

kabaun

Carbon Management At Your Fingertips.

Kabaun allows companies to simplify the entire carbon footprint measurement processing chain with tools adapted to all levels of maturity.

Our Solution For Carbon Management

We make it easy for users to use our platform, that's why we provide this benefit.

Security

All information and access will be well encrypted and double security in every activity. Safer transactions, calmer users

Automation

To simplify data collection, simply connect your data through our connectors and API.

Digitalization

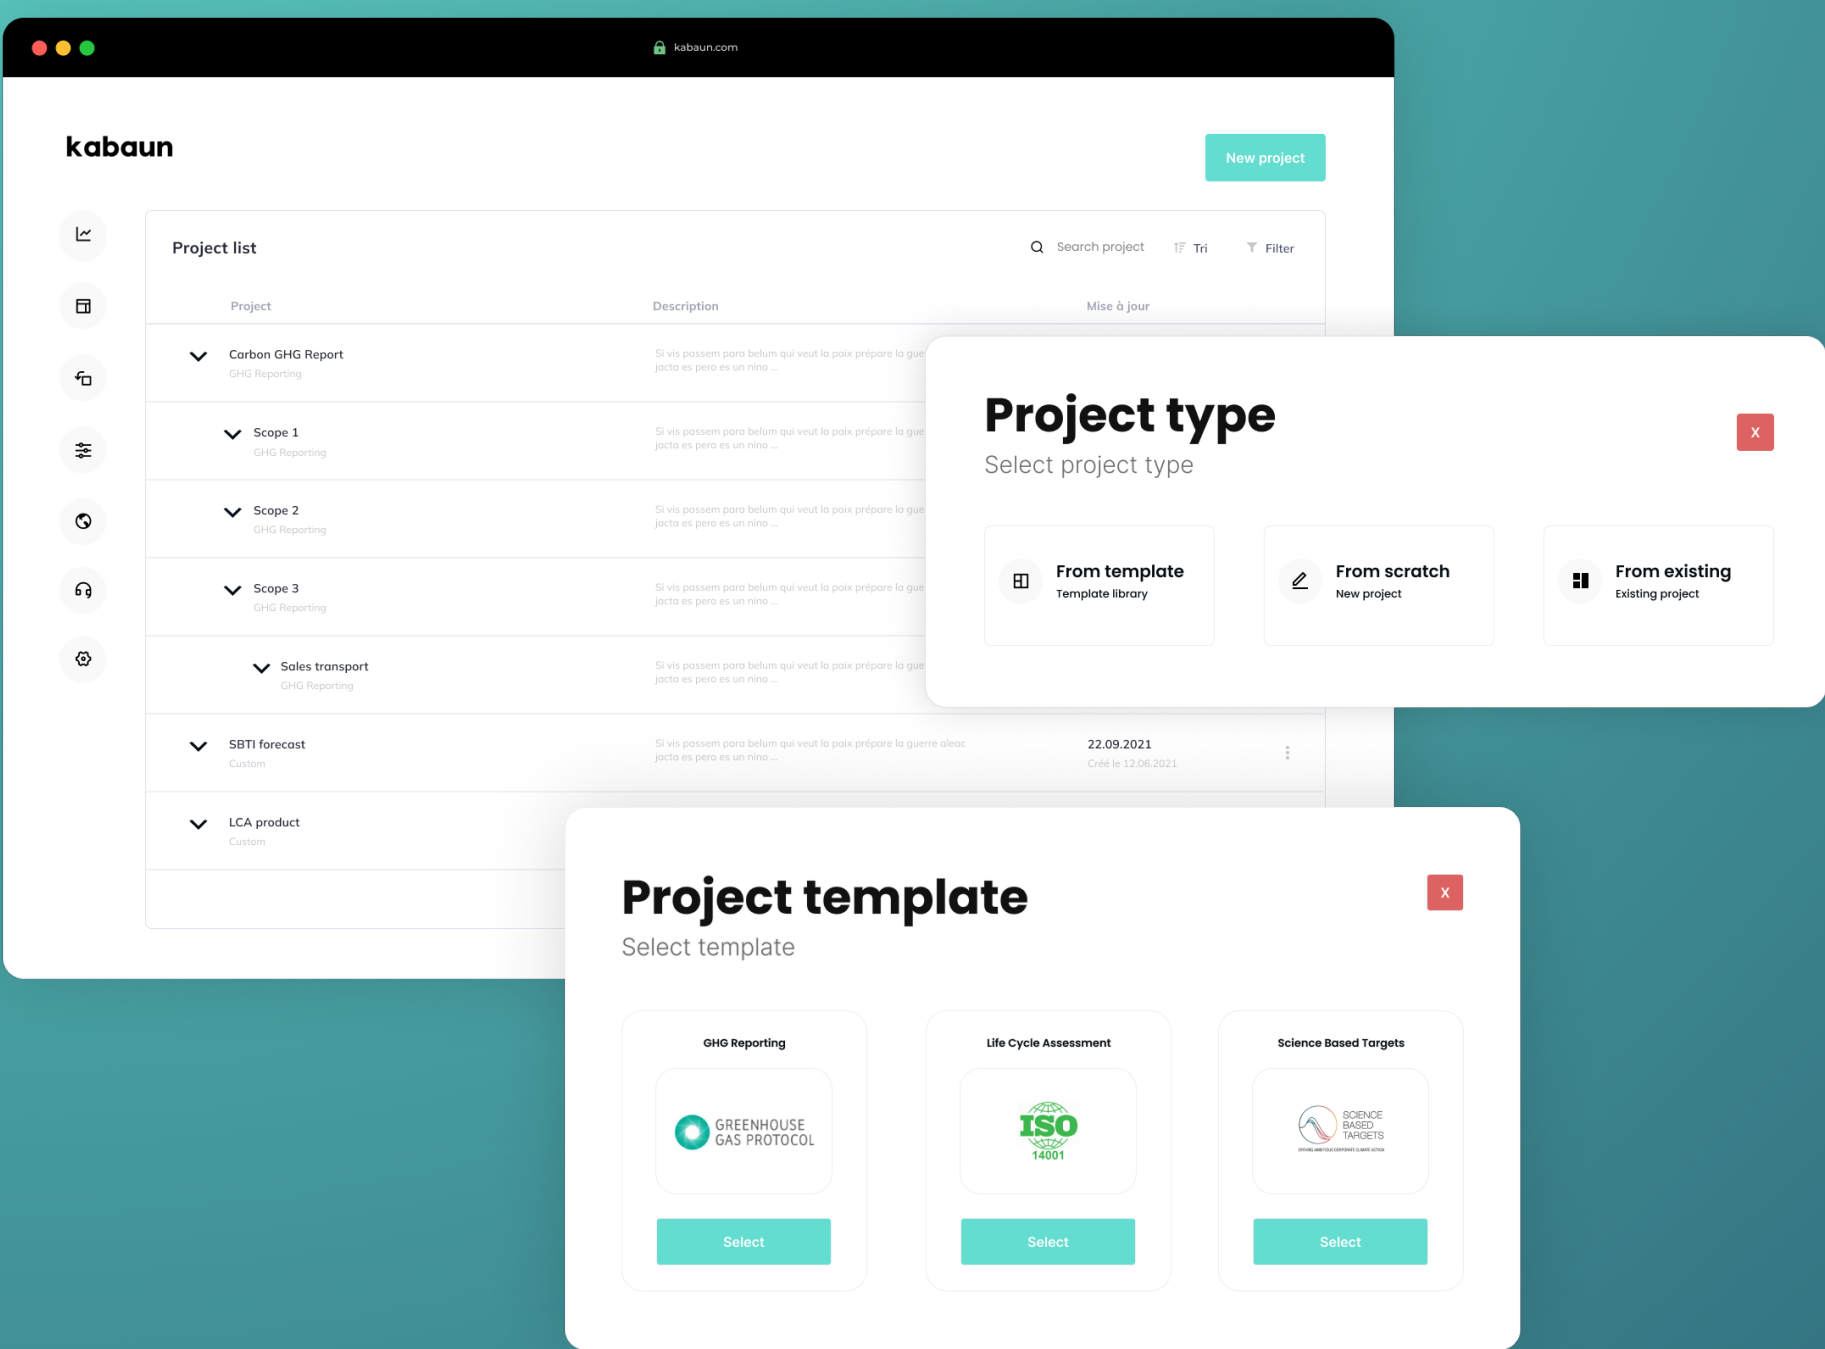

Digitize all your carbon impact measurement projects for easy access to your data.

Tracability

Stay in line with your analysis to ensure a follow-up over time and keep all the details of your calculations.

Easy carbon management

Initiate your carbon footprint in compliance with standards and regulations. A clean and intuitive interface, optimized in its design and built to facilitate the work of all types of users.

Kabaun Key Features

Our platform allows you to build and track your carbon projects within your company. Ease of use and connectivity to facilitate the collection, measurement and analysis of your data.

Impacts

Manage your impacts in complete autonomy.

Calculate and categorize all of your impacts using our certified emission factor database.

Factors

Create your own emission factors.

Build your own emission factors in addition to our certified databases.

Projects

Manage your emissions by project.

A super flexible "hub" platform to manage, classify, categorize and prioritize all of your projects.

