

**Let's add trust
to web3
fundraising!**

Over **\$26b** has already been lost to scams and rugpulls in Web3! There remains a significant **lack of certainty** in Web3 fundraising.

Create trust with DAO
functionality

Add NFT trading
capabilities

A launchpad that
creates confidence
in new, ambitious
projects

A platform where users can buy **Community Passes**, with the funds only being unlocked after pass holder approval.

How it works

It's really that easy!

1

Project setup

The project team sets up the stages and the amounts locked per stage. Also the perks are added to the Community Passes.

2

Community Pass

As a user, you'll be able to buy a Community Pass for the selling price determined by the project. After purchasing it, you'll have access to its perks straight away.

3

Funds are locked

The raised funds are locked up in a smart contract. The project has defined how much of the funds are released up front and how much is locked in each stage.

4

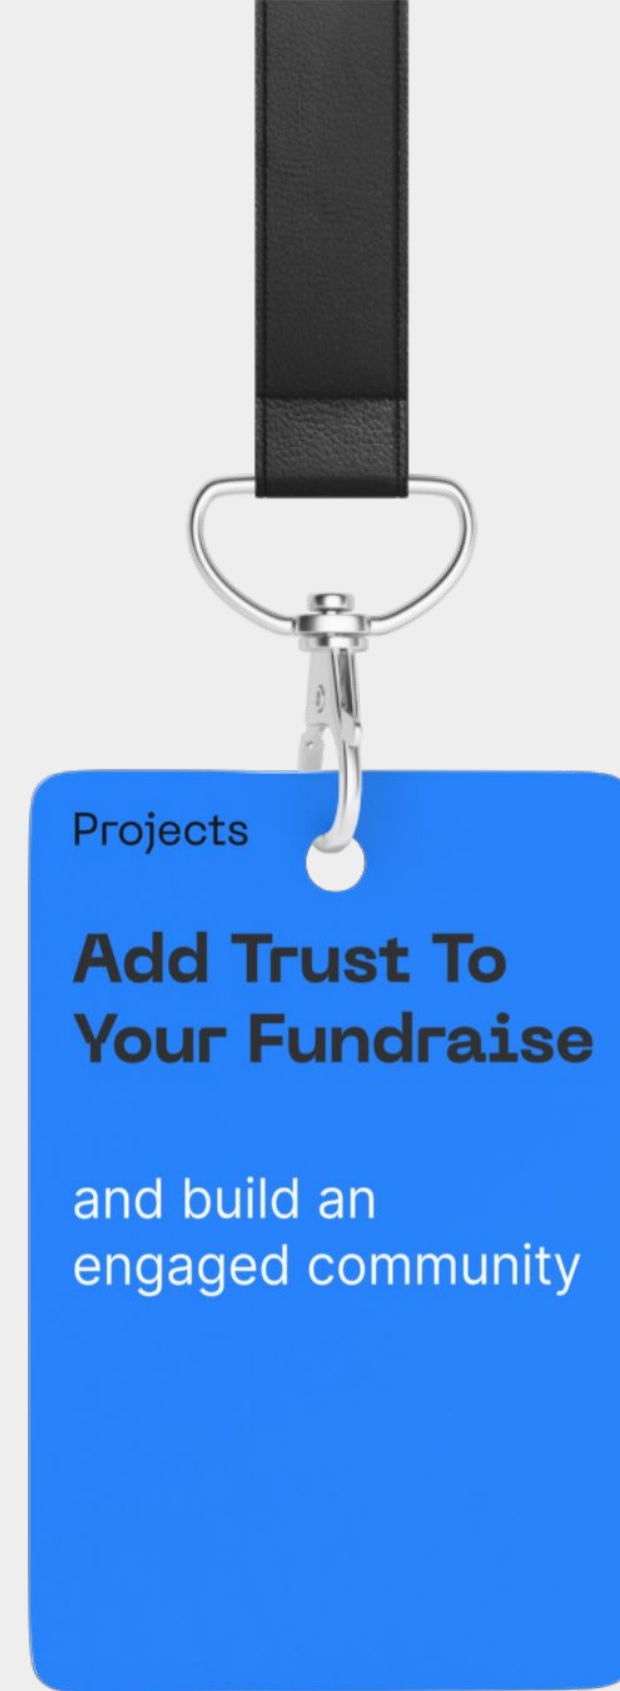

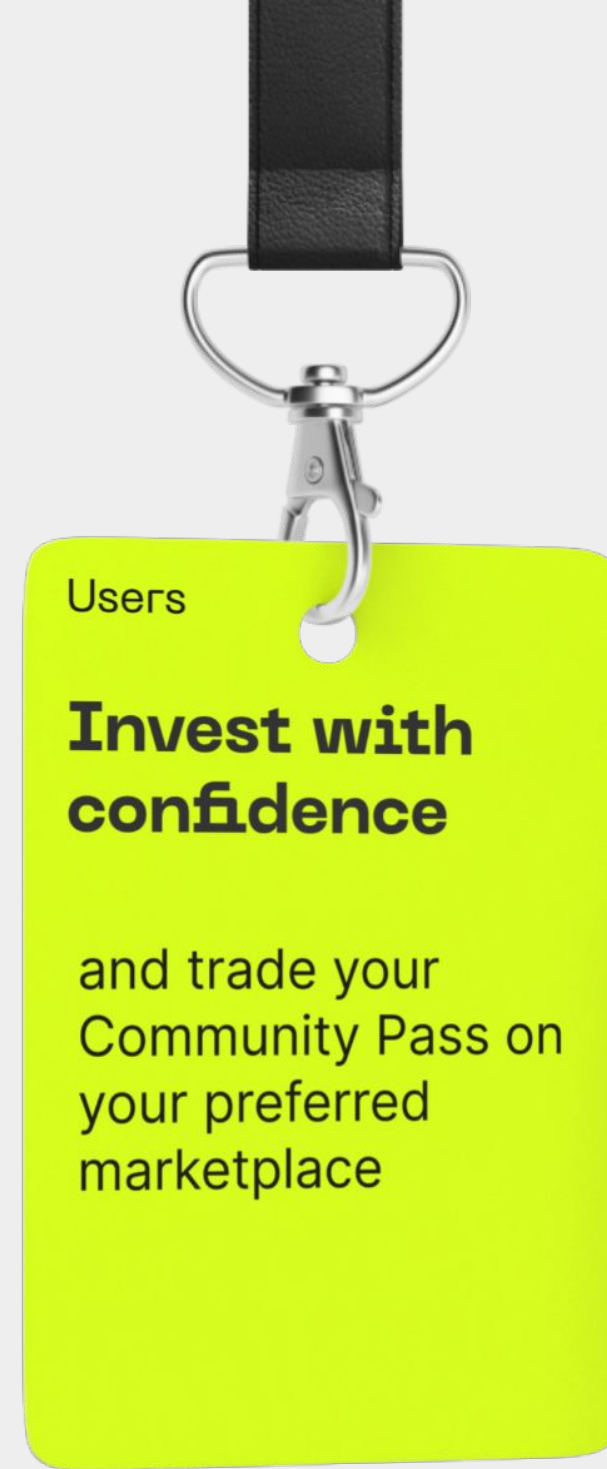

Vote to unlock

The project activates the vote once a stage is completed. Pass holders can now vote on whether the project delivered the stage as promised.

A two-sided platform built on the values of **trust** and **tradeability**.

A great way to invest

Get Control

Get control over the project you invested in. Each Community Pass gives you a vote whether to unlock the raised funds to the project.

Unique Perks

