

# SUPPLIER GOLDEN RECORD MANAGEMENT

- COMPLETE, CONSOLIDATED, AND QUALITY DATA
- SIMPLE & EFFECTIVE GOVERNANCE
- INTEGRATED SUPPLIER DATA ECOSYSTEM

Ivalua's Golden Record for Suppliers equips organizations with advanced tools to seamlessly manage and extend supplier information across their entire technology ecosystem. By integrating data beyond the system's primary source of truth, businesses can ensure consistency, accuracy, and accessibility of supplier information in every connected system. Our robust set of features enables a single-entry point for suppliers and then extends Golden records to Enterprise Resource Planning (ERP) solutions or additional supplier management systems. This ensures accurate data and efficient and effective workstreams across processes.

## Single Source of Truth

Ensure all systems utilize a consistent Golden Supplier Record and synchronize and update these systems from this record within the central supplier repository.

30% of Suppliers

must navigate more than 10 different processes and systems with their largest customers

## Target and Manage Integrated System Landscape

Select specific solutions to extend the supplier record and supplement supplier records to match the data requirements and model of the target system.

Up to 30%

reduction in PO processing costs after implementing an effective master data management program

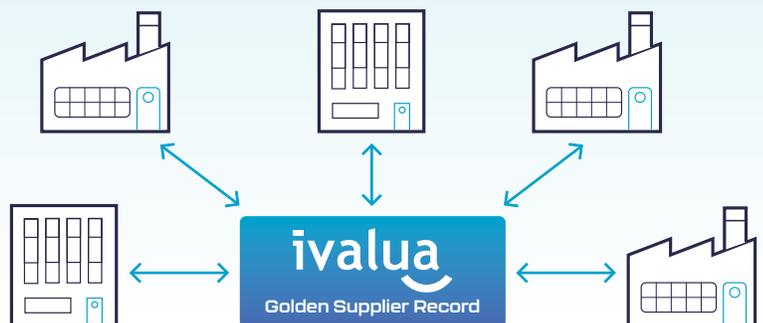

## Select Business Rules and Drive Compliance

Support compliance and drive visibility by establishing unique workflow and approval for each extended solution. Track changes and ensure auditability at the individual system level.

More than 60%

of CPOs see increasing supplier collaboration as top strategy for delivering value

## Manage All Your Organization's Suppliers From A Single Supplier Management Solution

## Collect, Cleanse, and Validate Suppliers

### Centralize Supplier Record

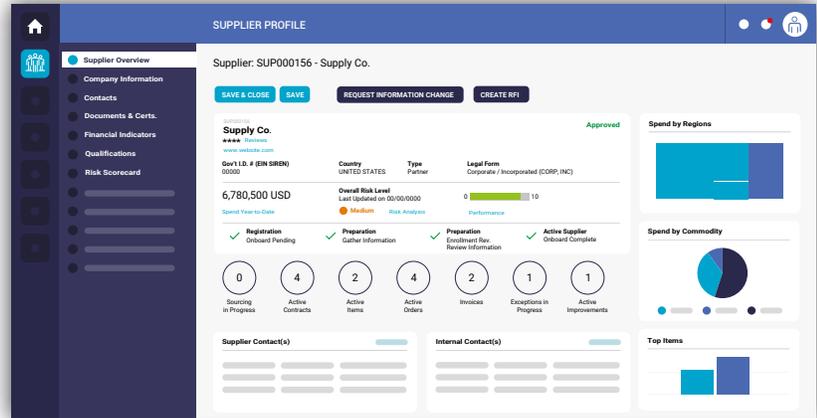

Assemble all supplier records in a central repository with a single comprehensive supplier portal.

### Assess the State of Supplier Data

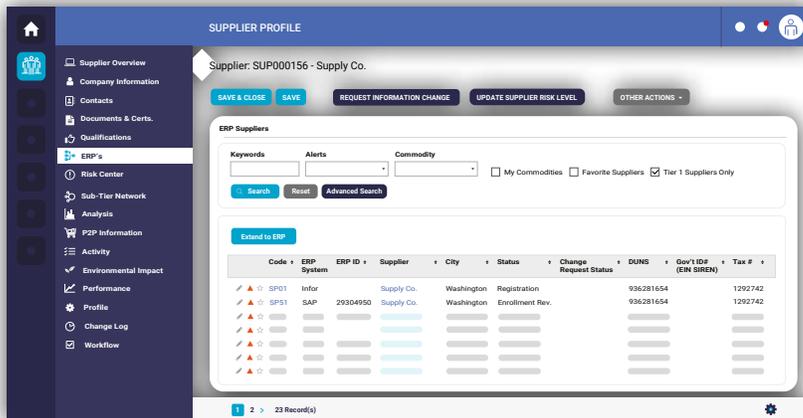

Curate data, identify duplicate records, and expose supplier linkages and hierarchies.

### Target Data Improvements and Enrichment

Merge duplicate records, build corporate hierarchies, and enrich profiles using third-party data.

## Integrate, Target, and Manage System Integrations

### Select Target Systems

Target specific ERP or supplier management solutions via intuitive interface.

### Extend Supplier Record

Share a unified supplier record and data across a targeted ecosystem and manage those integrations.

### Supplement Supplier Data Record

Input additional data to match the ERP / target system data model and requirements.

### Manage Integration Processes

Initiate the integration process between the Golden Record and the target system.

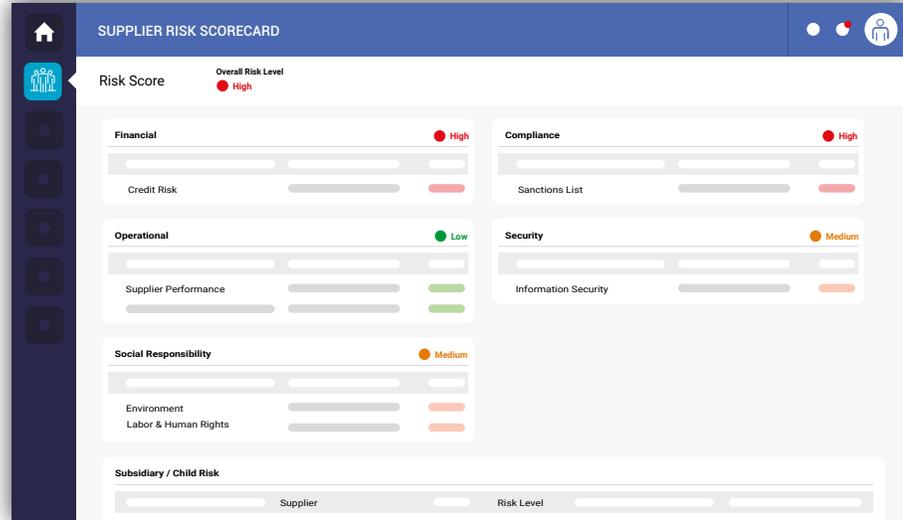

## Establish Process Rules and Drive Compliance

### System Specific Approval

Design unique workflows to satisfy compliance requirements and provide system owners visibility and control.

### Ensure Appropriate Program Compliance

Track changes, measure compliance, and enable appropriate audit controls.
