# AMMP OS

The operating system for distributed energy

What is AMMP?

AMMP provides digital solutions for distributed energy globally. Our SaaS platform offers remote monitoring and management for energy users, energy service companies, and vendors of renewable energy systems.

Vendor-agnostic integrations

Analytics and alerting

**Performance tracking and reporting**

All data under one roof

Single point live access to critical metrics from all systems in your portfolio. Drill-down into details about any individual system with one click.
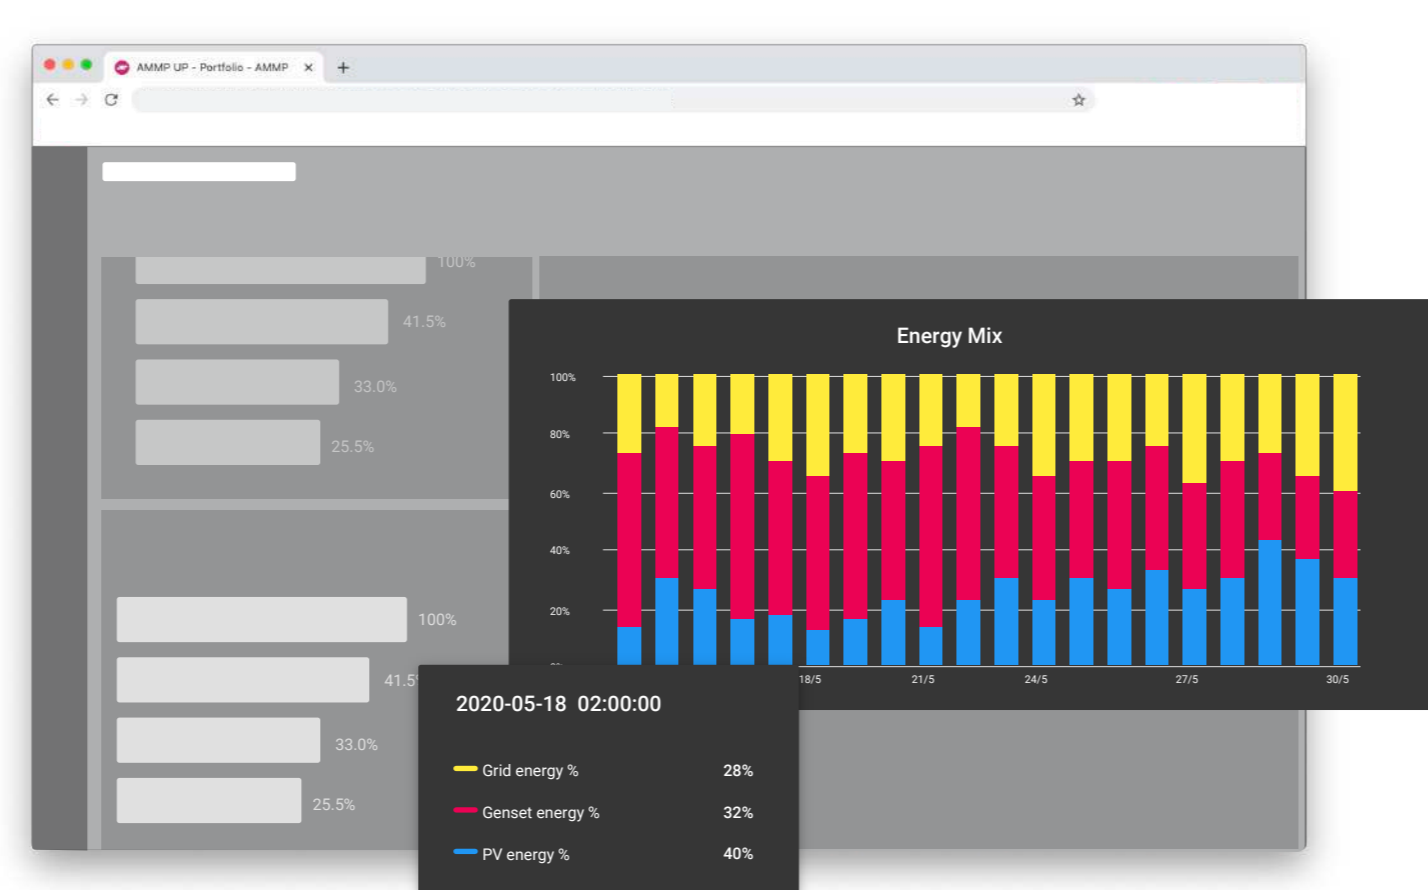

