Power Strip
for Electric Cars

Aqueduct - The Power Strip for Electric Cars

power connection

11 or 22 kW

start module

The start of every ChargeX charging system and the first charging point.

extension module

Up to 9 additional charging points per charging system possible.

Fast installation = minimal installation costs

extension

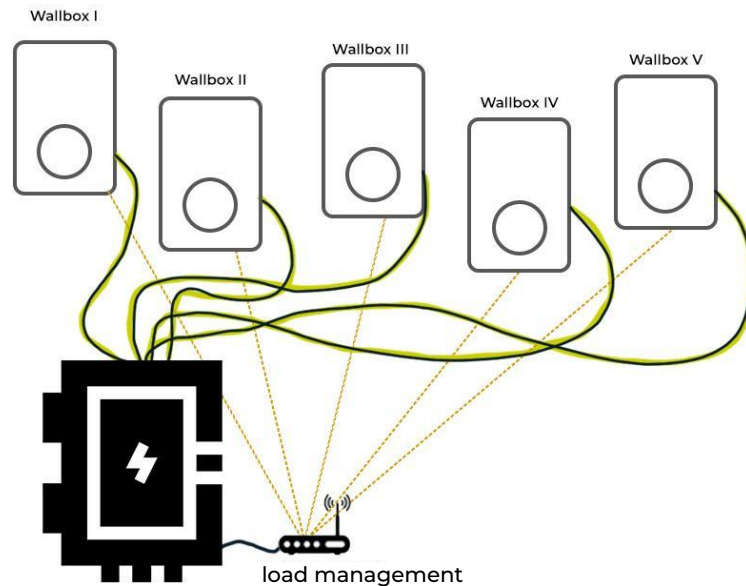

The charging system grows with the number of electric cars.

Thanks to Plug&Play an extension module can be installed in 60 seconds.

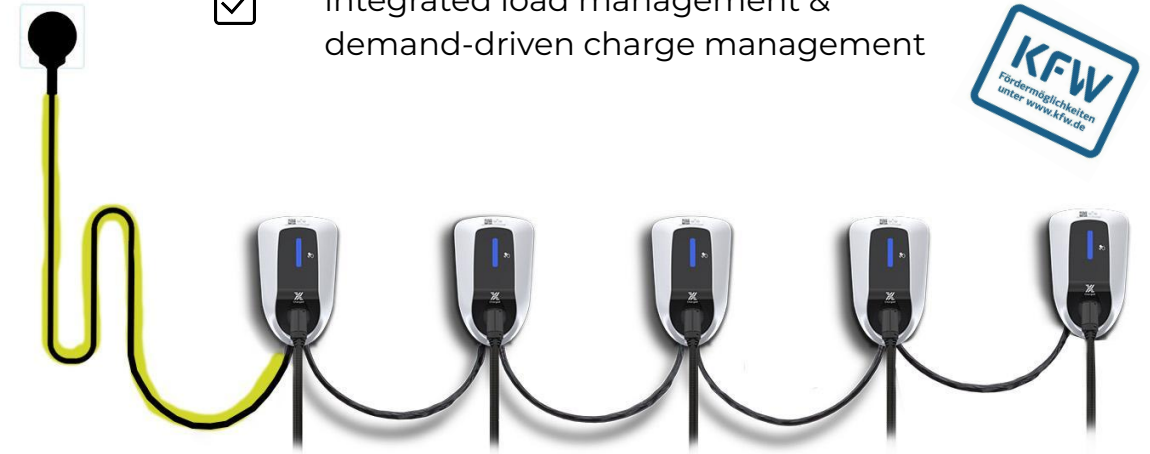

Aqueduct - The Power Strip for Electric Cars

conventional installation

- ⚠ 1 supply line per charging point
- ⚠ 41% KfW funding rate due to high installation costs (only DE)
- ⚠ Additional load management necessary

- ✓ 1 supply line = X charging points
- ✓ optimized KfW funding rate of 70% (only DE)
- ✓ integrated load management & demand-driven charge management

Due to the simple installation
**ca. 50% of the installation costs
can be saved!**

How is the
charging current
distributed?

