## THE ALTERNATIVE TO MANUEL TESTING

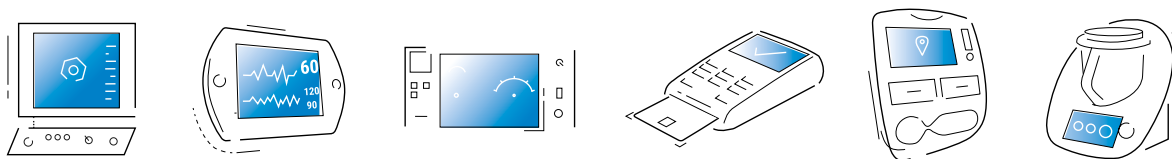

Passionate about quality and innovation, our ambition is to become the leading company in testing solutions and to accompany our clients towards the 4.0 industrial evolution, both in France and internationally.

We have created the eTASQ Motion robot: a solution that is one-of-a-kind, easy to use and allows you to guarantee the quality of your products, by testing them in an automated way and under conditions that are as near to real life as possible.

Whether you work in R&D or on the production line, our range of eTASQ products for automated testing allows you to master your quality, your budget and to mobilise your teams where they are most valued.

## FIELDS OF APPLICATION

## THEY HAVE INTEGRATED ETASQ MOTION