A Community Pass gives you unique perks, related to the project you invest in.

Ability To Sell

Want to make a profit on your investment? Easily list your Community Pass on the marketplace of your choosing.

Be Part Of Community

Community Passes give projects a great opportunity to build out an engaged and vibrant community.

This is how we're different

	TRADEABILITY	CONTROL OVER PROJECT	EASY TO BUY & SELL	PART OF COMMUNITY	NFT TECHNOLOGY

Colecti					

An experienced, multi-disciplinary team

Lukas Bronsvoot

Raphaël Cornelis

Sander Mandemaker

Jurre Machielsen

A PROVEN TRACK RECORD

The Colecti team has all necessary skills and knowledge to build and scale a blockchain tech company.

Active since 2017 in blockchain, the team has delivered multiple prototypes (recurring payments, ticketing, DAO) and successfully launched a blockchain explorer ([Liskscan](#)).

The team combines expertise from both inside and outside the crypto sphere, building on proven experience in full-stack development, web design, community building, e-commerce, online marketing and innovation management.

We are looking for a
€800k investment
in Q4 2023

What we did

01

Preseed €500k

02

Token sale
community round
>600 participants -
\$300k invested

03

Built Marketplace and
Launchpad on Lisk

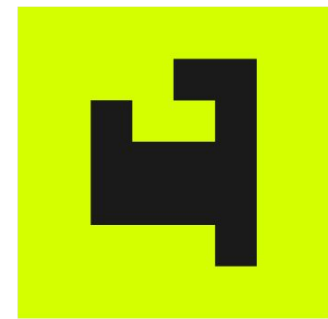

What's next

04

Scale marketing team
& attract EVM
developers

05

Move to multi-chain.
Connecting the
Launchpad to
Ethereum and Solana.
