MANUFACTURE EN FAMILLE offers a unique experience. Do you remember who held your hand to achieve your first chocolat cake or to set up your first fishing rod ? A moment of closeness, complicity and shared knowledge between family members.

OUR VALUES, OUR VISION

HANDS... WHERE TRUE EDUCATION BEGINS!

In an increasingly virtual and digital world, « hands-on learning » can play a pivotal role in a child's development, allowing them to become more independent, develop their sense of work ethic, and increase their self-confidence.

Dr. Maria Montessori, founder of the Montessori teaching method, said that "The hand is the instrument of intelligence." In her educational philosophy, the learning process requires assimilating knowledge through the body.

By using their hands, children develop their creativity, fine motor skills, knowledge, and independence...as well as their desire to learn.

MADE IN FRANCE

MANUFACTURE EN FAMILLE's products are designed and manufactured in France, based on components sourced as much as possible in France and Europe.

THE JOY OF SHARING KNOWLEDGE

Great satisfaction can be derived from passing down useful knowledge and skills to future generations.

At MANUFACTURE EN FAMILLE, we want you to discover the joy of participating in your children's progress, of witnessing their ingenuity, and of seeing how proud they are of the result.

BEAUTIFUL AND MADE TO LAST

In a world where everything goes out of style and wears out so quickly, it is important to create childhood treasures, precious objects that can be handed down with pride to future generations.

Our objects are long-lasting treasures because they are beautiful, stimulating, and timeless.

ECO-FRIENDLY: SAFE AND DURABLE DESIGN

To reduce our environmental impact, we are trying to use local suppliers for our products.

RESPONSIBLE: SUSTAINABLE DEVELOPMENT

Because the safety of your children is a priority for us, the wood from our products comes from sustainably managed European forests. The glue we use is safe for use in schools ...

WHO ARE WE? A HISTORY OF MANUFACTURE EN FAMILLE

“Married for 25 years to a technology and creation-obsessed husband, both of us engineers, we raised four children while also experiencing innovation-filled careers. It was a natural progression. We started by making objects for our children, and then one thing led to another: they asked us for more toys, and then they helped us make their own toys.

Over the years, the importance of spending quality family time together became a necessity. The joy of making things together created strong bonds between us parents and our children, and between the children themselves. As they grew up, they became more and more imaginative, full of ingenious tips and good ideas. We had created a real family culture.

Experiencing all these little victories gave our children the desire to take the next step. The manual construction activities we shared with our children opened the door to knowledge, independence, and the pleasure and desire to learn.

That said, all these benefits wouldn't have been possible without countless series of mistakes, half-finished projects, and many discarded objects: parenting is difficult! Despite it all, these special bonding moments became our children's building blocks for becoming happy adults with heads full of memories and brimming with creativity for the future.

Our family adventure gave me the desire to share with others these quality family moments: moments of bonding, creativity, and the transfer of knowledge, resulting in a beautiful and long-lasting object.

From experience, I discovered that to keep little ones motivated, they must be rapidly satisfied and able to start immediately without losing preparation and supply time. Forget good ideas that start well but end badly, from a lack of material, time, or patience.

Another essential point to which I pay careful attention is progressive learning, one step at a time. The amount of learning must be reasonable and measured so children will not be discouraged.

I instill in MANUFACTURE EN FAMILLE my passion to offer everyone the possibility to learn to share, create, and personalize educational toys, little furniture, or accessories...all with an elegant result.

MANUFACTURE EN FAMILLE provides with each product a fun learning experience with rapid satisfaction. You will make your own tools; and all the necessary supplies are included. In the kit are illustrated instructions that explain how to construct the object, and more importantly, how to have them constructed by children.

You will see how much children become attached to and respect what they make with their own hands!”

Elisabeth.

HIGH-QUALITY MATERIALS

To create elegant products from beautiful and authentic materials, MANUFACTURE EN FAMILLE currently proposes objects made of wood, leather, and felt.