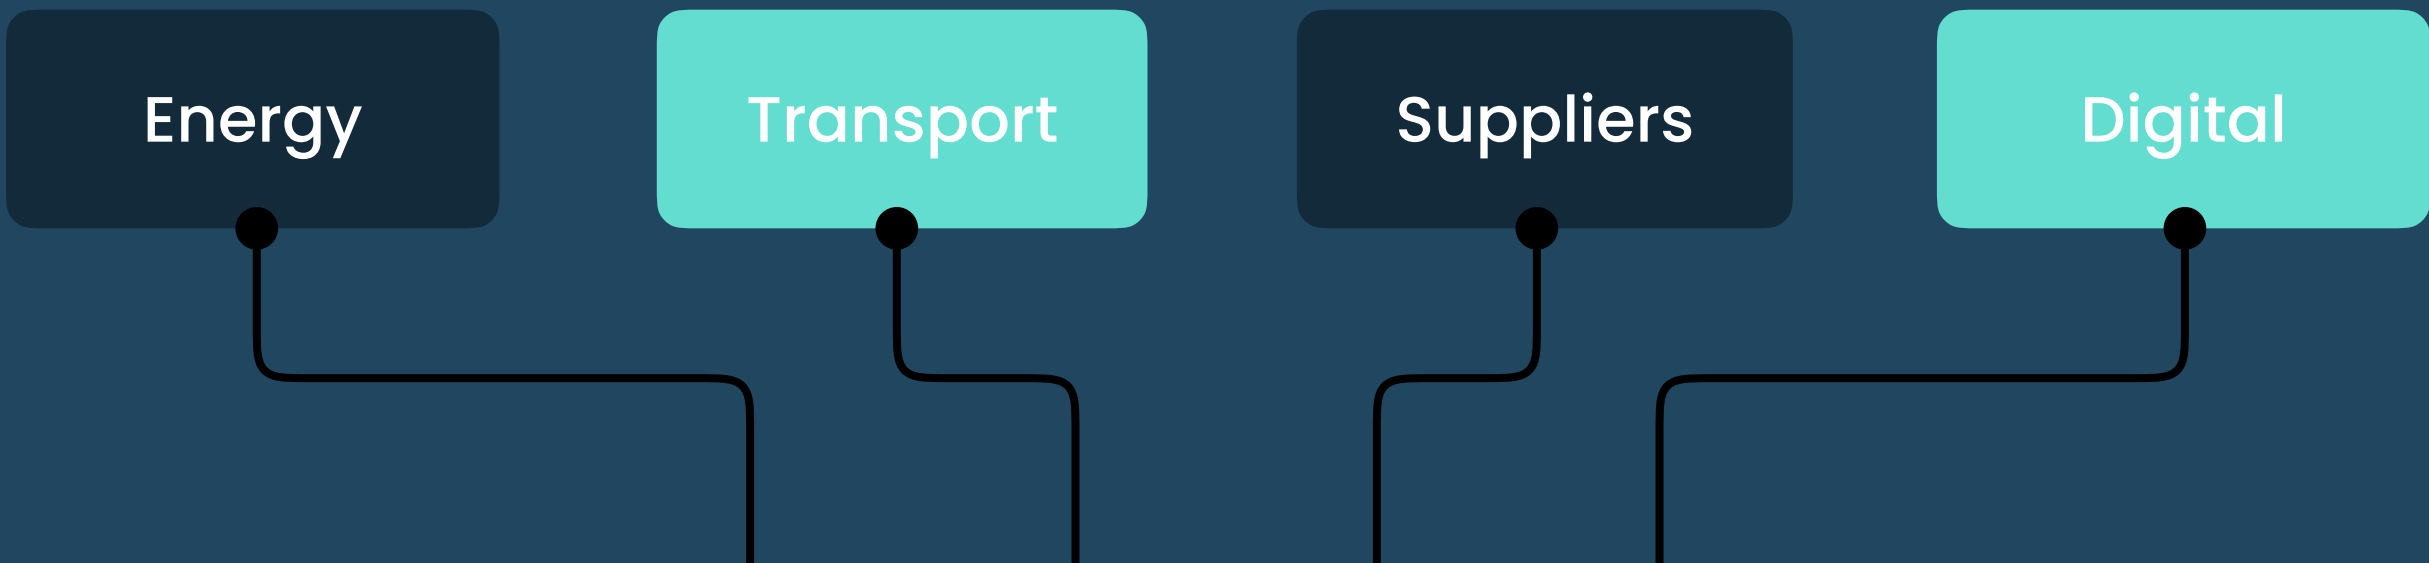

Reports

Keep track and analyze your projects.

Export customizable certified and standards-compliant reports.

Unlock The Power Of Automation

Reduce your technical costs and development times with our API. Access our carbon database directly to communicate or implement your projects internally and for your customers. Kabaun helps you to automate your workflows and automatically display carbon emissions data
