Rhopoint IQ-S

- 20/60/85° Glossmeter
- DOI Meter
- Haze Meter
- Goniophotometer

The Rhopoint IQ-S

The Rhopoint IQ-S is designed specifically to match automotive interior gloss measurement standards

The Rhopoint IQ-S quantifies surface quality problems that are invisible to a standard glossmeter

The Rhopoint IQ-S measures reflected image quality; it is the only hand held instrument that profiles how light is reflected from a surface. Glossmeters are usually used to measure the "shininess" of a surface but are not sensitive to common effects which reduce appearance quality.

IQ-S gloss measurements are fully compatible with existing Micro-TRI-gloss - S results and comes with a ISO 17025 / UKAS certified calibration tile.

The Rhopoint IQ-S can measure:

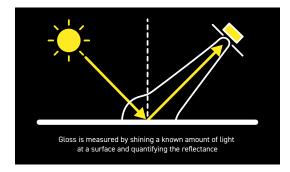

- 20/60/85° Gloss
- RSPEC
- Reflectance haze
- Reflected image quality
- Distinctness of Image (DOI)
 - Goniophotometric curves

RHOPOINT C

What the Rhopoint IQ-S measures - in detail

Gloss

A measurement proportional to the amount of light reflected from a surface.

Geometry: The correct measurement geometry should be used according to the sample finish – matt: 85°, mid gloss: 60°, high gloss: 20°

RSPEC

The peak gloss measured over a very narrow angle.

Usage: It is very sensitive to surface texture and can be used to identify subtle differences in smooth surfaces.

Distinctness of Image (DOI)

A measure of how clearly a reflected image will appear in a reflective surface.

Orange peel dramatically reduces appearance quality without affecting gloss readings. These two test panels measure identically with a standard glossmeter. The Rhopoint IQ-S with RIQ/DOI measurement can quantify the differences.

HOPOINT

Reflected image quality (RIQ)

RIQ is used to quantify effects such as orange peel and surface waviness. This new parameter gives higher resolution results compared to Distinctness of Image (DOI) measurement and better mimics human perception of surface texture, especially on high quality finishes such as automotive.

Symptoms of Poor RIQ: Orange peel, brush marks, waviness or other structures visible on the surface. Reflected images are distorted.

Causes: Application problems, incorrect coating flow, coating viscosity too high/low, sag or flow of coating before curing, incorrect particle size/distribution, overspray, improper flash/ recoat time, inter coat compatibility, incorrect cure times and cure temperature.

On surfaces with haze, halos are visible around the reflections of strong light sources

Low Haze

Higher Haze

Reflectance haze

An optical effect caused by microscopic texture or residue on a surface.

Visible Symptoms: A milky finish is apparent on the surface with a loss of reflected contrast. Halos and patterns can be seen around reflections of high intensity light sources.

Causes: Poor dispersion, raw material incompatibility, additive migration, vehicle quality, stoving/drying/ curing conditions, polishing marks, fine scratches, ageing, oxidisation, poor cleanliness/surface residue.

Haze is a common problem associated with coatings and polished materials. Surfaces with haze have a "milky" finish with a "shallow" reflected image. This important characteristic is directly measured with the Rhopoint IQs.

Reflectance haze compensation

The instrument compensates for reflection from within the coating for highly reflective pigments, metallic coatings and speciality pigments, allowing the haze of any painted surface to be measured.

RHOPOINT C

Features

Measurement

Fast measurement of all parameters. Full on-board statistics with graphical trend analysis and reporting.

| Trigloss | 5 + IQ | 3 |
|------------|---------|----------|
| THENU ACUR | WE | |
| 50o | 60° | 85° |
| 79.2 | 91.9 | 98.4 |
| RIQ | logHaze | Rspec |
| 89.9 | 35.5 | 81.4 |

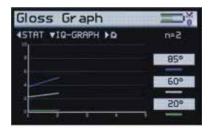

Measurement

Simultaneous measurement of all parameters, results are date and time stamped.

| IQ S | tat | istic | 5 | | |
|------|------|---------|------|------|-----|
| - | -STR | F FIG-0 | RAPH | r | 1=2 |
| RI | Q | logH | aze | Rsp | ec |
| 1.1 | 1 | 21 | 4 | 0. | 8 |
| Max | 0.0 | Max | 12.4 | Max | 0.1 |
| Min | 0.0 | Min | 6.5 | Min | 0.1 |
| Mean | 0.0 | Mean | 9.5 | Mean | 0.1 |
| SD | 0.0 | SD | 2.1 | SD | 0.0 |

Statistics

Displays full statistics for the number of readings in the current batch.

Graphs

Graphical reporting for quick trend analysis.

| Pass/ | Fail | | \supset_{0} |
|---------|-------|-----|---------------|
| 45 47 . | | | |
| Done | | | |
| | Max | Min | |
| 20° | 100.0 | 0.0 | |
| 60° | 100.0 | 0.0 | |
| 85° | 100.0 | 0.0 | |
| logHaze | 100.0 | 0.0 | |
| DOI/RIQ | 100.0 | 0.0 | |
| Rspec | 100.0 | 0.0 | |

Parameters

Pass / fail parameters can be defined for instant identification of non-conformances.

Goniophotometric Curves

Different types of surface textures produce identifiably shaped reflectance profile. This goniophotometric data can be downloaded to PC for further analysis and comparison via the USB cable or Bluetooth Data Widget.

Easy Batching

User definable batch names and batch sizes for quicker and more efficient reporting.

Rapid data transfer

Software-free data transfer. USB connection to PC instantly recognises the device as a drive location which facilitates the quick transfer of files using Windows Explorer or similar.

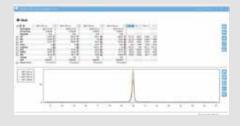

Power

20,000+ readings per charge. The instrument is rechargeable via USB/PC or mains

Direct data input via Bluetooth

Instantly transmit measured readings directly to programs such as MS Excel on your PC / tablet to greatly simplify the reporting process.

Statistical analysis via Novo-Gloss Multi Gauge Software

This software provides an easy means to measure, import and compare data and export the measurements into several other file formats, e.g. PDF, Excel® or CSV.

RHOPOINT

Applications

The DOI, Haze and RSPEC values measured by the Rhopoint IQ-S allow the user to quantify and control the surface textures that reduce the perceived quality of manufactured products.

The meter is widely used throughout many industries to assess the reflective qualities of products, in particular automotive exteriors and interiors.
