Secumeter

- The crane is equipped with ultrasonic emitters slaved to the movement of the machine.
- They start emitting when there is a movement, creating a virtual barrier around and under the crane.
- Each worker wears an ultrasonic badge that will emit an alarm if they are in the zone of danger.

UCG

Count staff during emergency alert

Challenge

- To count the staff that enters the assembly/mustering points with a fast, reliable, automated, and digital way during an emergency alert

Benefits

- Automatic, transparent
- Quicker, safer and more reliable than the manual roll call
- No connection needed
- Increases the security of the staff

Solution

- **UCG** (Ultrasound Counting Gate)
 - Assembly/muster points are equipped with UCG system, powered by solar panels, (independent power supply).
 - Staff is wearing a badge with a Wakee switch to save battery life.
 - During an alert, the warning siren emits the ultrasound signal that triggers and switches on the badges.
 - When the staff arrives at an assembly/muster point, the manager sees immediately on a tablet the list of persons who entered the zone, (their ID is detected by the UCG).

WAKEE (Ultra low consumption Ultrasound switch)

- Reduces up to 300x standby consumption
- Extends battery life by more than 3x

UDI

Secure data transfer in an aircraft carrier

Challenge

- Send wireless instructions WITHOUT using radio waves
- In an explosive, humid and metallic environment

Benefits

- Harmless
- Discreet
- Safe and secure
- No electromagnetic interference

Solution

- **UDI (Ultrasound Data Interface)**
 - Sends procedures, signatures, messages, alerts
 - In the corridors, on the deck, in confined places
- **UMIX**
 - Broadcasts through an existing on-board sound system
 - Covers the whole area

HBeacon Geolocate workers during maintenance in a submarine

NAVAL
GROUP

Challenge

- Geolocate workers in a faraday cage
- In an explosive environment
- Easily change location inside the submarine

Benefits

- Operates in any environment
- No need for any wireless network, (WiFi, 4G, Bluetooth)
- Safe and secure
- Easy to install
- Easy to modify

Solution

- **HBeacon badges**
 - Each worker's beacon emits a signal.
- **Magnet UDI (Ultrasound Data Interface)**
 - Each UDI covers a specific zone. The UDI "listens" to the Hbeacon's signature and sends it to the UDI at sight.
 - The location of the worker is received by the supervisor who is standing in the main office outside the submarine.
 - When the place changes, UDI's position also changes. The zone is updated.

UDI

Monitor ammunitions remotely

Capgemini 

Challenge

- Monitor ammunitions remotely
- In an explosive and electro sensitive environment
- In a safe and secure way

Benefits

- No wireless connection is necessary
- Safe and secure
- Remote inspection, (no need to take a tour)
- Information on demand

Solution

- **UDI** (Ultrasound Data Interface)
 - Ammunition boxes are plugged to a UDI to transfer their status on demand.
 - UDIs are installed and send requests to each box.
 - The data received are send through a secured cable to the network.
- **WAKEE** ultrasound switch
 - To save energy the UDI boxes are equipped with our unique WAKEE switch, an ultra low consumption system. They remain in a shut down mode and only when used automatically are switched on. With this way the batteries will last for years before their replacement.

NSWeight

Estimate the load
of a truck for
overload alarms

Challenge

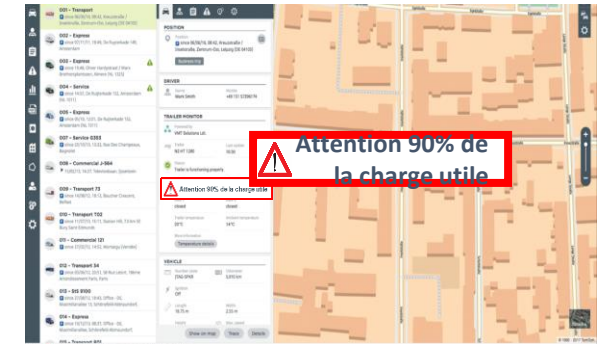

- Alert the driver when there is an overload
- Monitor the use of the truck
- Send load information to the fleet manager

Benefits

- Secure the driver
- Secure the goods
- Help fleet manager for maintenance and precise carbon declaration

Solution

- **NSWeigh with Nomadic Solutions**
 - Waterlight ultrasonic telemeter to measure distance to the road and derive the load
 - Inboard app to alert the driver and send the data to the fleet manager.
 - Back Office to follow the fleet.