Better technical operations

Monitor system anomalies to predict potential emerging issues. Proactively plan maintenance for key components like gensets and batteries.
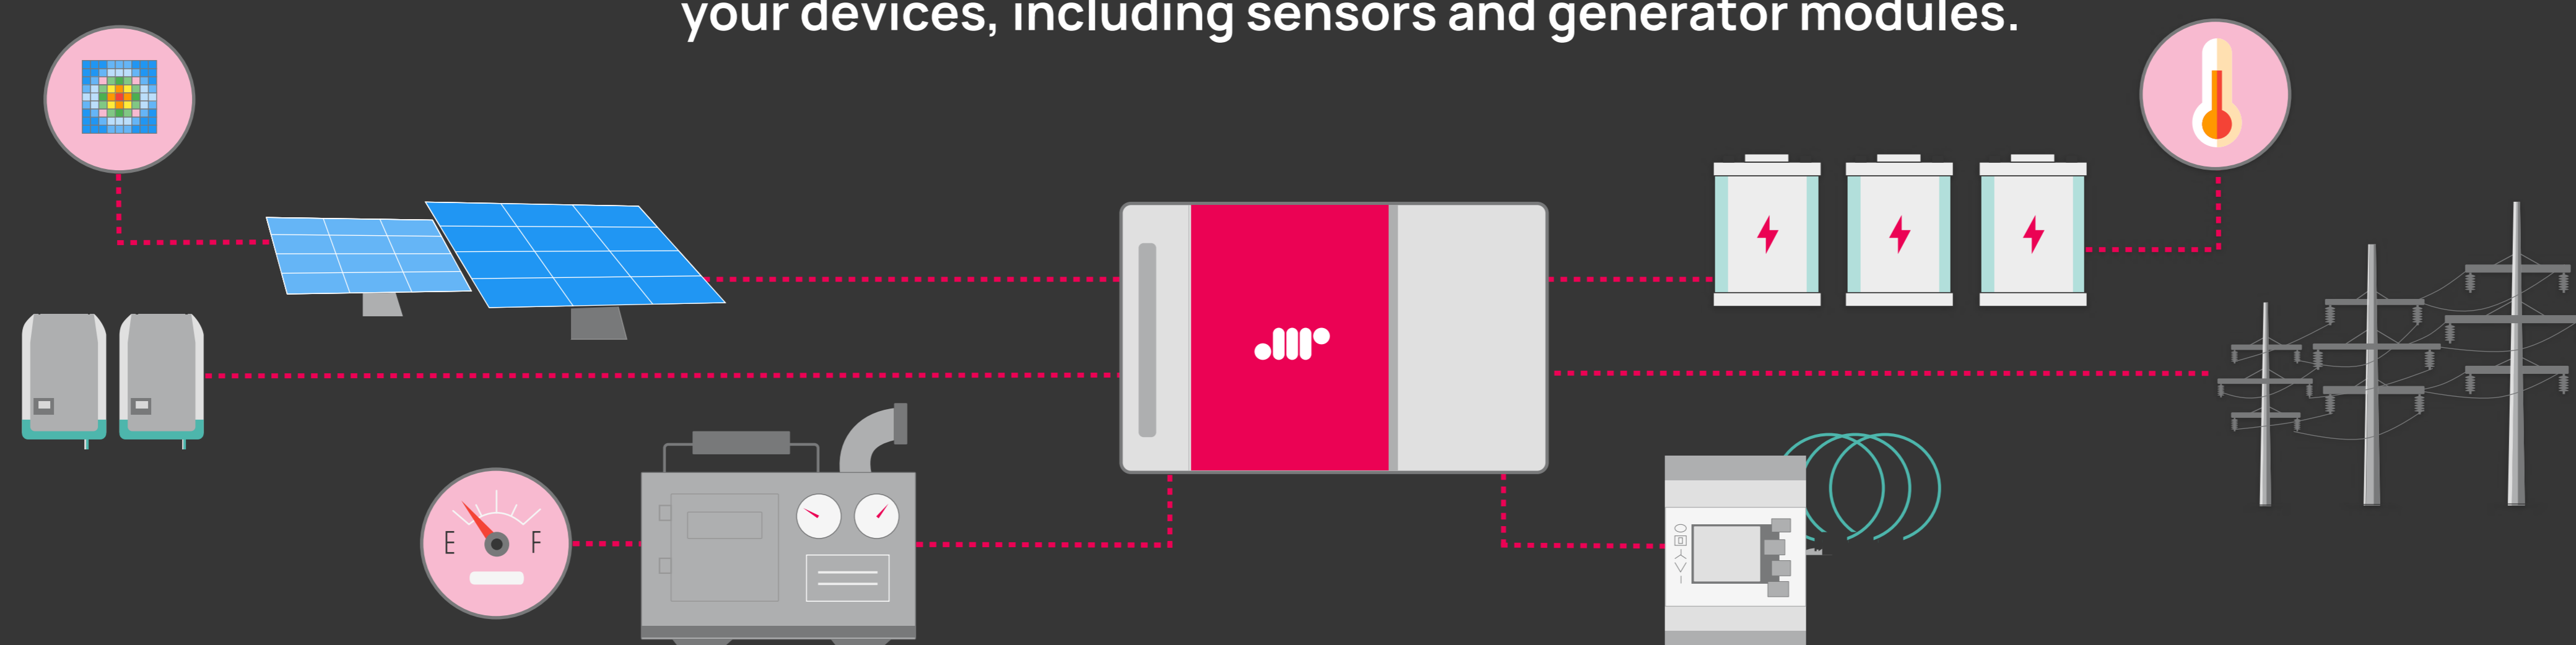

Simplify commerical operations

Benchmark the actual performance of your systems against your projections. Receive automated reports for yourself, your clients, and investors.

AMMP Edge

Enabling real-time data acquisition and processing from all your devices, including sensors and generator modules.
