# Work better

SOVEREIGN AND SECURE COLLABORATIVE SUITE\*

\* SecNumCloud ANSSI 2025 qualification objective

# Contents

## **Discover Wimi!** --- **04**

Wimi is a secure, sovereign collaborative suite (SecNumCloud objective 3.2. ANSSI 2025), Winner of France 2030 and French Tech 2030, which offers an alternative to North American solutions, while protecting the sensitive data and projects of our public and private organizations with state-of-the-art cybersecurity best practices.

## **Wimi features** --- **06**

Wimi brings together all the essential modules for teamwork on a single platform: workspaces, internal communities, chat & channels, email, documents & drives, tasks & Gantt, electronic signatures, reporting & activities, agendas & meetings, video calls and security features (end-to-end encryption, digital watermarking, MFA...).

## **Safety at Wimi** --- **26**

Wimi aims to achieve ANSSI SecNumCloud 3.2 qualification in 2025. With the cyber threat high and increasingly sophisticated, the choice of a secure, sovereign cloud solution represents a major strategic challenge for public and private players alike. With this in mind, ANSSI has set up the SecNumCloud security standard, which guarantees the highest level of security and technical protection in the world.

## **Wimi and the planet** --- **34**

At a time when energy savings are essential to meet the challenges of the 21st century. To the need for energy sobriety and the absolute priority of reducing our carbon footprint, Wimi aims to play a key role through its technological choices and the positive exogenous impact of its use by its customers.

# Discover Wimi!

## Words from the founders

Wimi's ambition is to offer private and public sector players the European, sovereign and secure alternative for digital collaboration.

Indeed, digital security and sovereignty have become strategic issues for governments, businesses and organizations in general. In France, and for a growing number of states in Europe and around the world, it is a matter of protecting vital interests. Armies and the industries that equip them demand autonomy and protection for their digital exchanges. In the civilian sector, companies and local authorities are discovering the dangers of excessive dependence on the majors.

From this ambition flow Wimi's 3 priorities.

 Reconciling protection and user performance. What good is a sovereign, ultra-secure system if it's virtually unusable, slow, outdated and ultimately bypassed by users in a hurry? With Wimi, we're proud to offer the collaborative suite preferred by users, and continuously improved in response to their feedback. Our customers benefit from productivity gains, reduce the environmental footprint of unnecessary travel, meetings and e-mails; exchanges between remote teams become fluid; team commitment in project mode is encouraged; centralized control is both discreet and powerful.

 The challenge of scalability, to cope with rapid growth in demand. Our new infrastructure has been designed to meet this challenge and support our customers in large-scale deployments.

 The security challenge. In close collaboration with ANSSI and recognized experts, we have chosen the software and hardware architecture to offer state-of-the-art digital security based on the SecNumCloud reference framework. For organizations handling sensitive data, the Wimi Armoured offer goes even further, with enhanced features including Restricted Diffusion.

We have pledged to build France and Europe an alternative for solid, secure, sovereign digital collaboration. With the constant support of our stakeholders, governments and financiers, the total commitment of a team as motivated as it is talented, and the trust placed in us by our customers, we are able to deliver on our promise.

We'll get there.

Lionel Roux, CEO

Antoine Duboscq, Chairman

Organizations

\* Objective 2025

### Workspaces

Group all your projects and activities into workspaces and maintain a global view of your organization.

### Internal communities

Create communities that engage and retain your employees, and streamline communication within your organization with a social network for your business.

### Chat & Channels

Via instant messaging, organize your team discussions in dedicated channels and never lose sight of context and purpose. Less e-mails, more clarity.

### Video calls

Make audio/video calls, share your screen and keep in touch with your teams, wherever you are.

### Documents, Drive

Store, share, edit and co-edit all types of documents, with the assurance of always having access to the latest version wherever you are.

### Tasks & Gantt

Create tasks, assign them in one click and track their progress in Kanban mode or from a Gantt. Simple and efficient.

### Agendas & Meetings

Visualize key project milestones, dates and deadlines, while keeping an eye on your teams' schedules and availability.

### Wimi Inbox & Mail

Boost the power of your professional e-mail with a secure, sovereign solution and innovative integration into Wimi workspaces.

### Wimi Sign

eIDAS-certified, quickly generate secure, user-friendly electronic signatures, with two signature levels and modes, directly in the Wimi suite.

### Reporting & Activities

Track project progress, team performance and workload, and keep a history of all actions.

### Wimi Tattoo

Share your sensitive documents with complete peace of mind. With file watermarking, you can quickly and accurately identify the source of any leaks and minimize the associated risks.

### Security

Best practices in cybersecurity with its SecNumCloud3.2 qualification, end-to-end workspace encryption, digital watermarking of files, and Wimi MFA.

# Features

# WIMI

“

*Wimi enables us to facilitate communication between staff and players, streamline data sharing and speed up the planning of our sporting events. The budget is also very attractive in view of the functional, rich and ergonomic scope covered by the solution.*

**Business chat software: Communicate easily!**

Centralize and organize discussions in instant messaging channels.

With Wimi Chat, you can organize team exchanges in project chat channels, or send private messages to a specific user. In just a few clicks, you can share files, links and photos related to your team's activities. And to increase interactivity and humanize your exchanges, react with emojis.

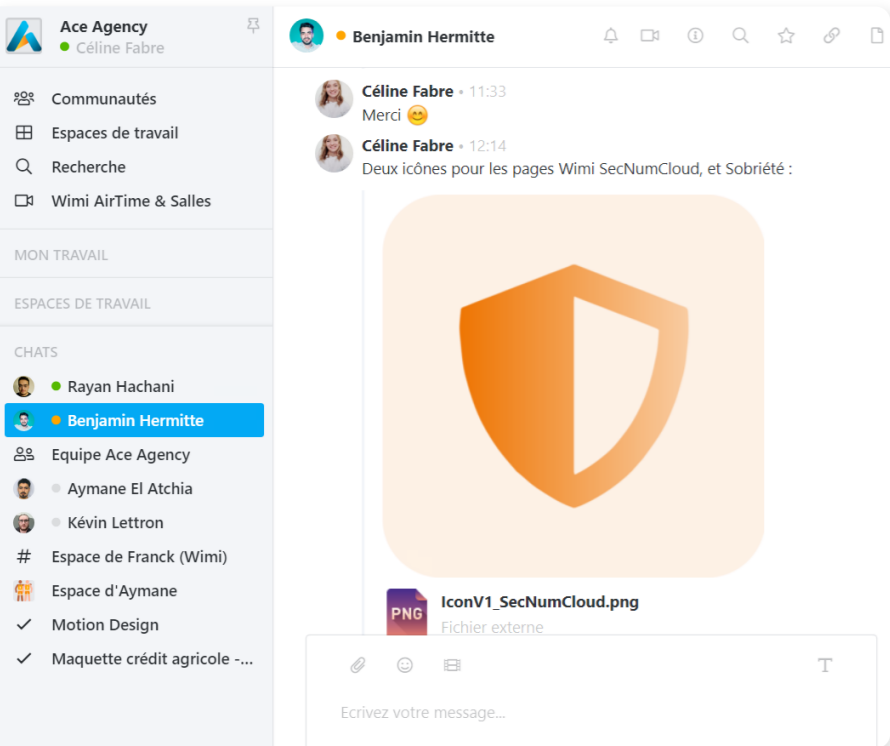

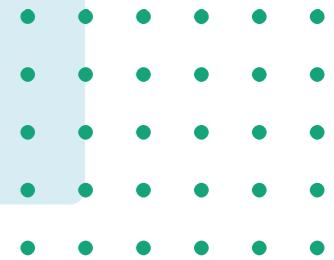

## The Advantages of Wimi Chat:

**Smart Filters**  
With filters, you can find a file, message, reply or link sent by a user in just one click. Our application lets you create effective filters.

**Ultra-fast search**  
Find the message you're looking for immediately, thanks to Wimi's powerful features!

**Real-time interactions**  
Express yourself, react to recent actions, congratulate your colleagues and boost the motivation of your team members and company staff.

**Sharing & Exchanges**  
Share files, links, photos, emojis and comments related to your project and your team's activities.

### Thematic Discussions

The channel is an instant messaging tool that centralizes all project-related discussions. It facilitates teamwork by making it easier to share information, while reducing e-mail exchanges. It's a simple tool that helps your users save time and maintain optimum contact.

### Group Messages

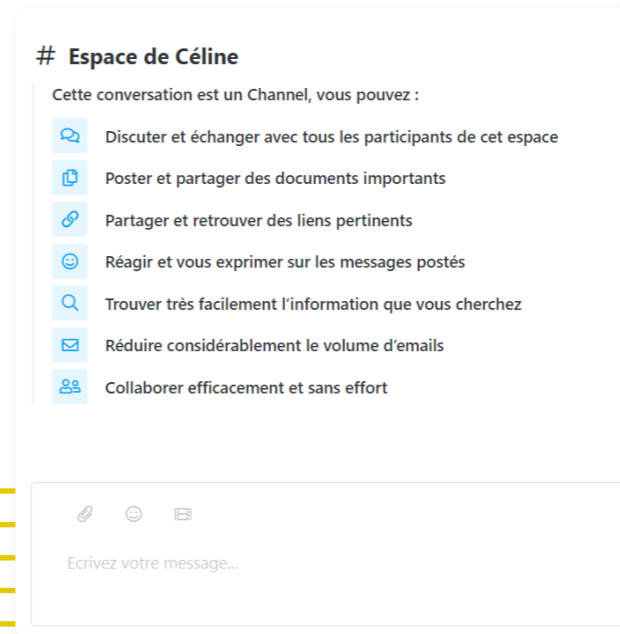

Create your own instant discussion groups to easily exchange ideas with several people on a topic. Our service also replaces web-based tools such as Slack and Skype to provide a more integrated, optimal user experience for businesses.

