

ITOps through sustainability

Green IT drivers

Legislation:

- Reporting and decarbonisation trajectory (CSRD, UK SRS planned for 2025)

CIO objectives:

- Search for IT modernisation and performance
- Efficiency as a source of savings (CO₂ / €)

Challenges

Data collection often manual and time consuming

Low observability limiting data insights & actionability

No live data hence difficulty to track impact

Lack of reconciliation between CO₂ & € impacts

Automated Data Collection

Across the whole IS/IT ecosystem of clients'

360° Data Observability

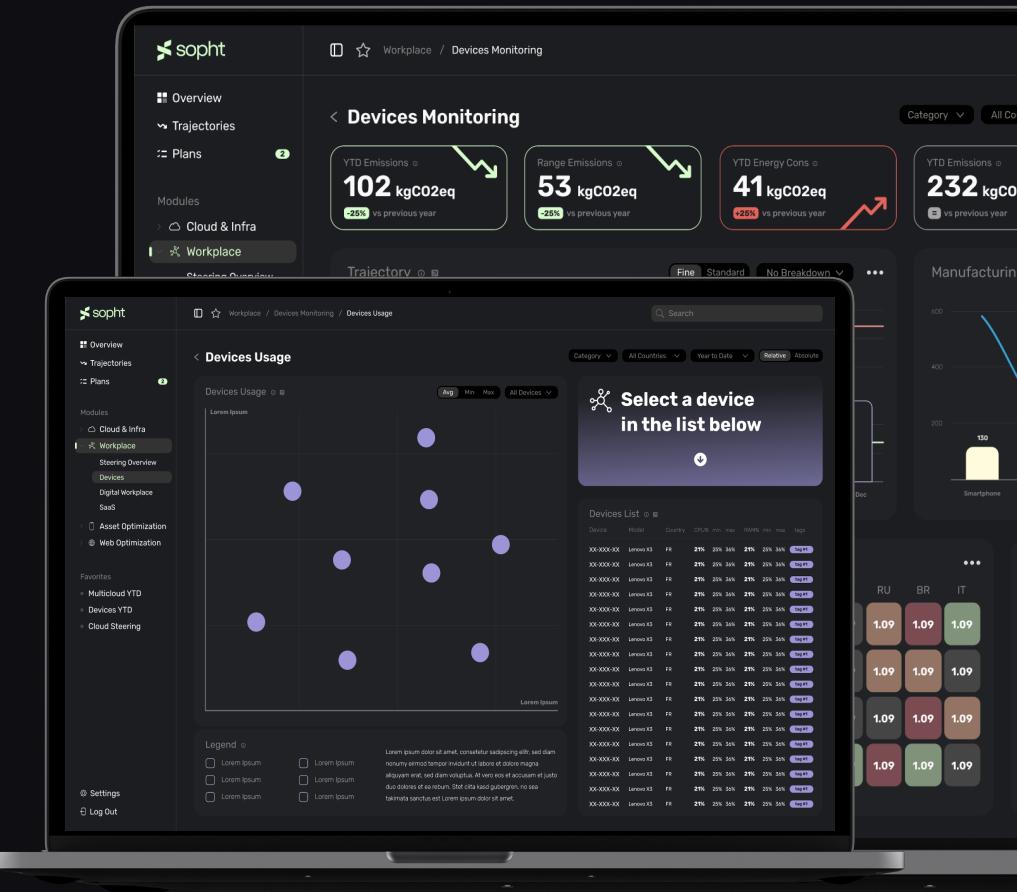

Covering Scope 1, 2 & 3 with granular and dynamic data

Guided Actionability

Action plan allocated to key stakeholders

Impact Monitoring

Trajectory scenarios & CO₂/€ impact monitoring

Cloud

57% decrease on a footprint on Cloud Services

12% decrease on a 4 M€ spend

Infra on-prem

20% decrease on a footprint of 4 tCO2eq/year

17% decrease on a 600 k€ spend

Assets

25% decrease on a footprint of 300 tCO2eq/year

30% decrease on a 1 M€ spend (laptops)
