

IMPROVE YOUR RECRUITMENT

The quality and efficiency of your recruitment process are essential to the success and growth of your company.

Our job posting and application management solution allows you to collaboratively process all your recruitments with ease and precision.

1. Scheduling

Anticipate your needs and **plan the opening of the positions** to be filled in your existing sites or in the process of creation. **Plan the publication** of the corresponding offers accordingly.

3. Publishing

Publish and advertise your job offers **directly on your website**, on shared portals, or on a **portal dedicated** to your company.

Are you outsourcing your recruitment?

Get your internal teams and recruitment agencies to work together on the same collaborative platform!

2. Authoring

Save time on writing, maintaining and updating your job offers, for all your entities, and in all your languages. **Prepare your content in advance** and make corrections and **mass updates**.

4. Application follow-up

Share and evaluate applications with your team, and keep a complete **history of the collaborative recruitment process**.

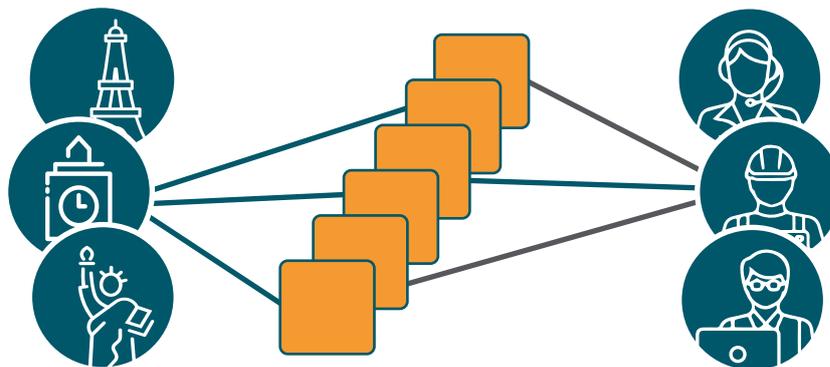

Whatever your **choice of publication**, on one or more portals, in one or more languages, invite your candidates to **apply online in a few clicks**, and manage all your ads and applications from a **centralized space**.

SIMPLIFY YOUR HIRING PROCESS

Our technology allows you to optimize the recruitment process by **controlling it entirely from a single interface**. With its clear and accessible ergonomics, it facilitates the collaboration of all the actors involved in your recruitments.

Automate the writing of offers

Through a combinatorial approach associating types of positions, locations, signs and languages of publication, we divide by 10 the time necessary to write your brands!

Mass update: when you update any part of the offer (city, brand, job title...), it is **automatically propagated to all the offers concerned**.

Diversify channels, centralize management

In order to better target your candidates, our **multi-portal** technology allows you to publish offers on different **websites** and pages, in different **formats** and **languages**. The planning, editing and publishing of offers are done from a single administration interface.