### # Instant messaging channels

All Wimi workspaces have their own instant messaging channel: easily exchange information with project participants in a dedicated communication channel. Wimi brings you the best web communication tools, enabling your company to offer an optimal solution for communicating every day.

### Private Messages

Reduce e-mail exchanges within your company by creating private discussion channels. Exchange easily with a customer, share documents live, initiate video and audio conversations in one click (AirTime). All features are at your disposal for an optimal real-time communication experience.

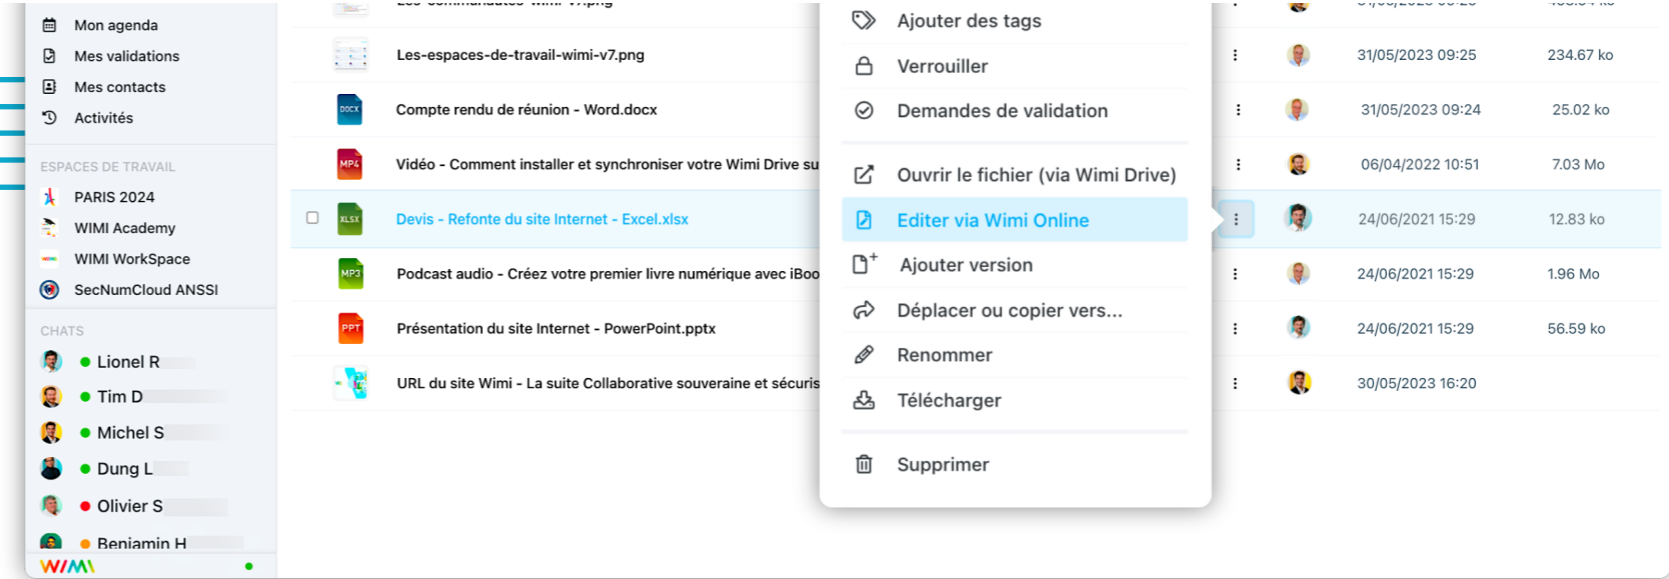

### # Communication platform: Chat & Channels

Via instant messaging, organize your team discussions in dedicated channels and never lose sight of context and purpose. Less e-mails, more clarity.

# Wimi Online, Document management & Wimi Drive

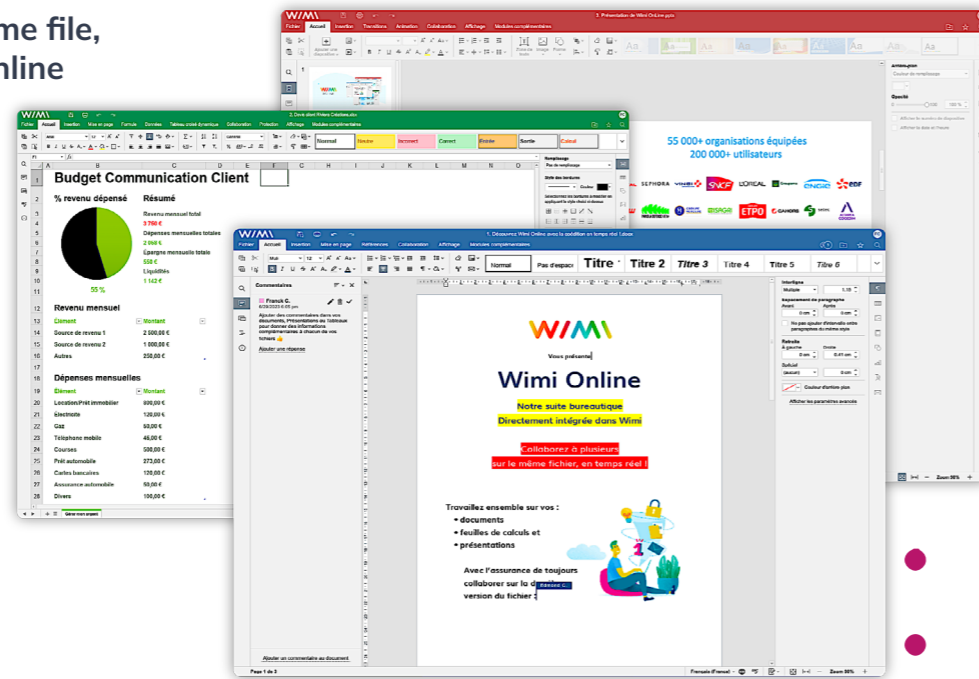

Efficiently edit, manage and share your files and documents online!

File sharing is crucial to project management. Wimi Drive centralizes the storage and sharing of files with teams, customers and partners. It offers real-time collaboration, authorization control, synchronization and security for important files, improving productivity and project success.

## Work together on the same file, in real time with Wimi Online

Organizing collaborative work on your documents, spreadsheets and presentations in real time can be a challenge, especially when several users are working on the same document from different locations. With Wimi, take advantage of a directly integrated online co-editing tool. Integrated comments and chat give teams the ability to collaborate in real time without having to leave their workspace.

## Your favorite licenses in one place:

✓ All popular formats are supported

With Wimi Online, you don't have to worry about compatibility. There are no limits to the types of formats supported: docx, xlsx, pptx, odt, ods, odp, doc, xls, ppt, pdf, txt, rtf, html, epub, and csv.

🗨️ Comments and chat integrated into files

Annotate your files and work live with your collaborators without leaving your document. Discuss changes and ideas in real time, and speed up the problem-solving and decisionmaking process.

## Access your documents offline

Wimi Drive allows offline access to data and automatically manages modifications to ensure that the latest version of documents is always available.

## Automatic versioning

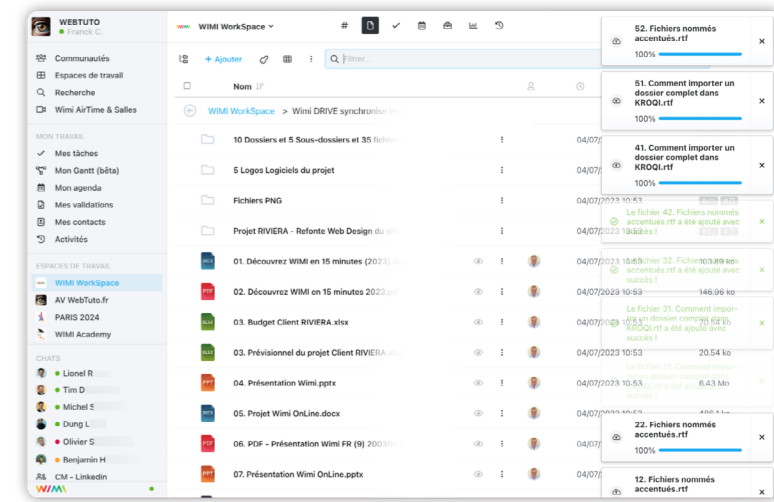

Wimi Drive ensures collaboration on the latest file versions, thanks to automatic version management. Modifications are synchronized in real time, and a complete history is accessible.

## Access rights management

Wimi Drive integrates access-rights management settings to enable administrators to control user permissions on files, guaranteeing data security sensitive.

