Comfort Cow

Enhance welfare and  
increase milk production

# Cherish your cows!

You ensure a healthy and productive herd every day, Comfy cow brushes can help you do just that. Cows love to use our brushes!

Comfy Cow brushes contribute to the well-being and health of your animals and that ensures increased milk production and productivity.

## Comfort Cow

Distinguished by its large brush surface and the hinge movement. This allows the cow to brush her back, head, tail and flank for optimal brushing. This innovative design also enables the Comfort Cow to access areas that the cow might struggle to reach on her own. The brush removes dirt from the cows and contributes to their well-being.

Our commitment revolves around delivering a durable product that you can rely on over an extended period. We achieve this by incorporating a left and right rotation feature, which effectively prolongs the brush's lifespan. This rotation mechanism prevents the bristles from consistently facing one direction. Each Comfort Cow can accommodate a population of 50 to 60 cows, with these cows utilizing the brush for an average of up to 18 hours per day.

## Technical information

Brush frame dimensions	1060 x 390 x 1450 mm
Brush diameter	∅ 390 mm
Brush length	780 mm
Power Supply Type/ Mains current	110V 60Hz / 230V 50Hz
Power usage	0.12kWh
Weight	50kg
Brush rotation speed	58 rpm
Movement	Hinged
Direction of rotation	Clockwise / anti-clockwise

## Basic and Premium

The Comfort Cow brush is not only available in the premium version shown, but also in a basic version. In that version, the brush is not driven by a motor but by the animal itself. Our clever design allows the cow to turn the brush in one direction by rubbing against it. Turning back is blocked for optimal brushing effect.

DESIGNED AND  
PRODUCED IN  
THE NETHERLANDS

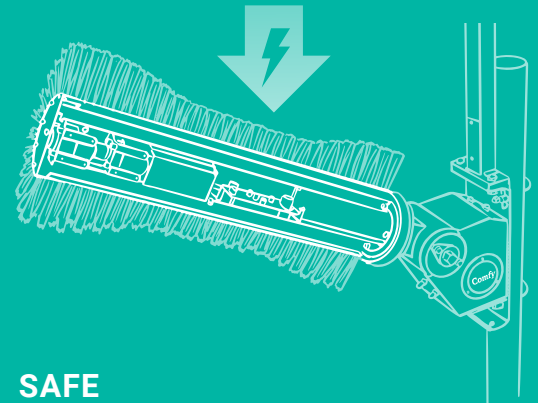

## LOW ENERGY CONSUMPTION

Due to our efficient 24V, 3 phase motor, Comfy brushes have a low energy consumption.

  
No load  
operation  
0.04kWh

  
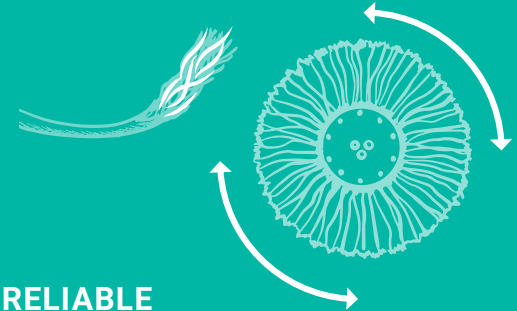

Normal  
load  
0.12kWh

  
Maximum  
load  
0.3kWh

## SAFE

Thanks to our overload protection system, the tail automatically detaches from the brush by rotating in the opposite direction.

## RELIABLE

Our cow brushes run for 18 hours on an average day and they are supposed to do this year after year, without maintenance. We are so confident in our reliability that we offer a 3-year warranty.

## EASY ASSEMBLY

Our brush is plug and play. The brush is relatively light (only 50kg) and is modular, which makes assembly much easier.
