DECARBONIZING  
NATURALLY

# What we offer

**SysFarm, your natural and local carbon contribution solution, by financing agroecological projects**

## Local and natural projects

French agriculture is nowadays one of the few sectors that can offer carbon-negative products.

Financing agroecological levers allows you to participate in a local and natural carbon contribution cycle.

In addition to the emission reductions generated, low-carbon agricultural projects help restore biodiversity, improve air and water quality, reduce the use of pesticides and achieve many other co-benefits.

## Certified and monitored projects

As part of the National Low Carbon Strategy, France and the Ministry of Ecological and Solidarity Transition have set up the Low Carbon Label.

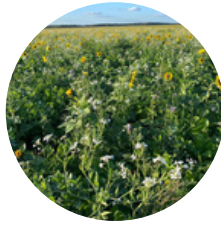

Agriculture is recognized as a crucial sector in the fight against global warming and the achievement of carbon neutrality in 2050.

The Low Carbon Label allows you to certify your contribution projects and generate recognized Emission Reductions. All SysFarm projects are certified with the Low Carbon Label.

## Agroecological levers to capture CO2

Incorporation  
of organic  
fertilizer

Integration of  
plant cover

Legume  
planting

Restitution of  
crop residues

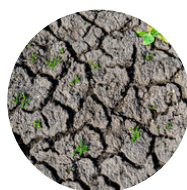

## And many co-benefits for a regenerative agriculture

Water quality

Air quality

Limit soil erosion

Phytosanitary  
pressure

Improving  
biodiversity

# How we work

## A unique and single point of contact

SysFarm has chosen to work with the only French label recognized for the certification of your projects:

1<sup>st</sup>

CarbonFarm is the first Low Carbon Label certified tool for field crops developed and distributed by SysFarm.

### Government

Controls and manages the calculation methods of the Low Carbon Label, certifies and registers all projects carried out by SysFarm

### Companies

Invest in agroecological projects that capture CO2 and obtain the funded Emission Reductions

### Farmers

Implement agroecological levers on their farms and generate emission reductions

**SysFarm**

### Projects owners

Federate farmers and take charge of the follow-up and agronomic advice of the farms

## Calculation and monitoring of Emission Reductions

SysFarm has developed and provided the first certified Low Carbon Label tool for field crops on the market since February 2022.

The development of this tool allows SysFarm to control and monitor more easily the projects we propose to our financiers.

## Administrative management and financing of projects

SysFarm acts as an agent for the administrative management of the project and the submission of the application to the Low Carbon Label. We take care of the follow-up during the entire duration of the project with an annual audit on the farms.

We take care of the management of the financing, then its redistribution according to the result of the farmer and our calculator. The final audit is carried out by an external certifier recognized by the State.

**Download a GHG assessment of a farm:**

# Our expertise

## Course of the projects

The projects carried out by SysFarm are only on French soil and are governed by the Low Carbon Label, which provides a standardized and reassuring framework for the financier. The projects take place over five years, during which time the farmers commit to implement agroecological levers.

The challenge is to maintain traceability throughout the duration of the project, so we conduct an annual audit of each farm. We also encourage farmers and financiers to exchange together during the projects to create a local social link.

### Year 1

### Year 5

## Tailor-made projects

At SysFarm, we offer our clients tailor-made offsetting projects, according to the specifications of the financier. The company's desire is to establish a natural and local cycle in the compensation of emissions.

The specifications of the financiers may need requirements according to several criteria:

- Selection of the levers to be put in place
- Type of farm or crop
- Geographical area
- Co-benefits to be highlighted