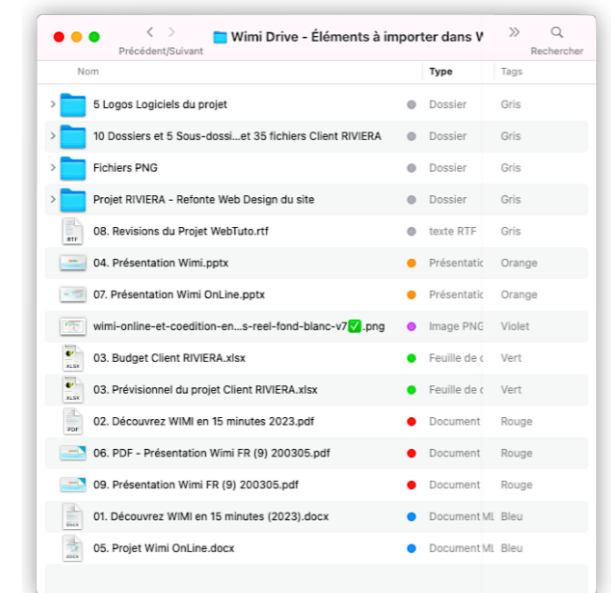

## Save your work

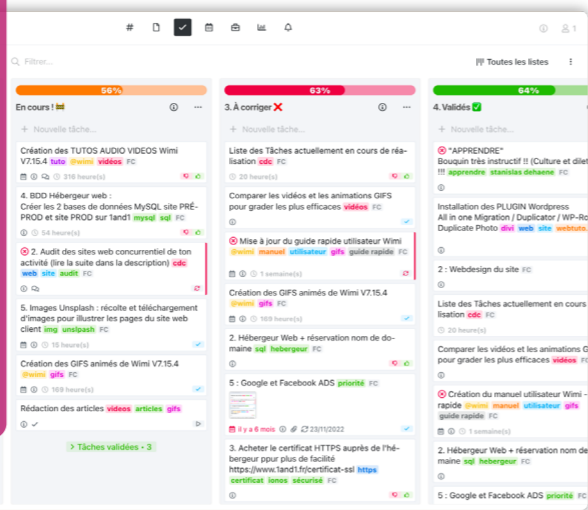

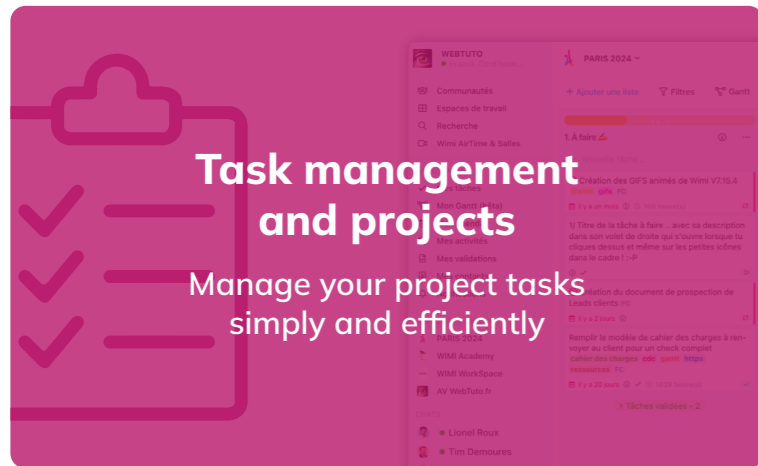

Wimi Backup lets you schedule regular backups to protect your data stored on Wimi, and enables the recovery of lost files in the event of unintentional actions.

## Synchronize your team's work with Wimi Drive!

Synchronize the work of your teams and customers and partners. The Wimi drive enables all users to access the same version of files, with any changes they make automatically synchronized with their workstations, ensuring that everyone is on the same version of the document so they don't have to worry about losing data.

## Manage your projects and activities with task planning and tracking

Wimi is online project management software that centralizes data, provides a global view and simplifies task management, intuitively bringing together a complete range of tools for efficient organization.

### Filter, import and export to-do lists from your other To Do's

Filter, sort and organize each to-do list field to precisely match your needs, whether daily, urgent or recurring tasks, while enabling easy import of predefined to-do lists.

### Manage your team's tasks with ease

Simplify your project task management with a clear view of assignments, progress tracking, and an intuitive interface for each collaborator, enabling efficient management and instant visibility of schedules and delays.

### Create collaborative workspaces

Create workspaces for all types of projects and activities, providing all the services needed for smooth, efficient collaboration, whether for a customer project, a marketing activity, a new product, and so on.

### Plan your team's tasks with the shared calendar

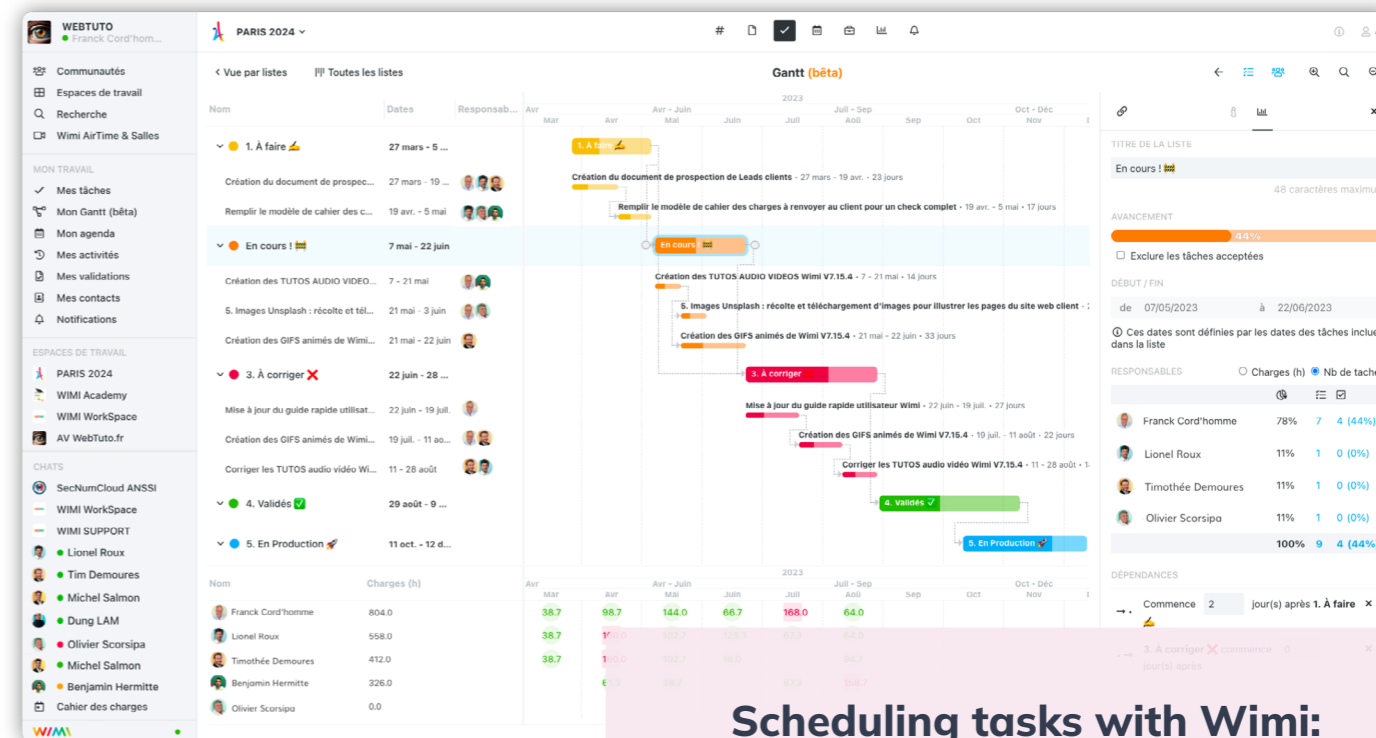

Visualize and plan your tasks and those of your colleagues over time. Your organization's shared schedule is a real added value in terms of time management, project management and task management.

### Plan your projects in simplicity!

Wimi offers a simple, ergonomic Gantt chart for planning your projects, for better time management.

### Visualize delays with task managers

Late tasks are visible in the agenda, enabling rapid detection to avoid any impact on project deadlines.

