

DINO BOON

DINOSAURS...AND MORE!

ROBOTIC
TRAVELING EXHIBITIONS

GIANT DINOSAURS

We provide exhibition themes and collections of the most accurate robotic dinosaurs and skeletons customized for your venue. Together we will curate a thematic journey and assortment of life-sized robotic creatures to animate your gallery, along with genuine dinosaur fossils, cast skeletons, and interactives.

Spectacular robots reveal the fantastic mythic giants from the world's different cultures. Dragons are universal, key to the mythology of peoples from Native Americans to the Chinese. Explore what inspires the enormous variation of dragons worldwide – imaginative combinations of living animals from lions to serpents, even dinosaurs!

This amazing fauna is brought back to life with full-sized and scientifically accurate robots – breathing, roaring, gnashing teeth, turning their gaze, and waving their tails. This awesome menagerie is presented by continent – giant kangaroos and marsupial lions from Australia, giant lemurs from Madagascar, woolly rhinos from Europe, North American giant beavers and mastodons, and many more.

Get up close to gigantic, accurate, moving re-creations of environmentally beneficial insects as well as introduced pests from around the world. Huge robotic insects hiss, buzz, click and wave antennae and legs. Stink bugs spray, and dung beetles even roll their balls of poo!

SEA CREATURES

A collection of larger-than-life sea creatures and interactive elements will entertain guests while providing critical mission goal messaging on our living oceans and waterways. Marvel at a full-sized Sperm whale locked in battle with its main food source, the Giant Squid. Stare into the awesome mouth of a giant Leatherback Sea Turtle as it builds a nest for future generations of offspring.
