

DDN Infinia 2.0

The Data Intelligence Platform for End-to-End AI

Unify your data with unmatched scalability, simplicity, and flexibility. Empower the transformation of massive amounts of disparate, multi-modal data from across organizations into business outcomes with DDN Infinia, purpose-built for AI inference, data analytics, model preparation and loading.

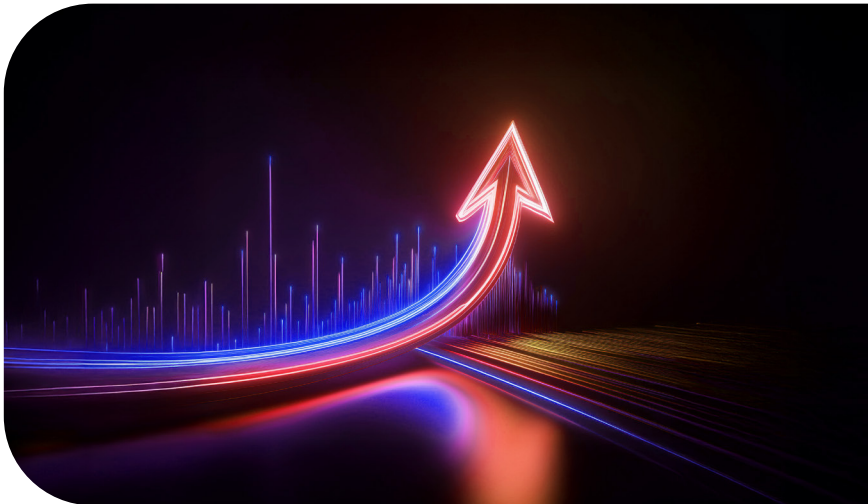

Reduce Complexity and Achieve More Reliable Results

DDN Infinia is a 100% software defined, hardware aware, containerized microservice-based architecture enabling you to work with any data, any application, anywhere.

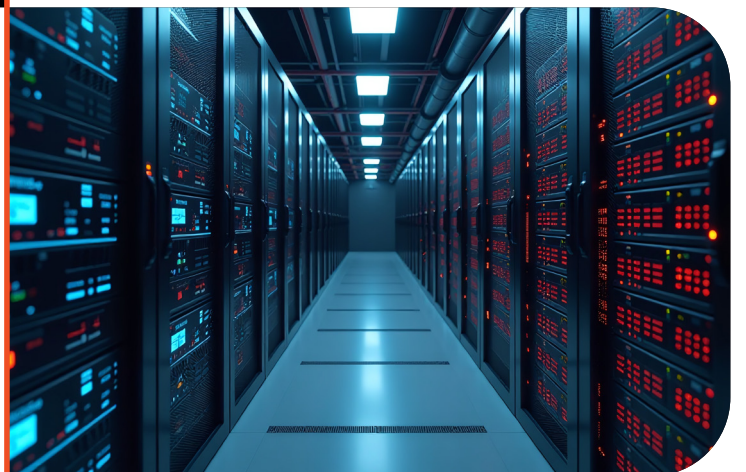

Accelerate Innovation and Delight Your Customers

Speed innovation by reducing the need for data movement with DDN Infinia's advanced metadata engine. When data movement is required, achieve sub-millisecond latency and TBs/second throughput to support RAG-enabled AI inference.

Lower Costs and Rapidly Deploy

Engineered for efficiency, DDN Infinia is supercharging high-density systems that scale infinitely, but responsibly. Keep GPUs running at full potential. Deploy in 10 minutes and save 10x power and cooling costs.

Get Proven Reliability and Trusted Security at Scale

Protect your assets and reputation at any scale with built-in security and reliability features that deliver five 9's of availability. Infinia scales from terabytes to exabytes to support you on your AI journey.