## Scheduling tasks with Wimi:

### Creating a task

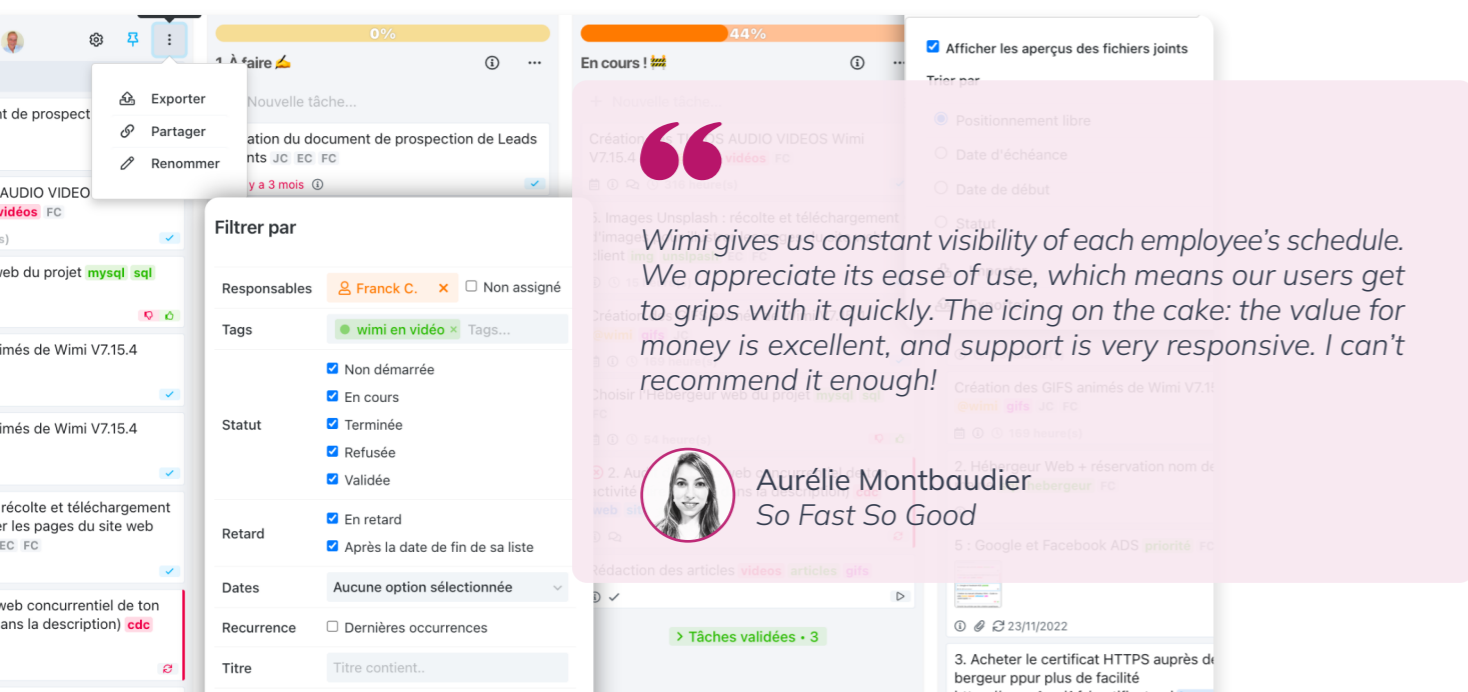

You can create a task by defining its name and description, and assigning it to a collaborator. You can also select the task's start and end dates, and add sub-tasks and associated files.

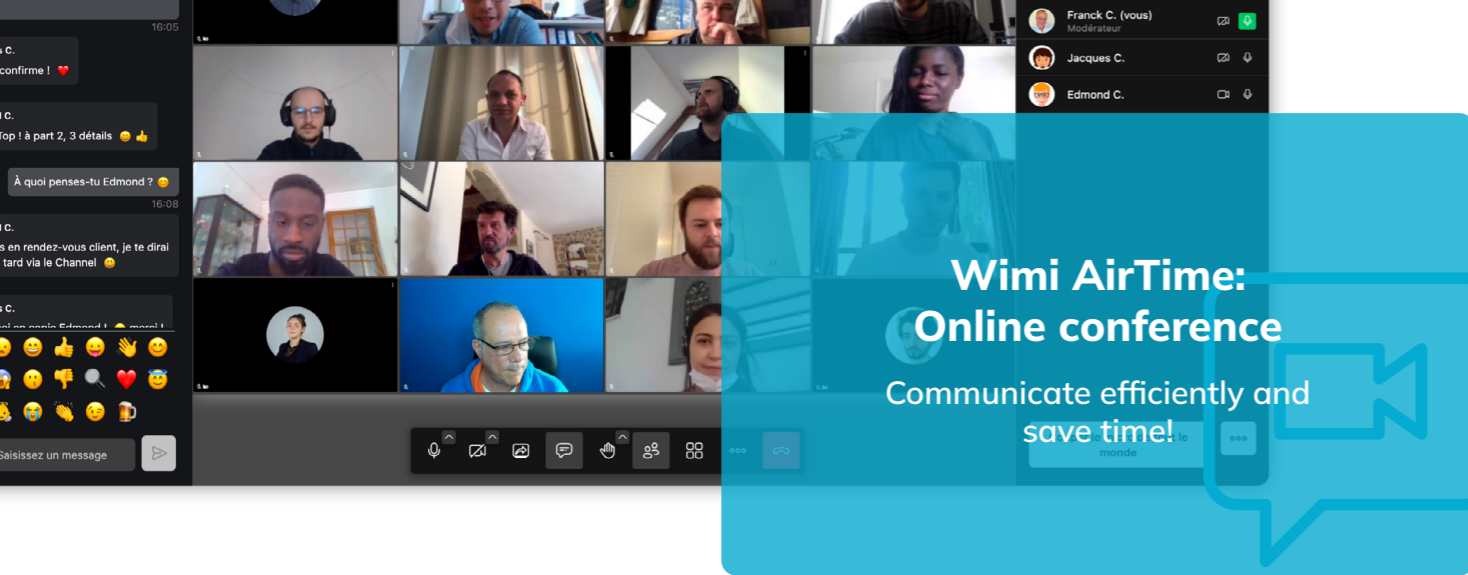

### Task tracking

With Wimi, you can track the progress of tasks in real time and receive notifications of changes or delays. This is perfectly suited to real-time management and anticipation, two keys to successful project management, and greatly facilitated by Wimi.

### Managing completed tasks

Once tasks have been completed, they can be archived for future analysis and better planning. Archiving ensures proper organization and visibility in terms of outstanding tasks. Analysis of past tasks is obviously necessary for the proper development of your business.

Wimi AirTime is an online conferencing tool accessible from your browser, offering real-time audio/video calls and screen sharing to facilitate communication and collaboration within your organization. It simplifies remote meetings by eliminating the need to download or install dedicated software.

## Wimi AirTime at a glance:

### No pre-installation required

No software installation required, with full browserbased functionality to simplify collaboration.

### Audio and video conferencing made easy

Share a link, your guests click, and communication begins instantly via their browser.

### No installation or deployment costs

Wimi AirTime integrates directly into Wimi, accessible via the browser, with no need for installation or servers.

### No account creation required

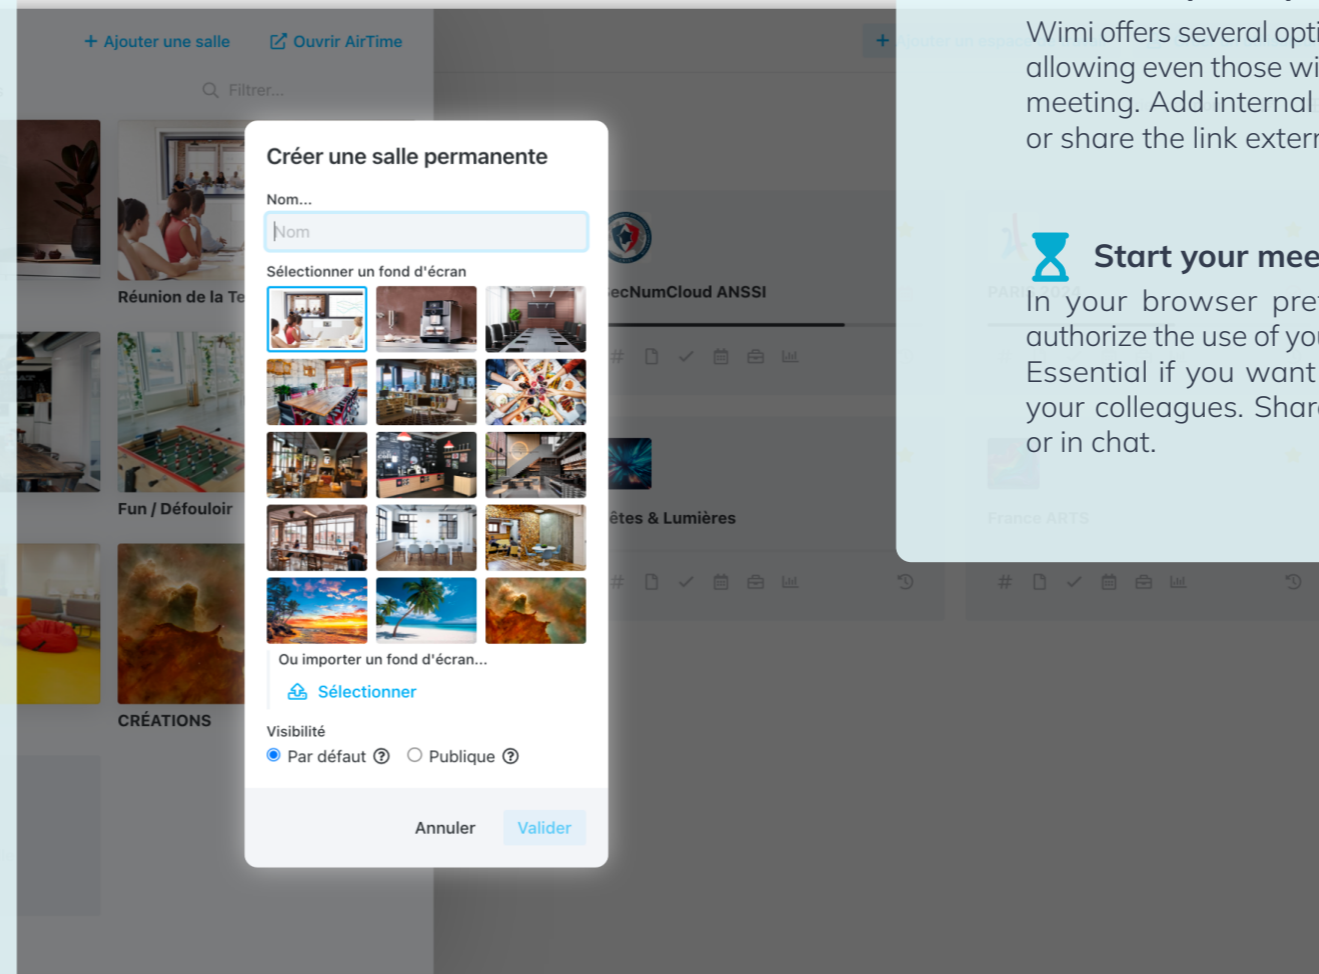

Simply invite someone to communicate, with no need for an AirTime account, just a computer and an Internet connection.

