Modulos unleashes the full potential of AI for your company

Market research and consulting firms continuously increase their estimates for the market potential of AI solutions.

IDC forecasts the AI market incl. software, hardware, and services to grow by 16.4% to USD 328 bn this year and to reach > USD 550 bn by 2024. Specifically, AI software platforms are expected to generate the highest growth with 33%.

Est. size of AI market

USD 550bn by 2024

Key driver

Data-driven decision making

However, many firms have struggled to extract the value using AI. What are the challenges they face when implementing effective AI solutions?

AI technologies are complex. Real-life business challenges need to be translated into AI problems. Then, usually, data scientists develop, train, and test sophisticated AI models, which requires in-depth expertise. Aside from data availability and data infrastructure challenges as well as security constraints, this process and the translation back of the resulting model outcome usually is far from seamless and effective.

Kevin Schawinski
CEO & Co-founder

“We democratize not only the access, but also the use of AI to enable clients to focus on value-adding tasks.”

With Modulos' automated machine learning (AutoML) platform, you can focus on truly value-adding tasks.

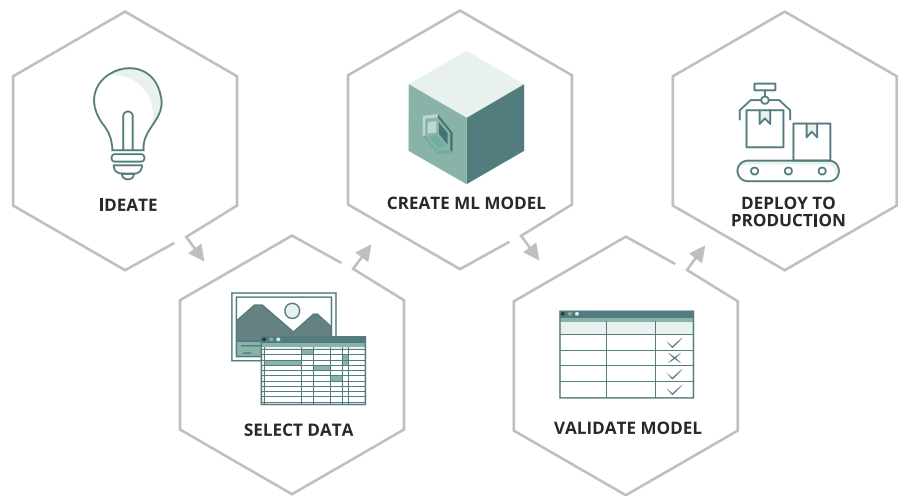

Instead of spending resources for machine learning model development and model validation, our platform reduces these efforts substantially. It will help you and your teams to generate actionable insights quickly to provide a solid basis for data-driven decision-making. Modulos AutoML unleashes the full potential of AI for your company.

Modulos unleashes the full potential of AI for your company

We have created a standardized, easy-to-use workflow which can be applied by professionals with limited AI expertise.

Explore your ideas by simply uploading your datasets. The platform provides guidance and automatically selects and trains appropriate ML models. You can fine-tune your inputs throughout the process.

to the cloud**

Anna Weigel
CTO

“Of course, our aim is to develop state-of-the-art AI solutions. Usability and convenience have however always been of utmost importance for us. ”

The Modulos AutoML platform and its solutions can be deployed on-premises or to the cloud. We also support the onboarding process and offer technical support.

We care about security constraints of our clients. Therefore, we offer flexible ways to deploy and provide access to our platform and the AI solutions taking into consideration your specific needs: on-premise, private cloud, and public cloud; we support it. Are you ready to embark on your AI journey?

Technical ML features

state-of-the art

Expert support and

effective collaboration

Modulos unleashes the full potential of AI for your company

Modulos AutoML integrates numerous AI models and decision-making routines into an integrated solution – easily accessible for you.

Our development team ensures to keep our industry-leading ML solutions state-of-the-art. We support all relevant tabular and imaging data formats and offer models for the most common ML tasks, e.g. regression, classification, time series forecasting. We will furthermore roll out probabilistic classification models soon.

We support the deployment of the platform in your organization to start generating insights right away.

Our customer success manager will help you to seamlessly manage the deployment and onboarding process of the platform in your organization. Our excellent technical support team is available for you in case of any technical issues.

Claudio Bruderer
Product Manager

“ We want to engage with you and your AI teams. Effective AI training programs have proven successful for many client teams. ”

For questions which go beyond the AutoML solution, our team also offers dedicated AI consulting services.

We have received numerous client requests to address issues regarding data analytics, development of use cases, AI business case design or to explain the value creation through AI to the leadership. We are happy to complement our product offering with dedicated AI consulting services. We want you to make the most out of the existing AI technology.

Modulos – The power of the AI platform
