

The Security Platform for business Performance

The most secure and rapid way to connect workforces to corporate IT/OT

Don't choose between security and Business performance

The cyber risk threatens your business performance.

44 % of risk management experts say that cyber is the most important global business risks for 2023.

3 Minutes

Workforce access
provisioning.

Self-Service onboarding.

Current solutions leave you exposed.

No total defense. To invest in detection and response solutions is far from being enough.

100%

Invulnerability track record
for Systancia users.

No Zero Trust
compromission.

Cybersecurity gets increasingly complex.

Technologies, skills,
initiative, costs... :
impossible equation?

Instantaneous

Workforce access to IT/OT
resources.

Any context, any time.

cyberelements, trusted by businesses of all shapes and sizes

Our VPN was not enough anymore; PAM solutions became the new norms. It's a must for a service provider to secure the access when connecting to customers' infrastructure."

Industry: IT Service provider

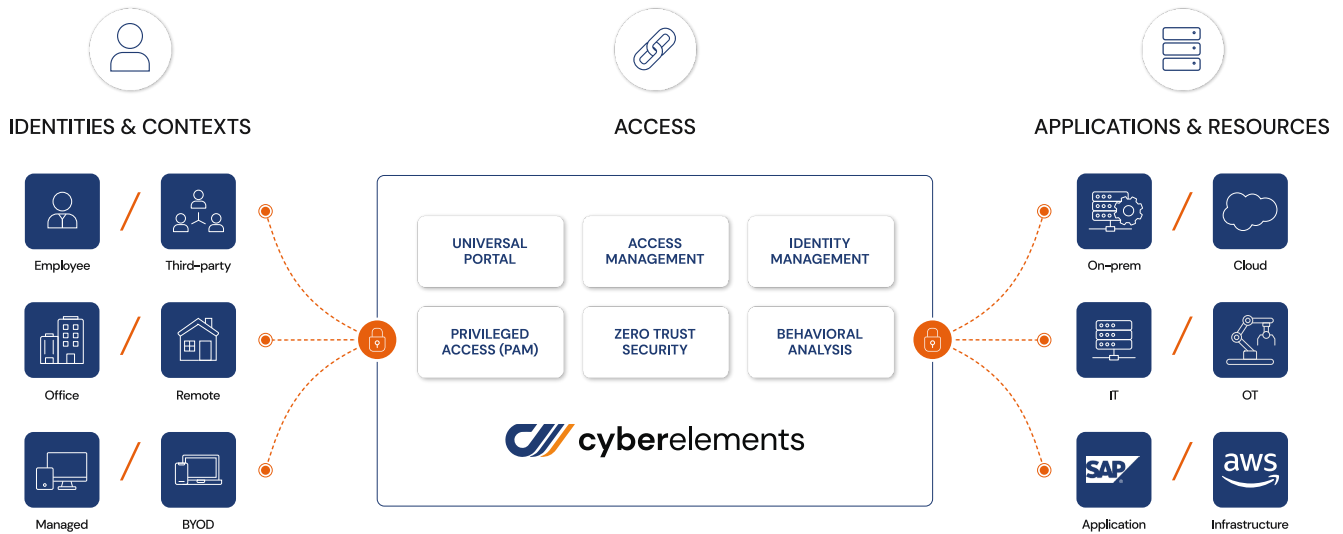

We needed a highly secure solution to ensure remote access and control. We can now give privilege access to sensitive data from satellite telemetry."

Industry: Aerospace

The only SaaS platform unifying provisioning and access security

cyberelements securely and easily connects workforces to their applications & systems and ensure full control to the organization

Why our platform stands apart on the market

The only platform combining IAM & SASE

cyberelements.io manages the end to end trust chain, from access management to access infrastructure, applying « by design » zero-trust principles.

Cloud platform deployable in minutes

Create an account in 3 minutes and start delivering your first apps & systems.

Keep control over your assets

Your vital assets (password vault, videos & traces) reside by your side, we run the platform, you keep the keys.

Designed to meet the most demanding security requirements

Stay away from cyberattacks thanks to built-in zero-trust features: Double-barrier, protocol break, random and volatile network ports, connection tunnel with your own key, connection to the resource only at time of use, outgoing flow and no port opening.

Why cyberelements can help you unify & simplify your access security control for all use-cases possible

Remote privileged access (vendor PAM)

Enable anywhere access to workforces (an alternative to VPN)

Secure remote access by 3rd party (an alternative to remote desktop control)

Secure remote access to OT systems (a single solution for IT & OT)