### Share your screen with your team

A screen-sharing tool for efficient virtual presentations and collaboration, allowing you to choose exactly which screen or software to share.

### Real-time message notification

Notifications directly to your desktop so you don't miss important messages, improving productivity.

## A simple, intuitive tool

When it comes to business communications, simplicity and intuitiveness are key. Complex, hard-to-use tools can often cause more problems than they solve. That's why Wimi AirTime has been designed to be simple and intuitive, offering a web conferencing and screen sharing solution accessible to all. With installation-free operation, easy link-sharing and an intuitive interface, AirTime lets you communicate quickly and efficiently with your team, wherever you are, from any computer or mobile device.

## Create a meeting:

### Open AirTime

You can open AirTime in two different ways: either directly from the menu with Wimi AirTime and Permanent Rooms, or in the chat section.

### Invite participants

Wimi offers several options for inviting participants, allowing even those without an account to join the meeting. Add internal participants to your Wimi, or share the link externally.

### Start your meeting

In your browser preferences, don't forget to authorize the use of your microphone and camera. Essential if you want to be heard and seen by your colleagues. Share your screen, react orally or in chat.

### Audio and video communication

The pictograms have been chosen to be intuitive. A simple click activates or deactivates the microphone or camera.

### Screen sharing

By enabling screen sharing, you can share only a specific window, or the entire screen.

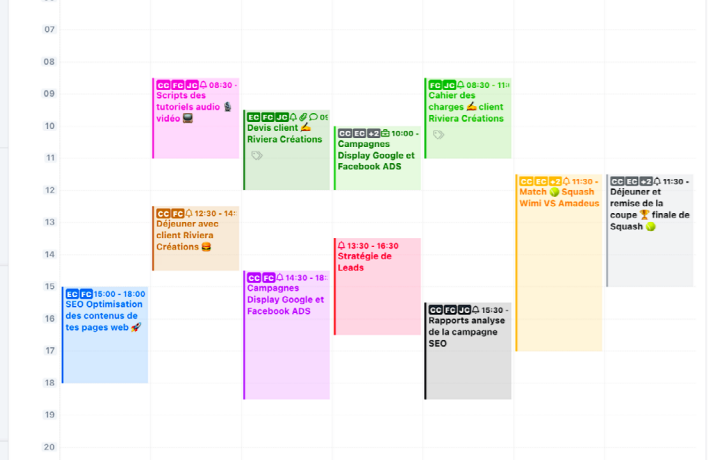

### Live chat

In addition to using voice to communicate, Wimi AirTime features a chat area where you can react instantly to the written word.

### Survey

You can conduct surveys directly in the AirTime space, enabling you to orientate your meetings, or survey your teams live.

**Online calendar: Share calendars with your team**

Share your schedules and calendars online to optimize your team's use of available time.

Wimi lets you create online shared agendas for each of your projects. Robust, comprehensive and flexible, the online shared agenda is easy to use and provides an overview of key project events at a glance. Everyone is aware of project deadlines, milestones and events, and your teams are moving in the same direction.

**A collaborative online calendar for each project**

Each project area has its own shared calendar, where you can add key project events, view tasks with deadlines, and view proposed or fixed meeting slots.

**Keep your team members informed of the schedule**

Thanks to shared calendar notifications, your contributors are aware of key deadlines and events for the project they're working on. Communication within your teams is clear, and everyone has access to essential project information.

**A collaborative online calendar for each project**

Wimi lets you create online shared agendas for each of your projects.  FC Franck C.  
 JC Jacques C.

**Create and customize your calendars**

First, choose a dedicated workspace, add all project participants and assign status and access rights. Then enter missions, tasks, meetings, deadlines, roles and all project-related events. Set reminders and recurrence options. Choose the color code and attach documents for each task.

**The advantages of the Wimi calendar:**

**Send electronic invitations**

Once the meeting date has been set, an e-mail invitation is sent to all participants so that they can add it to their agenda by simply accepting.

**Set reminders**

Link reminders to your events with timing options to ensure that participants don't miss essential meetings or appointments.

**Synchronize your calendars**

Synchronize your Wimi schedule with Outlook to stay organized. Wimi Outlook Connector ensures instant updates on all your devices.

**Check availability**

Quickly check the availability of participants in the proposed slots and choose the best time for your meeting.

**Make changes**

A change of time or participants? You've got need to add details or link a document? It's easy to make a change, and it's a simple one taken directly into account.

**Organize meetings**

Create a meeting request in just a few clicks! You can invite contributors to your project area, as well as external guests.

COMMENTAIRES

Franck C. - 11:27  
 Bonjour à tous ! Semaine chargée ! 😊

Tim D. - 11:38  
 En effet ! J'ai envoyé quelques documents pour aider l'équipe ! 😊

Franck C. - 11:40  
 Merci Edmond ! Je les ai bien aperçu, Top ! 👍

Michel S. - 11:46  
 Hello tous ! Il reste quelques corrections à apporter sur le devis pour le client Riviera Créations 🙌

Tim D. - 11:47  
 Oui Jacques c'est ce que voulais vous dire ! Vous vous coordonnez avec Edmond pour les faire ?

Michel S. - 11:47  
 Oui bien sûr Franck il sera prêt dans la journée

Tim D. - 11:49  
 Je confirme ! On est dessus avec Jacques 😊👍

# Wimi Communities: The corporate Social Media

Create communities that attract, engage and retain employees.

Our enterprise social network facilitates collaboration by breaking down barriers between departments and teams, enabling employees to connect, share ideas and centralize communications. Our CSR improves business performance by fostering collaboration, knowledge capitalization and employee engagement.

## Follow-up & Discovery

Follow your colleagues, discover new communities based on your preferences and create your own.

## Surveys

Use surveys to involve your community, gather opinions and detect unmet needs. Encourage people to speak out and get involved.

## Public/private page

Corporate, public or private community? You decide how much visibility you want.

## Mention of users

Make sure your users don't miss out on any information by mentioning them in your publications.

## Comments

Encourage user interaction, promoting comments for an enriching community experience and a more engaging platform.

## Personal news feed

Find a personalized news feed based on the internal communities you follow.

## Rights management

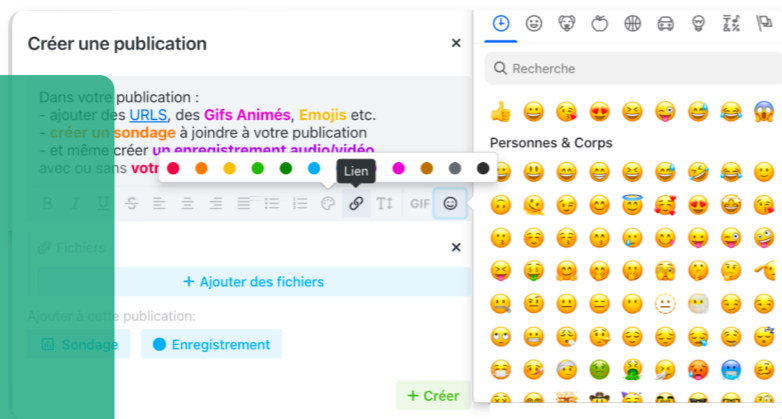

Administrator, moderator, member, you simply assign and remove rights to community members.

## Reactions

Allow your users to react under publications by adding the emoji of their choice. This fun feature is a great way to share an opinion.

## Link to projects

Has your community come up with a project idea? Attach it to one or more workspaces with a single click.

## Wimi Communities at a glance:

### Take advantage of the power of Wimi communities

Wimi Communities combines the features of popular social networks to create communities focused on your organization's priorities, fostering collaboration, communication, document sharing and innovation, improving internal productivity.

### Improve your internal communications

Internal communication is crucial to business success. Corporate social networks facilitate connection, collaboration and information exchange through messaging, newsgroups, polls and forums. They facilitate the dissemination of documents, calendars, projects and announcements, reinforcing internal communication and collaboration.

### Unleash the full potential of your internal users

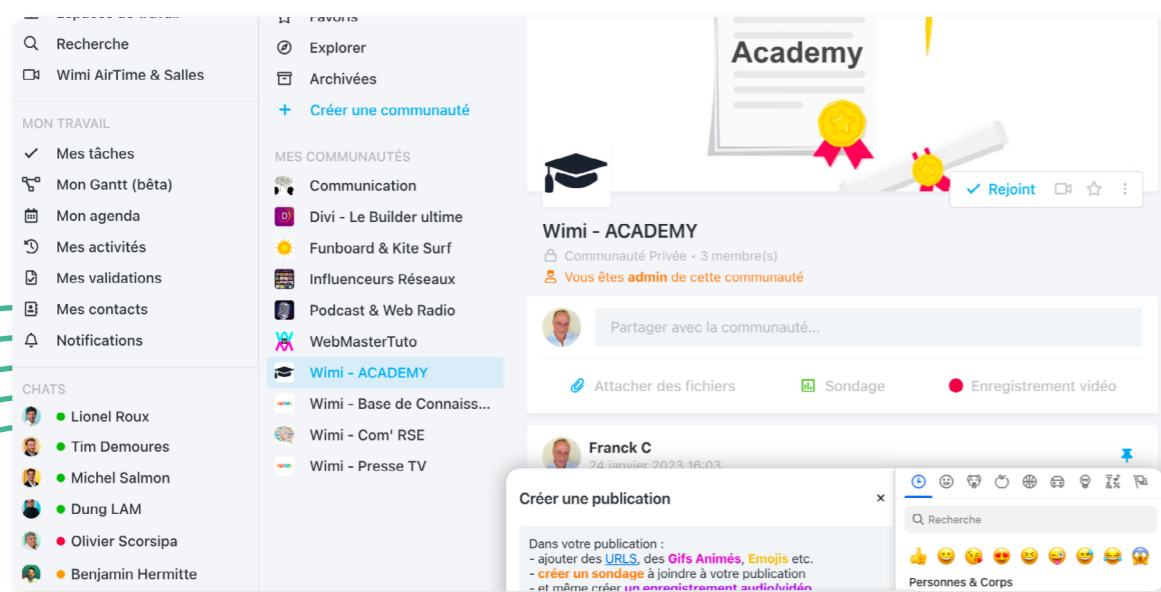

The corporate social network offers a space to share expertise, build relationships and search for internal skills, fostering professional growth aligned with corporate objectives. It's a tool for employee connectivity, engagement and fulfillment.