THE FINAL RESULT

The results of 1-3 hours of shared joy, hysterical laughter, and learning are:

- Educational toys from many different worlds:
 - The Roman world
 - Feudal Japan and samurais
 - The Middle Ages and knighthood
 - The realm of fairies
 - Automobile racing throughout the ages
 - The traditional toy world
- Furniture
- Gifts for adults

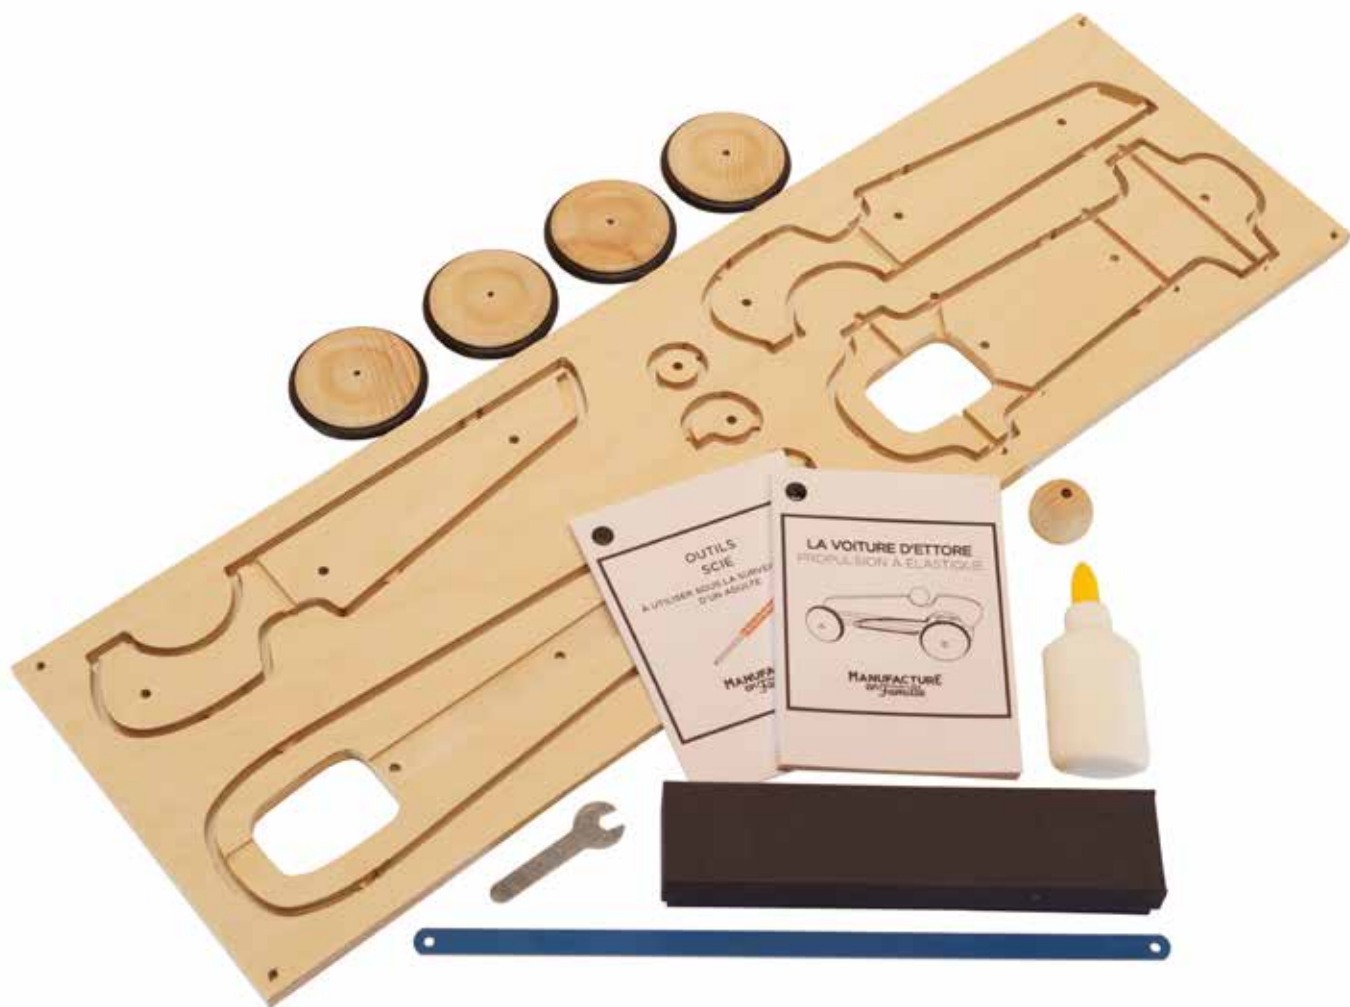

FABRICATION METHOD

We draw up, design, and make our MANUFACTURE EN FAMILLE products in our home in Toulon.