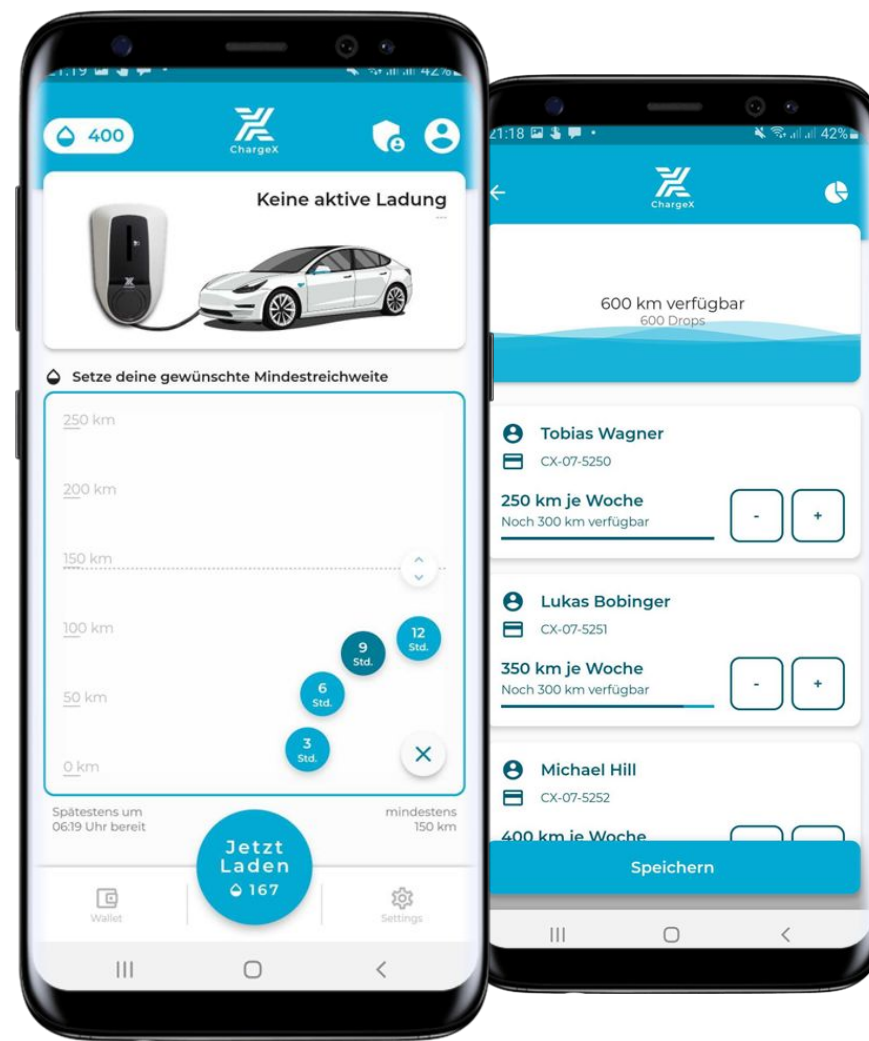

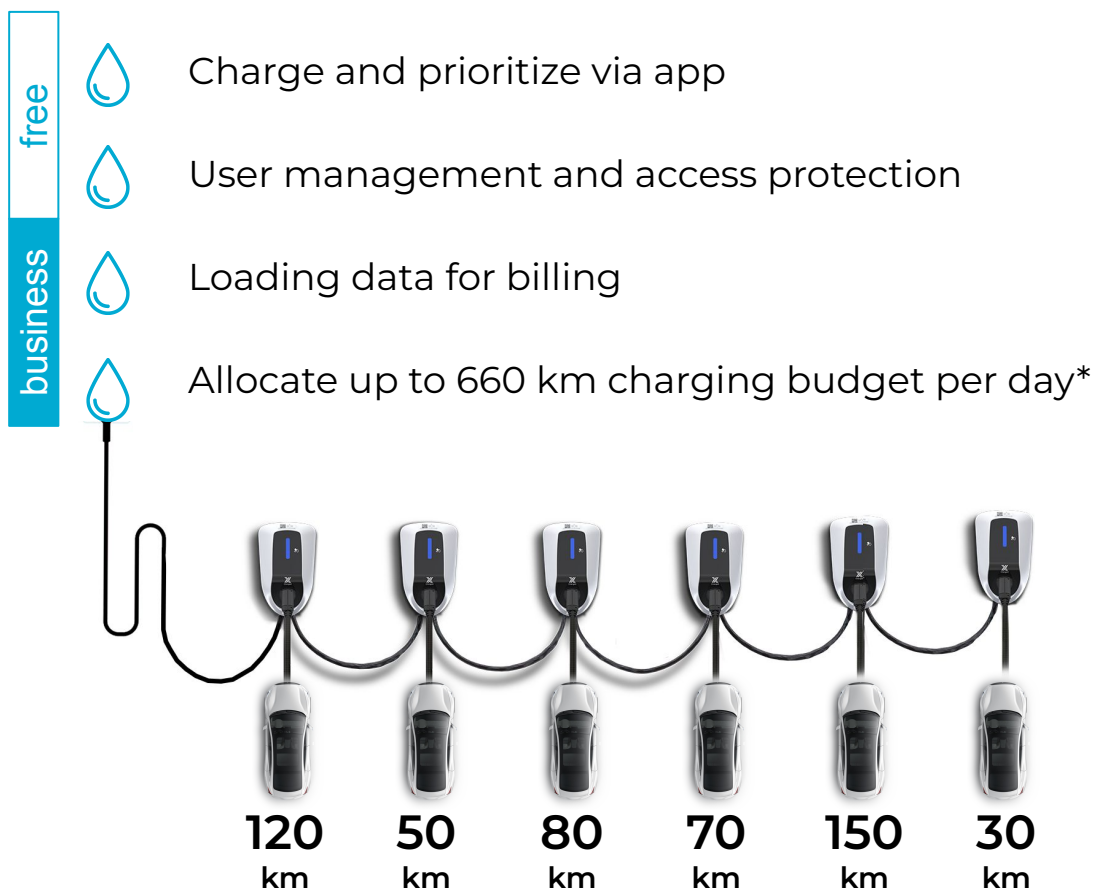

ChargeX Drop Power Sharing

A sufficiently
charged battery at the
right time.

Drop Power Sharing

The app for optimal charging current distribution and billing

Details: www.chargex.de/power-sharing

*Example: 11 kW, 20 kWh/100 km consumption, 12h charging time (first to last user)

Want to take off?

You have more
power available?

Solution:

**A lot of
power strip!**

Do it like:

Business Campus

Garching

charging points: **64**

charging systems (=start modules): **18**

Harman International

Karlsbad

charging points: **30**

charging systems (=start modules): **12**

mercartis GmbH

Ulm

charging points: **25**

charging systems (=start modules): **7**