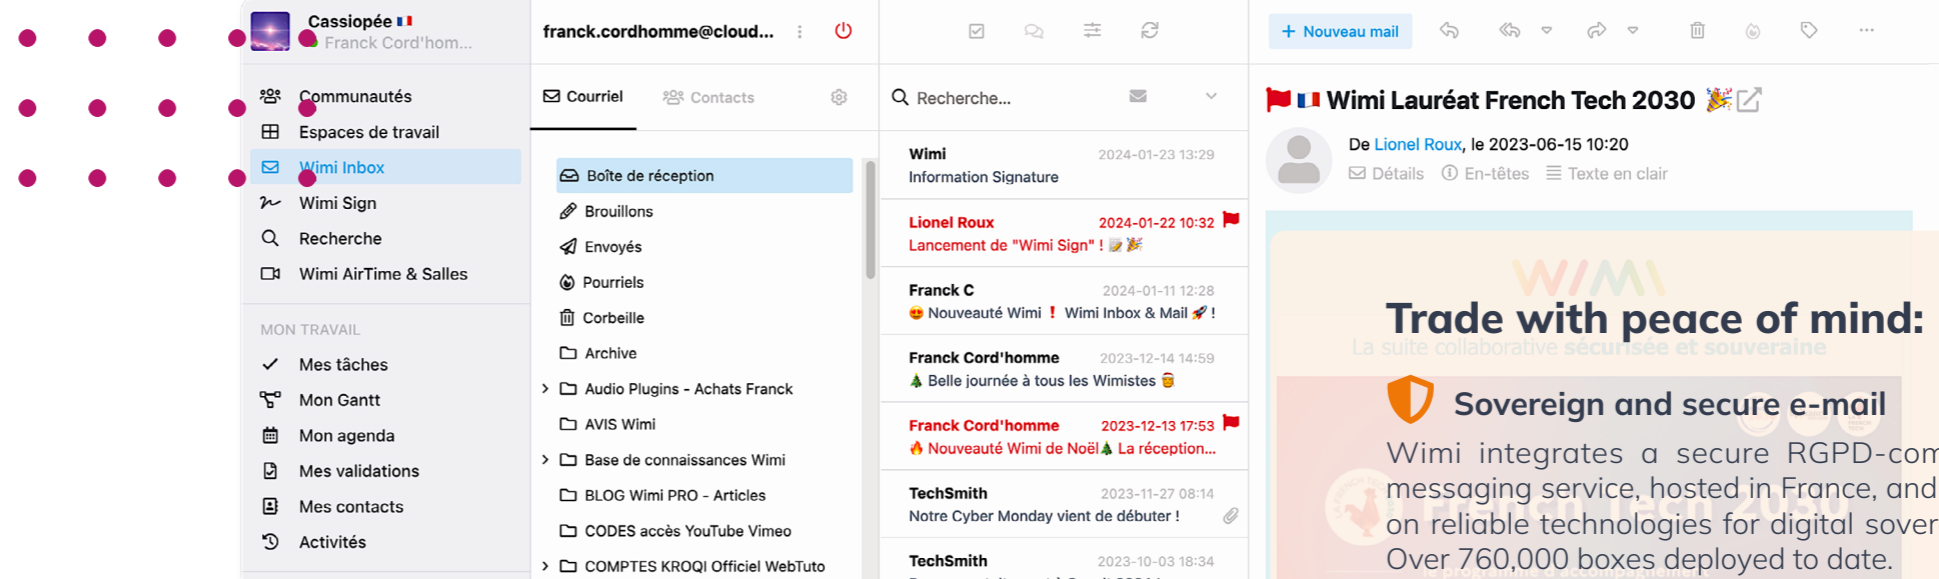

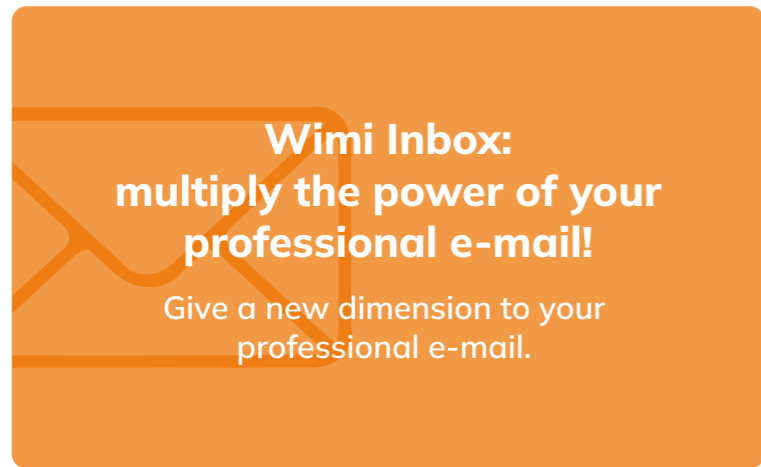

### Engage them with rich, personalized content

Wimi Communities centralizes communities, encourages the creation and sharing of content, and stimulates engagement by inviting reactions. This content facilitates community management, encourages open discussion, and strengthens collaboration, employee commitment and corporate culture.

### Set up communities according to your needs

Wimi Communities lets you create personalized communities with different levels of visibility. Roles (admin, moderator, member) are easily assigned, fostering collaboration and engagement. This improves user understanding and strengthens their commitment to the community.

**Trade with peace of mind:**  
La suite collaborative sécurisée et souveraine

**Sovereign and secure e-mail**  
Wimi integrates a secure RGPD-compliant messaging service, hosted in France, and based on reliable technologies for digital sovereignty. Over 760,000 boxes deployed to date.

**Perfectly secure mailboxes**  
All Wimi mailboxes include comprehensive protection by VadeSecure against a range of threats, including spam, viruses and phishing.

**Optimized deliverability**  
Wimi improves e-mail deliverability by using DKIM, SPF and DMARC authentication features, an anti spoofing service, and continuous reputation monitoring.

**Secure access with strong authentication**  
Access to the Wimi Inbox service is protected by the best practices defined in the SecNumCloud repository and, optionally, by Wimi MFA (MultiFactor Authentication).

