

Trust as a Service

Company Profile

TrueScreen is the cybersecurity solution that certifies digital content with legal value, guaranteeing its **authenticity** and **immutability**, with the goal of preventing fraud and misinformation.

We increase the quality and speed of information processes by enabling companies, professionals and individuals with proprietary technologies that are easy to integrate and comply with the international guidelines (eIDAS, GDPR, ISO).

TrueScreen addresses the problem of the **unreliability** of information on which economic and social relationships are based upon.

This unreliability is caused by the combination of two rapidly rising trends: the wide availability of softwares that allow easy manipulation of the meaning of any digital content (deepfake AI, editing apps) and the extensive use of mobile devices as a tool for capturing information (94% of files are generated from smartphones and tablets).

By using mobile applications (iOS and Android), TrueScreen analyses, certifies and preserves the integrity of photos, videos, screenshots and audio recordings; within seconds, the app generates a **legal technical report** containing data and metadata of the acquisition context (geolocation, network addresses..) of the analysed files.

In its **Business Solutions**, TrueScreen provides a suite of services useful for the complete management of document flows, ensuring:

- Content integrity analysis and certification at the source
- A simple management of acquisitions through a dedicated web **Portal**
- Secure cloud storage
- An agile integration with corporate information systems

Mission

TrueScreen's mission is to **restore trust** in digital communication by providing everyone with accessible technology to stop fraud and misinformation and speed up data management in any social or economic relationship.

Vision

TrueScreen aims to be the **new standard** for the acquisition and management of indisputable evidence.

The Company

TrueScreen is a registered trademark in Italy.

Foundation date: February 2021

Patents: 1 international / 2 national