# Our accomplishments

## SysFarm in a few numbers

**228.000**

Tonnes de CO2 générées par nos agriculteurs

**1.000**

Farmers notified in 2022 about the Low Carbon Label

**500**

Greenhouse gas balances carried out

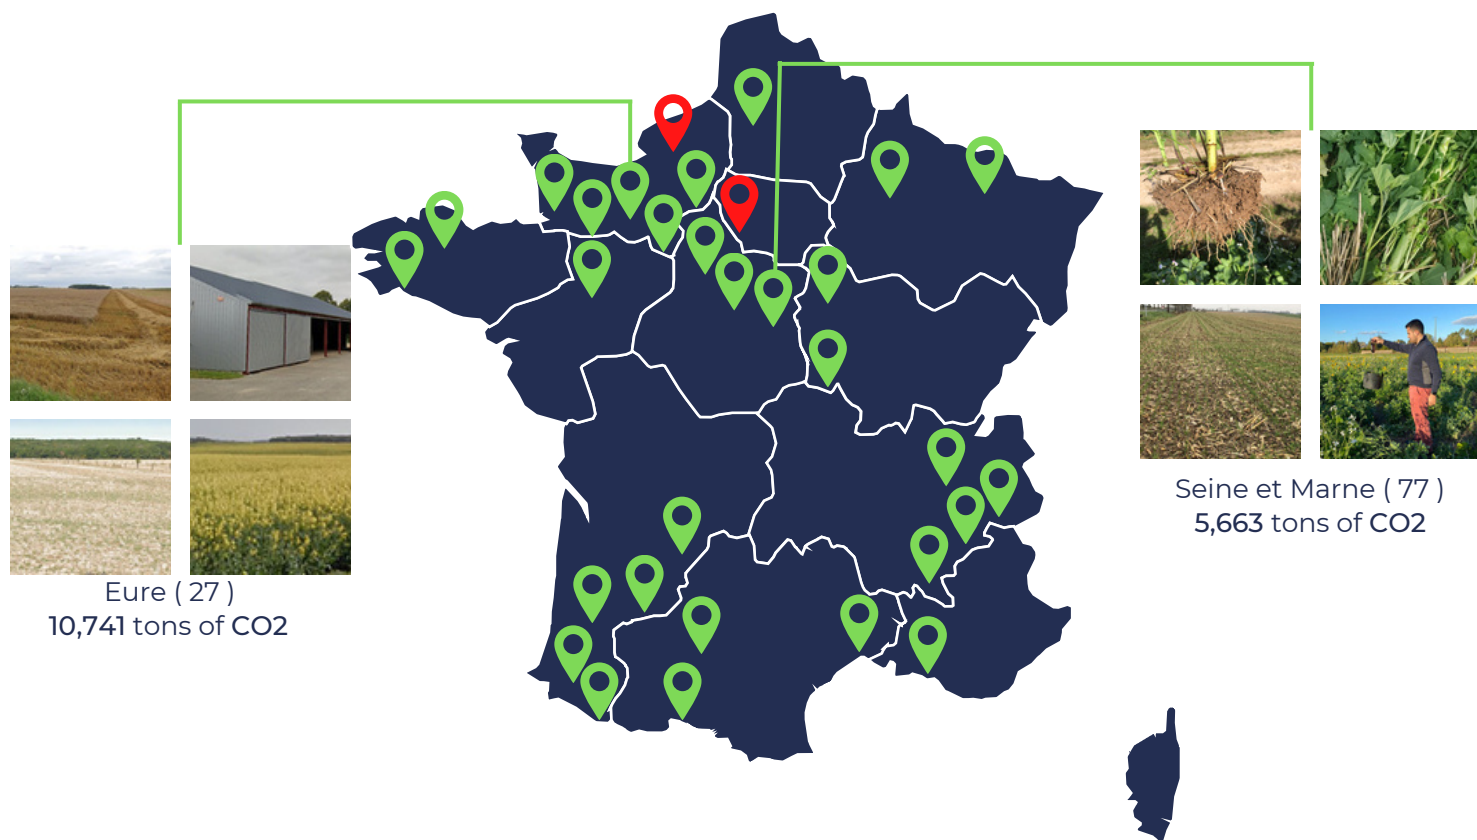

## They trust our CarbonFarm tool

## SysFarm's partners

*"The agricultural carbon market reconnects all businesses and citizens with farmers. It sheds light on the key role of agriculture in the fight against global warming."*

**Antoine GILBERT**  
Co-founder of SysFarm
