

Site & stock security

- **Detect intrusions**
- **Evaluate risky situations**
 - Variation in light conditionsUnpredictable movement of objects
 - Scene occlusion
- Protect specific perimeters

- Securing access to sensitive areas
- Increasing reliability of detection

Benefits

- Reduced false alarm rate
- Immediate lift of doubt
- Self-learning algorithms

Prevention of technical failures

(%)

- Assess the probability of technical failures
- Detect anomalies (example of fire detection: hot spot, flame, smoke)
- Detect uncategorized anomalies
- Prevent breakdowns & accidents

- Detection of internal & external anomalies
- Grouping of cameras by areas of interest

Benefits

- Lower corrective maintenance costs
- Quicker intervention
- Self-learning algorithms

Access

@ O

- Check & recognize people (morphology) & vehicles (license plate)
- Recognize specific characters (barcodes, symbols...)

- Automation of access controls (vehicle barriers, etc.)
- Real-time or delayed monitoring

Benefits

- Reliability of identification, even when attempting to change appearance
- Reduced operating costs (fewer control staff)