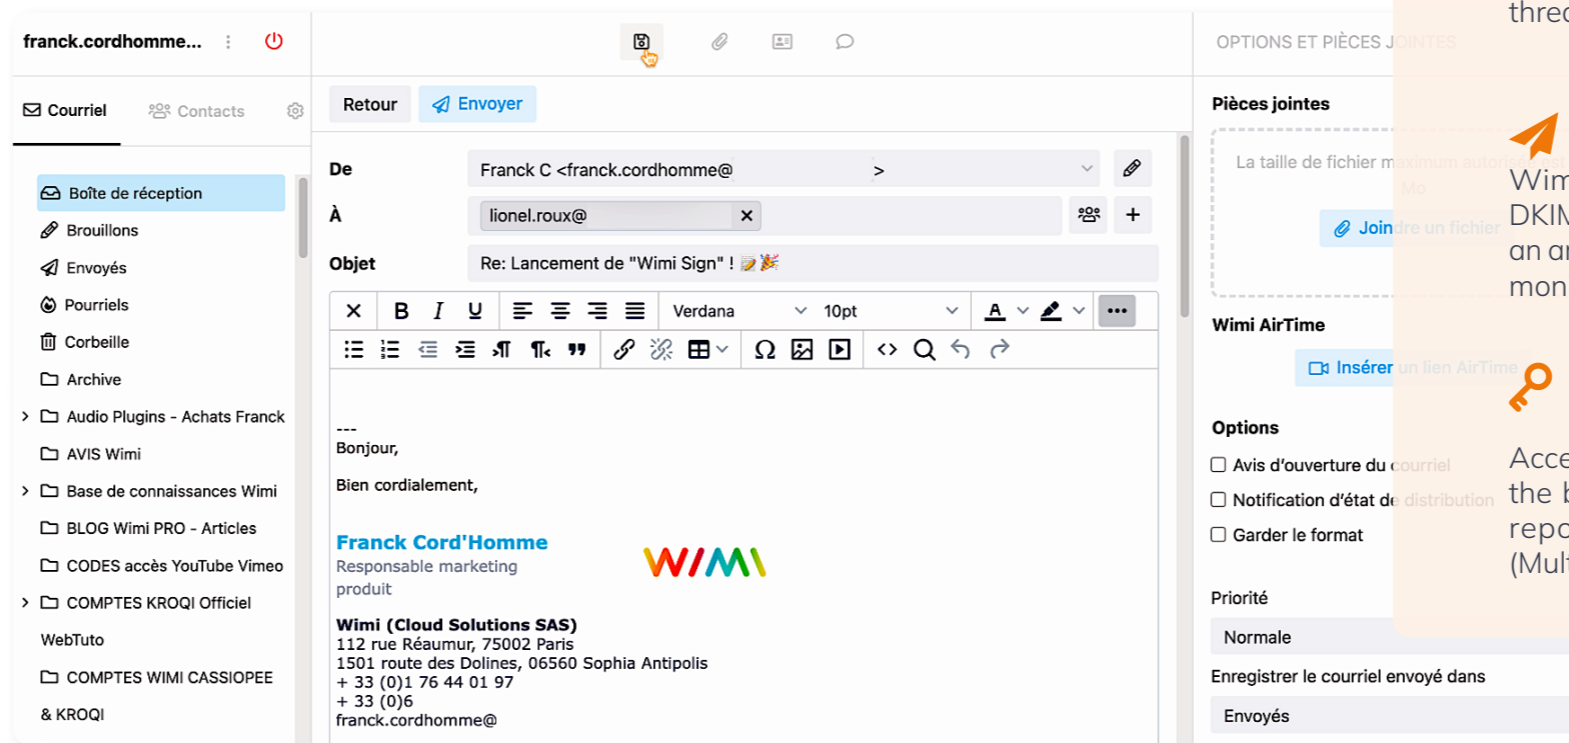

E-mail is still the primary means of communication in the professional world. It's also the oldest communication service and, paradoxically, the furthest removed from modern collaboration platforms. With Wimi Inbox, bring your professional e-mail closer to today's collaborative uses, and discover the unique experience of a complete and perfectly integrated collaborative suite.

### A fast, clear and comprehensive interface

With Wimi Inbox, you'll benefit from a polished, responsive interface that's consistent with that of the other services included in the Wimi suite. As a result, the learning curve for this service is shortened. The hierarchy of actions is optimized to deliver a fluid user experience while offering a particularly high level of functional richness.

### Reinvent your mailbox management

Wimi offers a rich, clear interface for creating, modifying and managing your mailboxes. But Wimi goes even further, allowing you to assign each mailbox to your collaborators. Assigning a mailbox to a user will automatically trigger several configuration operations, displaying a new page for the user concerned and preconfiguring Wimi Inbox.

## The advantages of Wimi Inbox:

**Bidirectional synchronization**  
Wimi Inbox lets you manage one or more calendars and contact lists. These calendars and contacts can be bidirectionally synchronized with all your devices.

**Handling large attachments**  
A service that converts large attachments into download links, eliminating attachment size limits.

**Integration with workspaces**  
Wimi Inbox lets you create tasks, events and documents, and save attachments in the workspaces of your Wimi account, directly from an e-mail.

**Works with all mailboxes**  
Wimi Inbox is compatible with all mailboxes supporting the IMAP protocol, but is optimized for mailboxes supplied by Wimi.

**Wimi AirTime integration**  
For each of your e-mails or invitations, you can simply add a Wimi Airtime link to communicate by videoconference.

**Customizable domain names**  
Create domain names for your mailboxes, enabling the use of professional mailboxes with domains specific to your business.

- Confirmer et envoyer

Wimi Sign, integrated with the Wimi Suite, ensures the compliance and security of electronic signatures, guaranteeing protection against US extra-territorial law. This integration enhances workflow efficiency with a user-friendly signature experience.

## The two signature levels

**Simple link signature and SMS code**

With «Wimi Sign», simple signing is fast and efficient thanks to access via a link, simplifying the process and improving the fluidity of operations. The process offers a user-friendly experience, reducing potential obstacles in workflows and document exchanges.

**Certified signature by identity check**

«Wimi Sign» offers the certified signature, which requires confirmation of identity via an official document, reinforcing transaction reliability and compliance. This reinforces confidence in the electronic signature process, meeting the security needs of companies and institutions.

## Electronic signature

### Legal probative value - eIDAS certification

Wimi Sign guarantees the legal validity and authenticity of electronic signatures, in compliance with European standards, ensuring solid legal security for sensitive transactions and documents.

### Simple or certified signatures

Versatility to adapt the signature method according to security and legal validity requirements, whether for routine documents or binding contracts, guaranteeing a solution tailored to each electronic signature scenario.

### Chain or asynchronous signatures

Wimi Sign offers two signature options to suit different signatory preferences and situations (chained for consistency and traceability, and asynchronous for flexibility).

### Secure digital archiving

Wimi, aiming for ANSSI SecNumCloud qualification in 2025, guarantees the security of sensitive signed documents thanks to advanced security protocols and high-level encryption. This reinforces the confidentiality, integrity and protection of stored documents, offering a secure solution for their safekeeping.

## Why promote electronic signatures?

### Devis Refonte du site Internet

Electronic signatures offer a number of significant advantages, which explains why they are becoming increasingly popular.

**Speed**

Electronic signatures speed up validation processes, eliminating the delays associated with mailing or physical travel. This improves operational efficiency, responsiveness to market demands and significantly reduces processing times.

**Enhanced safety**

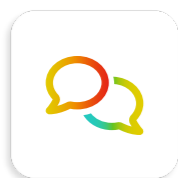

Electronic signatures offer enhanced security thanks to advanced encryption protocols, ensuring the integrity, authenticity and confidentiality of signed documents.

**Reducing paper use**

Electronic signatures reduce the use of paper, helping to preserve the environment by reducing the carbon footprint. This aligns with social and environmental responsibility, responding to concerns about sustainable development.

## Wimi mobile applications

### Communities

Access your Wimi communities: news, favorites, explore and «My communities». Add your media, comment, or react with emojis.

### Channel

Touch a Channel and communicate with your colleagues. Each Channel displays a wide range of options and allows you to view its users.

## Wimi MFA

## Wimi Workspace

### Project areas

Launch quick actions, check upcoming tasks.

### Task management

Keep a clear vision of who does what and for when.

### File management

Access, store and share all your important documents.

### Notification

Keep track of the latest actions.

### Quick search

Find a file or a task, an event or a message.

### Shared calendar

Add events and check the availability of your teams.

### Wimi MFA security through strong authentication

Access your Wimi account on your workstation and launch Wimi Air and Wimi Workspace with complete peace of mind.

Wimi MFA (Multi Factor Autentification) is the strong authentication application offered by Wimi. With Wimi MFA you'll have no doubts about the identity of the person logging into your Wimi account. Available on iOS and Android, Wimi MFA lets you add several additional authentication factors when logging into your Wimi account via a smartphone or tablet with fingerprint, facial recognition, or a temporary 6-digit code. Wimi MFA considerably reduces the risk of identity theft.

## The SemNumCloud qualification

Wimi aims to achieve the highest level of safety currently recognized in France

With the cyber threat high and increasingly sophisticated, the choice of a secure, sovereign cloud solution represents a major strategic challenge for public and private players alike. With this in mind, the ANSSI (Agence Nationale de la Sécurité des Systèmes d'Information - French National Agency for Information Systems Security) has set up the SecNumCloud security standard, which guarantees the highest level of security and technical protection in the world: SecNumCloud.

Vital Importance Operator

State bodies

Protection-sensitive companies data

### SecNumCloud covers more than 360 requirement points

The SecNumCloud repository guarantees an optimal level of security, ensuring that even the slightest incident will be detected and have limited consequences for your organization. You can rest assured that you are following the best security practices recommended by ANSSI.

Information security policy and risk management	Safety organization information	Human resources security	Access control and management identities
Physical and environmental safety	Assets management	Cryptology	Operational safety
Communication security	Acquisition, development and maintenance of information systems	Relations with third parties	Information security incident management
	Information business continuity	Compliance	

## What can you expect from a SecNumCloud qualified player?

By choosing Wimi, you benefit directly from the best security practices recommended by the ANSSI, and have access to a proven collaborative platform that guarantees the highest level of technical and legal protection for your data.

### The security processes of the software

- Access to production environments
- Backups, restoration
- Automatic detection of usage anomalies
- Security incident management

### Software security (code)

- Cryptology
- Regular penetration tests
- Safety features
- Ongoing training for developers

### Hosting security (Servers)

- Physical and environmental safety
- Centralization of machine logs
- Customer data compartmentalization
- Event analysis and correlation

### We offer full legal protection against extraterritorial laws

Wimi is an independent 100% French company, founded in Paris in 2010. Our SaaS solution is hosted by a French host physically located in mainland France. We guarantee our customers that none of their data will be accessed, transferred or processed outside the European Union.

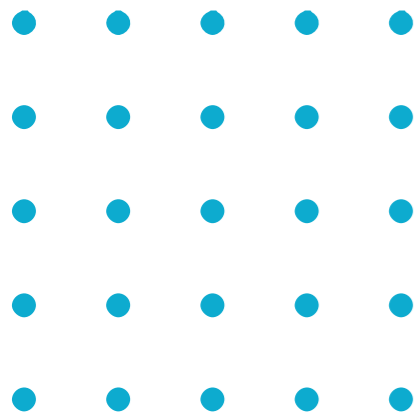

### Wimi aims to become the first collaborative suite to be awarded the Cloud de Confiance label

The priority of the Government's Cloud policy is to offer the highest level of protection for the data of public and private organizations. We at Wimi have shared this vision for over 10 years. The Cloud de Confiance label offers a double level of security (technical and legal), enabling French organizations to benefit from the most secure Cloud solutions on the market.

