

The Dopper Water Tap

Designed to change behaviour

A tap that talks and celebrates.

The Dopper Water Tap offers a unique refilling experience. An interactive LED display is integrated in the droplet shaped interface. The Droplet communicates with the users, displaying over 200 positive messages that motivate them to refill their bottle or glass.

A tap that measures.

Your Dopper Water Tap measures how often it's used. This data is transferred to your personal impact dashboard, where you can see:

- Liters tapped,
- The amount of plastic waste reduced in kilograms,
- The number of single-use plastic water bottles reduced,
- The amount of CO2 reduced.

A tap that stands out.

With its award-winning and iconic design, the Dopper Water Tap is available in 8 unique colours and can be personalised by adding your organisation's logo. By offering the Dopper Water Tap as a service, you can attract additional foot traffic to your location. It's also possible to add a filter to enhance the taste of the water.
