

A committed  
partner at the  
heart of your  
electronic  
projects

Flexibility — Responsiveness — Quality — Reliability

## Our expertise and performance

Our production unit offers great flexibility in thru hole and SMT assembly allowing to manage both **prototypes** and **small series** as well as **large productions**.

Thanks to our competence, a lot of actors from various sectors give us their confidence : Automotive, Electrical Distribution, Railway, Industry, Medical, Defence, Telecom, etc. Our main concern is to provide quality service to each of our customers.

## Our know-how and control

CEPYA put at your disposal a specialized team with **more than 20 years of industrial experience** to provide you with a quality service that meets your objectives in volumes, deadlines, quality and confidentiality.

**Complete production management** : procurement, CMS and thru hole assembly, system integration, functional test

## Fields of activity

Industry

Security/ Home Automation

Medical

Defence

Aeronautics

Energy

Telecom

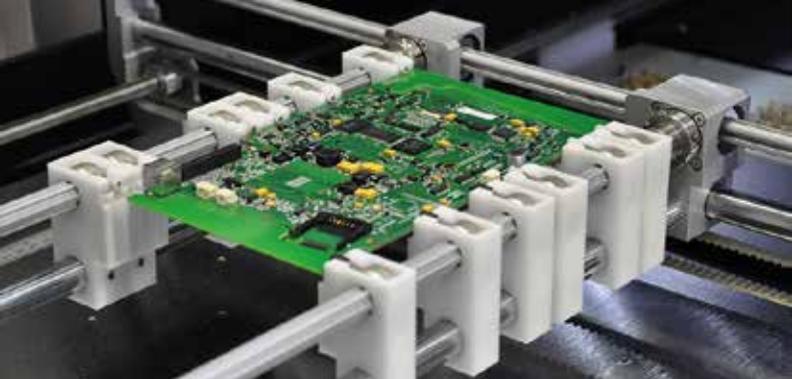

Railway

Civil Engineering

Transport

Flexibility — Responsiveness — Quality — Reliability

A partner committed to serving your needs

Quality System - ISO 9001

Driven by the desire to satisfy you, **Cepya** has set up an **ISO 9001 certified Quality Management System (QMS)** which puts the quality approach at the heart of its activities and commits us to an ambitious and realistic policy aimed at improving processes.

## Our activities

### Development

- o Full (from idea to turnkey product) or partial
- o Feasibility study
- o PCB layout
- o Production files

### Electronics assembly

- o Assembly of PCB in Thru hole and SMT technology
- o Assembly of full system
- o Industrialization
- o Systems integration
- o Protection by coating
- o Protection by potting

### Tests

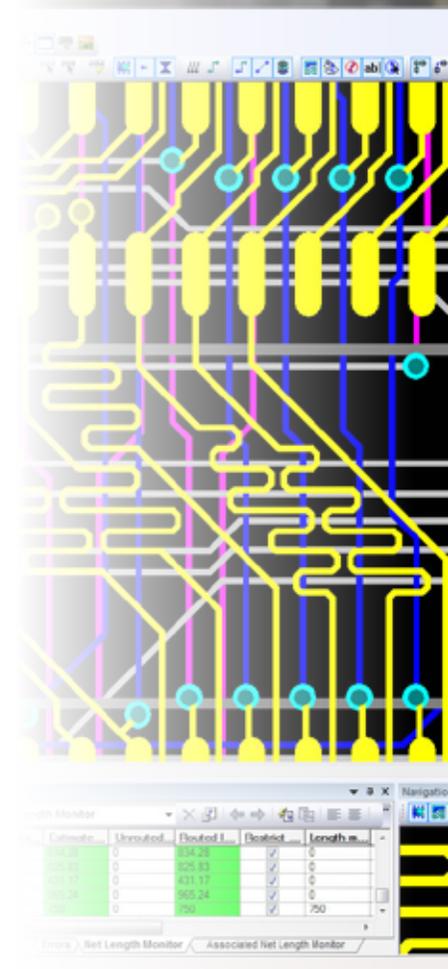

- o Functional
- o EMC Pre qualification
- o Climatic

### Reproduction of «old» products

- o Single board
- o Full product

### Subsidiary services

- o Electric cabling

**Development and production in electronics** : study, design and development of circuit, sub-assemblies or complete systems

# A single contact for your projects