SecNumCloud\*

\* 2025 qualification objective

## Security, Privacy, Sovereignty

In addition to SecNumCloud, Wimi offers a wide range of security modules, functions and solutions.

### Wimi MFA

Wimi MFA (Multi Factor Authentication) is Wimi's strong authentication application, available on iOS and Android.

Wimi MFA allows you to add several additional authentication factors when logging into your Wimi account, thanks to a physical device (smartphone or tablet) by :

6-digit temporary code

Fingerprint

Facial recognition

Wimi MFA considerably reduces the risk of identity theft, password theft and other authentication-related risks. With Wimi MFA, you have no doubts about the identity of the person logging into your Wimi account. Our security matches the state of the art in cybersecurity while offering a pleasant user experience, without additional equipment (e.g. USB keys, badges, etc.) that is easy to forget or misplace.

### Wimi Tattoo

Share your sensitive and confidential documents with complete peace of mind! Thanks to its unique file «watermarking» technology, Wimi Tattoo, integrated and available in the Wimi collaborative suite, enables you to quickly and accurately identify the origin of leaks and minimize the associated risks: misappropriation, falsification, theft...

Imperceptible

Discreetly preserves document integrity and confidentiality.

Versatile

Our watermarking integrates seamlessly, guaranteeing a smooth user experience.

Resilient

Digital watermarking ensures the authenticity of documents despite any manipulation.

Safe

Our solution enhances security by giving users a sense of responsibility.

Adaptative

Easy, comprehensive protection for a variety of document formats.

Economical

Rapid detection of violations, effective risk management, cost reduction.

### End-to-end encryption

«End-to-end encryption of workspaces containing sensitive data requiring absolute confidentiality: proven cryptographic technologies certified by ANSSI.»

E2EE = End to End Encryption

Features: Protection against data theft, theft of hosting equipment, intrusions, user password theft, user device theft, permanent access monitoring, centralized control...

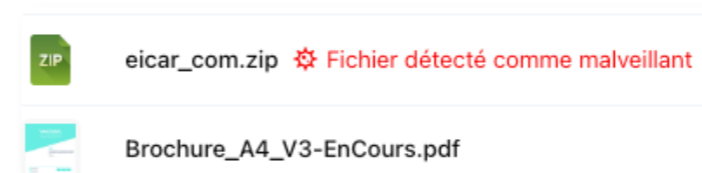

Some organizations, public or private, need to ensure a very high level of security for their sensitive and strategic projects, as well as meeting legal obligations relating to «business secrecy».

The targets of our end-to-end encryption functionality fall into two main categories: the first includes sensitive projects from public organizations, OIVs and companies in critical sectors. The second category is made up of highly sensitive projects from existing Wimi platform customers.

End-to-end encryption should not be confused with other encryption methods, such as encryption in transit or encryption at rest, which are widely used. Using only the latter (including KMS, HSM or BYOK), data is first accessible to the server in its unencrypted version, and then encrypted with a key known to the server. This means that, in the event of an intrusion, the data is accessible to an attacker, which would not be the case with end-to-end encryption, available on Wimi.

### Antivirus

A powerful antivirus is deployed on the SecNumCloud Wimi infrastructure, enabling a file to be scanned as soon as it is uploaded or imported onto the Wimi platform. If a risk is identified, the file is automatically quarantined and the user is notified.

### Wimi Armoured

Wimi Armoured is our solution deployed in the European defense eco-system: end-to-end activation, direct access to the DR classification level, and deployment on tactical servers in EDGE mode.

## Infrastructure for trust

Wimi has its own Data Center to guarantee optimum security

Wimi has opted for total independence, having built its own data centers located in France to meet SecNumCloud requirements and offer an optimal user experience across the entire value chain, rather than relying on third-party infrastructures and public clouds for its online services. This choice, closely linked to our commitment to confidentiality, security and energy efficiency, enables us to guarantee data sovereignty and control the end-to-end security of our solutions.

### Made-to-measure installations

A custom-designed data center with back-up systems for uninterrupted service continuity. Maximum redundancy guarantees the availability of essential services in the event of hardware failure.

### Electricity supply

The data center starts with a crucial switchboard, ensuring stable power supply via redundant UPS, PDUs and fiber optics for optimum security and high availability.

### Emergency power systems

To ensure continuity, there are several installations, remote sites and back-up batteries. Generating sets provide power for several days, ensuring safety and availability.

### Why did we decide to design our own data centers?

Data center development is a relatively recent field in modern history. As a pioneer in the development of a European collaborative suite, SecNumcloud, Wimi had to lead the way.

«It was not possible to rely on existing public clouds to meet the company's security and privacy objectives, SecNumCloud requirements and those of our customers.»

«... furthermore, given the intensity of Wimi usage, its rapid growth and our short medium term ambitions, building our own data centers was a functional, financial and environmental option far superior to that of a rental / pay-as-you-go model on a public cloud».

Lionel Roux  
Co-founder of Wimi

### Wimi focuses on 360 degrees of sustainable independence.

To guarantee the sovereignty of its data, the company relies on three pillars: software independence, hardware independence and economic independence.

The choice you make has an impact on the future of the Internet in Europe. By adopting hardware, software and economic independence, we are able to respect our ethical, social, economic and ecological values. We are striving to build a credible alternative to the web giants, to enable access to digital sovereignty and preserve the cybersecurity of business data. We want to do this with you, while respecting people, the confidentiality of their projects and the planet.

### Software independence

The solutions developed by Wimi are either designed in France by their own team or based on open source solutions, enabling them to control the code from A to Z and remain responsive to user needs. This approach also results in significant energy savings.

### Material independence

The design and control of their own Data Centers ensures maximum security and confidentiality, as they control all levels of data storage and processing. Their expertise in open-source cloud technologies also enables them to achieve significant energy optimization.

### Economic independence

Wimi is not listed on the stock exchange and is owned by its founders, shareholders and employees. They support the local economy and practice fiscal transparency. This allows them to make independent choices without having to make concessions.

### Choose Wimi to build a more sovereign and secure future

It's crucial to select digital tools developed by reliable players to retain ownership of your data. By opting for Wimi, you are choosing technologies developed in a strict environment in terms of data security and confidentiality.

Environment and energy efficiency \_\_\_\_\_ 36

“

*Wimi is a solution perfectly suited to project-based collaboration. Its simplicity and flexibility of use convinced us. The Covid-19 and telecommuting periods only amplified the need for such a solution to maintain exchanges and pursue our projects.*

Daniel Coutelier  
Ministry of Ecological Transition

In a context where energy savings are essential to meet the need for energy sobriety and the absolute priority of reducing our carbon footprint, Wimi aims to play a key role through its technological choices and the positive exogenous impact of its use by its customers.

### Hybrid Work Facilitation

By enabling remote communication and information sharing, there's no longer any need to go to the office to get the best possible working environment. Wimi makes it possible to collaborate from home, on the move or in the office. Teams using Wimi lighten the load on public transport systems and road infrastructures, reducing their carbon footprint by 40-50% in terms of commuting.

### Travel reduction

By enabling exchanges via videoconferencing, it is no longer necessary to systematically visit customers and partners. Face-to-face meetings are reserved for key contexts, or situations where videoconferencing is not appropriate.

### Information is shared rather than sent

Information (e.g. files) is centralized and shared in a common space, accessible when needed. Gone are the days of endless e-mail exchanges, where information is replicated exponentially in each recipient's inbox.

### Reducing paper use

The digitization of business processes is leading to a reduction in paper printing. No more paper task lists, no more printing presentation materials, no more paper archives, no more printing contracts for signature.

### Productivity improvement

The arrival of «project mode» and agile collaboration in digital form makes it possible to better optimize actions, to do more with less, to circulate information more rapidly... Employee productivity is thus significantly improved.

## Wimi environmental impacts: Exogenous factors

Improved quality of life / change population behavior

Protecting and restoring biodiversity and ecosystems: hybrid work

Improving inclusiveness at work: asynchronous and hybrid working

Security and sovereignty: SecNumCloud

Combating and adapting to climate change - LUCIE 2025

Pollution prevention and control: routes, paper..

## Wimi environmental impacts: Endogenous factors

Optimizing storage and sharing content

Optimizing CPU-intensive requests

Gross energy efficiency of machines making up the Wimi server infrastructure: 64% on computing power and 91% on storage

Recycling decommissioned machines

Datacenters Scaleway - Renewable energies

### Lucie» certification in 2025

The «Lucie» 26000 label will guarantee that our company, which publishes Wimi, is committed to having a positive impact on people and the environment. We want to solve tomorrow's challenges and respond to the ecological emergency, by moving from intention to action. Wimi employees will be supported and trained.

### A more efficient and economical infrastructure

Wimi's infrastructure is state-of-the-art when it comes to improving its energy impact. In fact, CPU-intensive requests and storage are optimized, content is shared, decommissioned machines are recycled, there's an in-house paperless policy, and the datacenter is powered by 100% renewable energy. In addition, the gross energy efficiency of the machines making up Wimi's server infrastructure is 64% better for computing power and 91% better for storage, compared with alternatives on the market.

# They trust us

# WIMI

Wimi is the collaborative suite that brings together everything that your organization needs in terms of collaboration, advanced document management, project management and communication, to streamline the work of your teams and the relationship with your external partners or customers. Wimi is the 1st sovereign collaborative suite to have started its SecNumCloud and Cloud de Confiance qualification process.

*Tired of information lost in e-mails and files scattered across your network? Wimi is a collaboration tool that helps you get rid of all that. Organized in project mode, all information is centralized. Using Wimi means less stress and greater efficiency!*