Security

Access control ● Authentication

Wi-Us

Offline access
control secured
by blockchain

Challenge

- Secure access control with blockchain
- Without connection

Benefits

- Works without connection
- Highly secured access grant management
- Resistant to hacking
- No need to manage badges

Solution

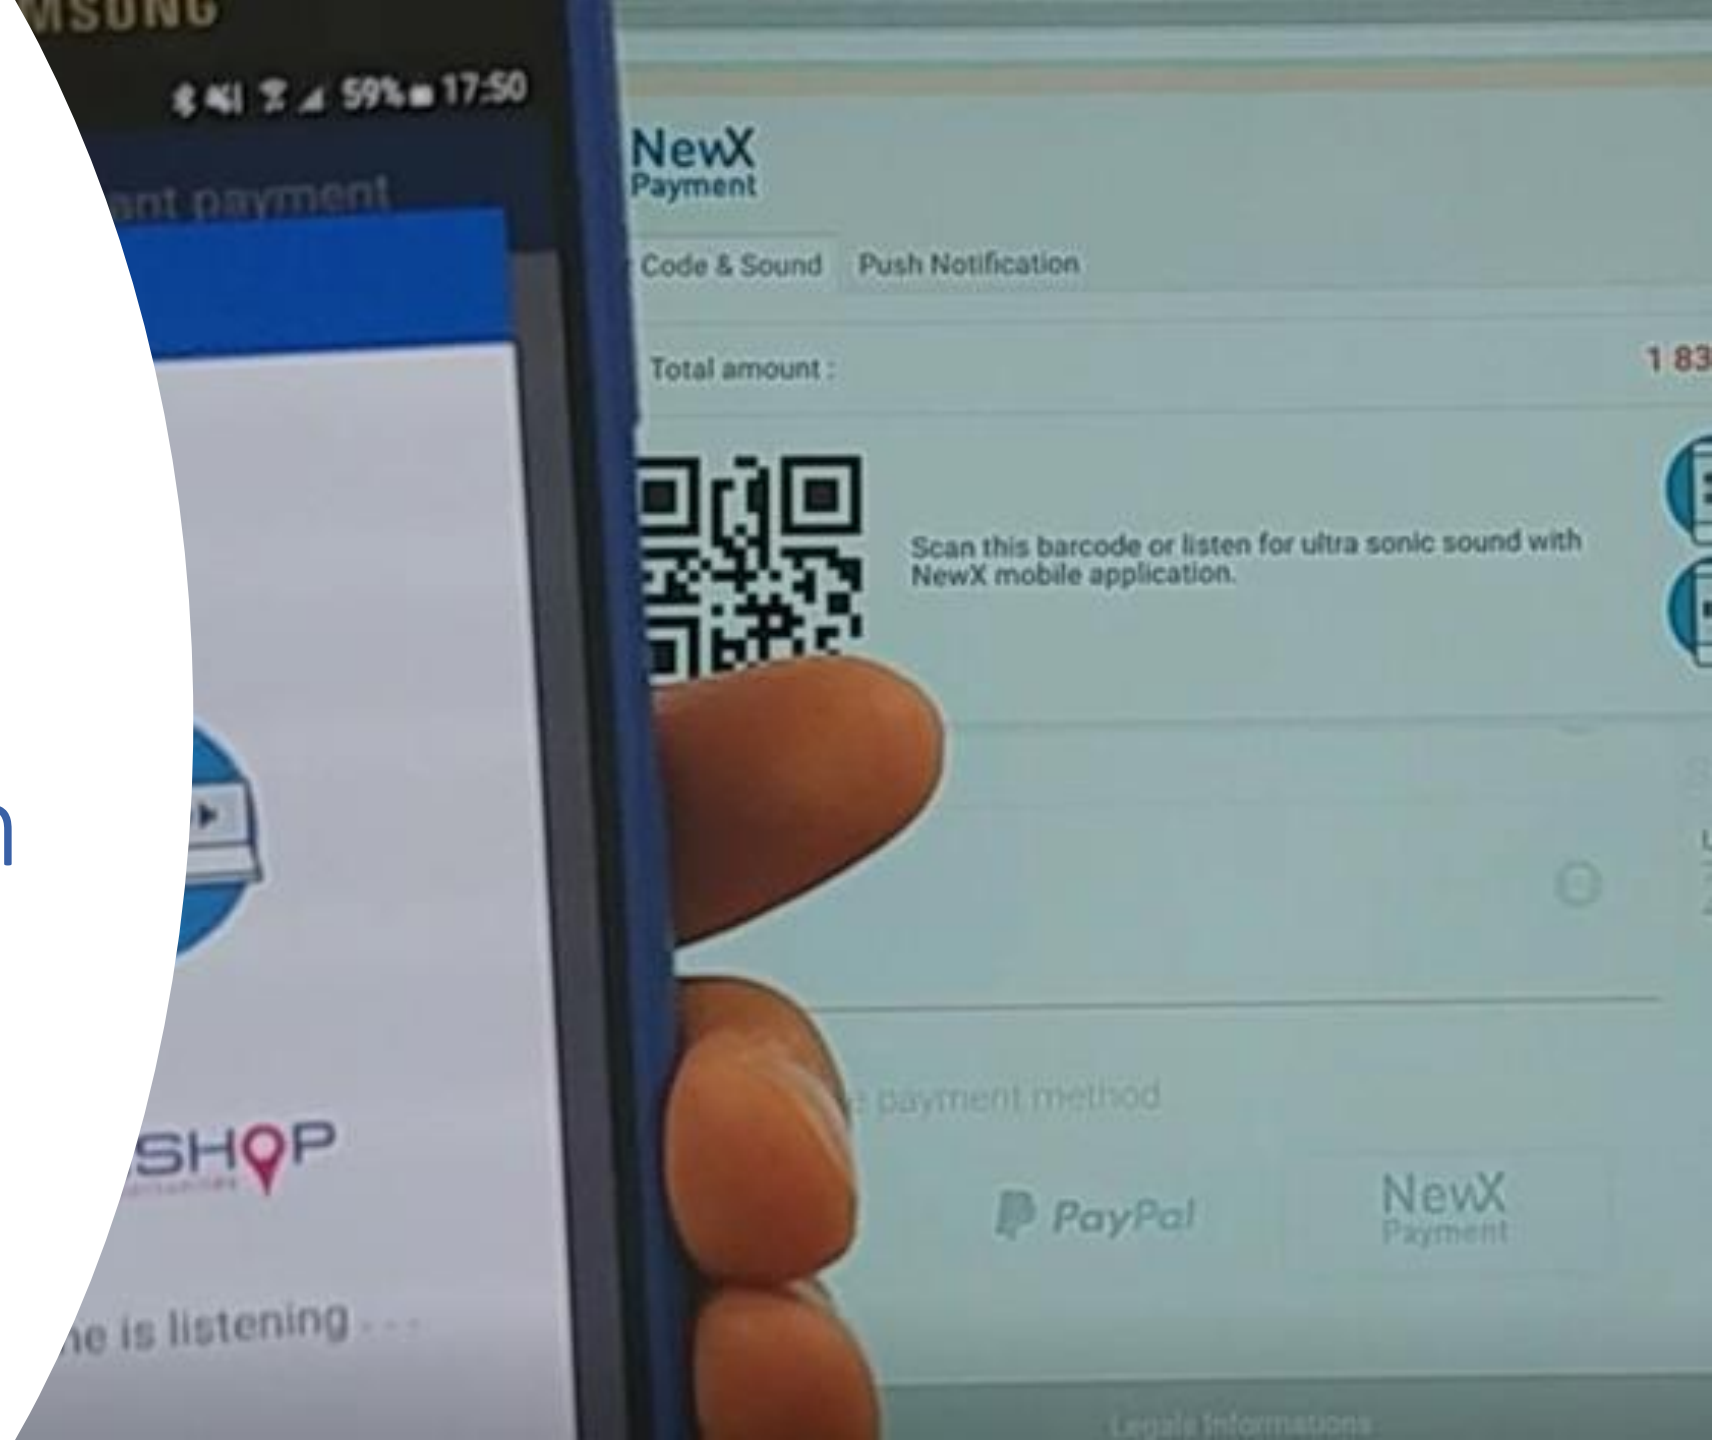

- **Droon** blockchain
 - Access grant is confirmed in a blockchain.
 - Public and private keys are separated.
 - A local challenge makes each interaction unique.
- **Wi-Us** data transfer
 - Smartphone emits the token.
 - UDI decodes the key to grant access.

Wi-Us

Highly secure authentication

worldline
e-payment services

Challenge

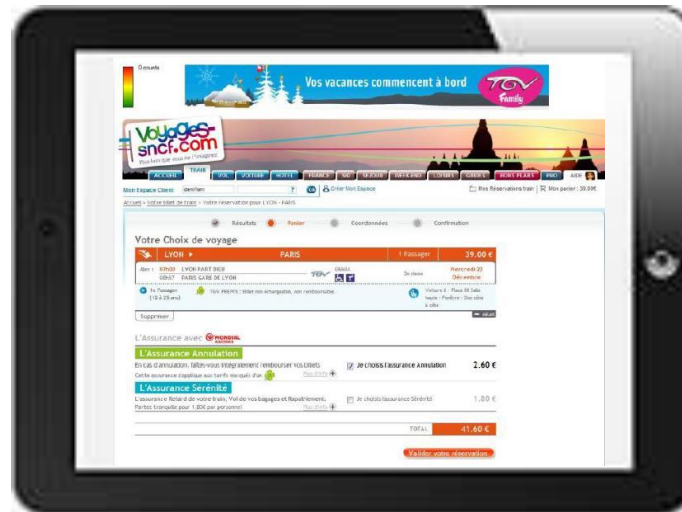

- Validate payment in no time
- Even without connection
- In a very secure way

Benefits

- Works without connection
- Very quick procedure
- Transparent for the user
- Resistant to hacking
- Highly secured

Solution

- **Wi-Us data transfer**
 - Instead of receiving a text message with a code to type to validate a payment, the banks and the website (or the cashier) are exchanging a validation code locally, with ultrasonic signals, without connection.

Wi-Us

Ultrasonic key to
unlock the car
with a
smartphone

NOVA CAR 2

Challenge

- Unlock the car with a smartphone
- In a secure way
- Without radio waves

Benefits

- Works without connection
- No hacking around
- Share a digital key with the app

Solution

- **Wi-Us**
 - Generate a unique token in the app.
 - Send it with ultrasonic signals via smartphone speaker
 - Receive and decode the signals in the door, resolving the unique challenge
 - Send instruction to unlock the door

Digital Services

Interactive venues ● Events ● Disability

UMIX

Transcribe vocal
announcements
into notifications
on smartphone

Challenge

- Help hearing impaired to get the vocal announcements

Benefits

- Easy solution to install
- Universal solution on smartphones
- Top service for hearing impaired in a noisy environment

Solution

- UMIK
 - Wi-Ub SDK is embedded in the app.
 - What is said on the speaker is transcribe into ultrasonic signals and mix into the sound system with UMIK.
 - The app writes down the notification on smartphones in the area.

HBeacon Fluid interactive visit

Challenge

- Display contextualized contents during the visit in the app

Benefits

- Easy solution to install
- Fluid and transparent for the user
- No radio waves pollution

Solution

- **HBeacon**
 - Each point of interest is covered by an ultrasonic signal with a HBeacon, creating an interaction zone.
 - When the visitor is entering the zone, the app will display the comments linked to this place.
 - Possibility to get visit statistics, like a physical cookie.

UMIX

Synchronize
smartphones
during an event

Challenge

- Interact with a large audience during an event.

Benefits

- No connection needed
- Compatible with any smartphone
- Live and contextualized interaction
- Guaranteed emotion

Solution

- UMIK
 - Send ultrasonic signals through the sound systems.
 - Every spectator with the app in the audience will get the interaction scheduled (notification, link to a video, light show, loyalty points...).
 - Even with no connection.

**Smart
Energy**

Decarbonation

Save energy ● Increase batteries' life ● Decrease waste

WAKEE

Save standby
mode energy

somfy®

Challenge

- Switch on and off device to save standby mode energy with an ultra low consumption system

Benefits

- Divide up to 300x standby mode consumption
- Multiply by 3 batteries' life
- Decarbonate 1 to 3 billiards tons of CO2

Solution

- **WAKEE switch**
 - Ultra low consumption electronic card to be integrated or connected to power supply.
 - On and Off ultrasonic signal to be played by any smartphone or remote control

Digital Marketing

Contextualized notifications ● Loyalty ● Wait management ● Geolocation

Ucheck.in

Local second screen on smartphone

Challenge

- Interact with a display on a smartphone
- Without connection nor pairing

Benefits

- Increase consumer commitment
- Give value to the app
- Extend impact of the video

Solution

- **Ucheck.in**
 - Ultrasound signals are mixed in the content of the display.
 - They push interactive contents on the mobile app as a « second screen ».
 - Customers go back home with local content.

UMIX

Waiting Management through app and sound system

BRICO **MARCHÉ**
Pouvoir tout faire **Moins cher**

Challenge

- Alert the consumer when its his turn to be served

Benefits

- No queuing
- Easy to install
- Win Win service
- Increase the ticket

Solution

- **UMIX**

- Instead of taking a ticket and wait for their turn, consumers type the number in the app.
- They keep on shopping in the shop.
- Numbers are broadcasted through the sound system via ultrasonic signals not audible.
- Consumer is alerted when it's his turn to be served.
