

Empower Your Business with Works Platform

The Future of Enterprise Software

WORKS PLATFORM

ENTERPRISE NOCODE PLATFORM

Organizational performance is directly linked to the ability to deliver high-quality software swiftly, make continuous improvements, and introduce new features in a timely manner.

Unfortunately, most software projects end in failure: some are canceled, many yield unsatisfactory results, and others are completed but with significant time and cost overruns.

Another challenge is that as businesses evolve, software often lags behind.

In an era defined by rapid digital change, such shortcomings are simply unacceptable.

Introducing Works Platform: an easy-to-adopt no-code solution designed for enterprise-class software. We have addressed the complexity of software implementation, making it simpler, intuitive, and incredibly efficient.

Works Platform empowers business teams to maximize benefits, emphasizing the fitness for purpose of each project, to ensure perfect alignment with intended objectives.

It enables an accelerated delivery pace, significant savings in time and resources, without quality compromises.

Leave outdated software challenges to the past. **Turn The Page**

Laying the Groundwork for Organizational Performance.

Works Platform enables perfect synchronization between the information system and the strategy and business needs of the organization.

Built for Enterprise Complexity:

Works Platform is designed to handle diverse business processes across any sector or domain. With it, you can address intricate challenges and build sophisticated, large-scale, scalable, and mission-critical information systems. Far from being restricted to simple cases or trivial applications, Works Platform is engineered to meet every enterprise demand, no matter how complex.

Build Intuitively, Deploy Instantly

By hiding technical complexities, we've crafted an environment where developing software becomes intuitive and deployment, instantaneous. The outcome? Dynamic applications tailored to your business requirements, that can evolve easily.

Continuous Evolutions, Zero Interruptions

Works Platform allows the continuous delivery of new features and the improvement of existing ones without any interruption. It's a "No Code" with No "Code Generation" platform. It eliminates worries about configuration and inconsistencies.

From Months to Days

By facilitating requirement elicitation, accelerating software implementation, and reducing test duration, you can now expect to have an application up and running in a few days or weeks, instead of months or years.

From Immediate Feedback to Targeted Solutions

Works Platform fosters stronger collaboration between tech and business teams. By jointly focusing on business needs, they can directly shape applications, ensuring requirements are addressed promptly and accurately. Moreover, they can experiment with various implementations of business processes, fine-tune them, and select the optimal solution that best suits business goals and needs.

Slash Costs

Save money with shorter projects, fewer resource costs, and less spending on maintenance costs.

Works Platform was designed for enterprise-level applications. It is perfect for updating your system and replacing old legacy applications, cutting down on Technical Debt."

If you can formulate it, you can build it.

Works Platform is the answer to Developer Scarcity! With No-Code, there's less need for expert developers. Works Platform makes it straightforward. People with various skills and backgrounds can get involved. Additionally, Works Platform breaks language barriers, enabling application development in major written languages.

Consistent Excellence

In the past, the quality of an application largely depended on the quality of its developers. Today, with Works Platform, the excellence of your application is guaranteed by the platform itself. This ensures fewer errors, and if any arise, they're easier and faster to resolve. The result? Software applications that stand out for their robustness and reliability.

Safety by Design

Keen to ensure maximum security for our clients, Works Platform was designed with security requirements from the beginning and not added at the end.

Governance and Citizen Development

In today's organizations, many developments and data are out of control. Through spreadsheets and other tools, functional teams try to address the challenge of having applications or features implemented for them quickly.

Works Platform tackles this challenge in two ways: by amplifying the IT department's capacity and by offering business teams the right environment for their developments.

This empowers teams to create what they need, all while the IT department maintains the control on the Information System.

Broad Spectrum & Specialized Software Solutions

Government

Banks

Finance

Insurance

Legal

Logistics

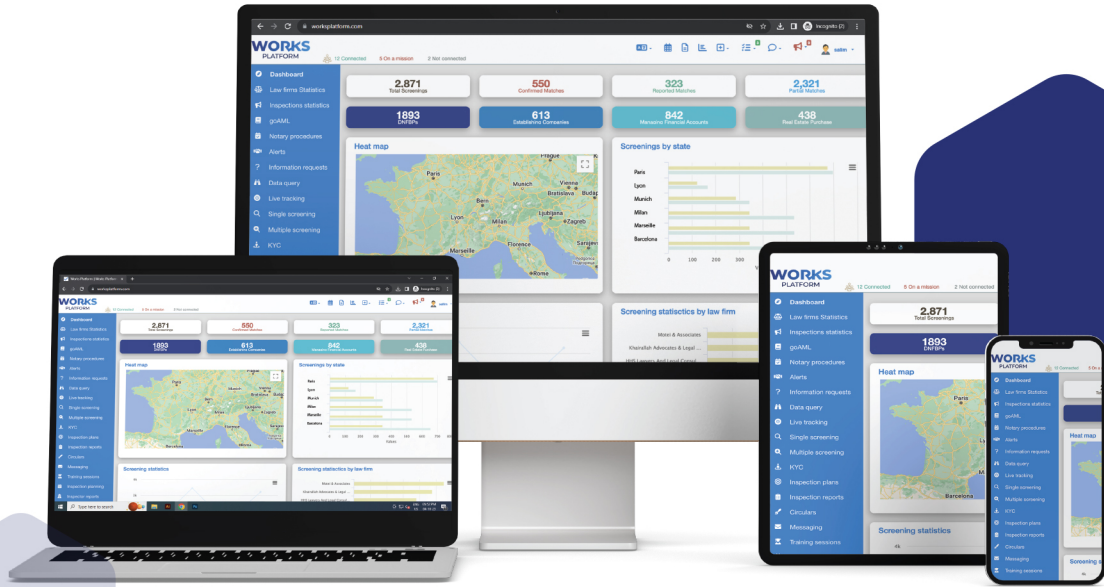

Pension Funds

Works Platform successfully sustains information systems across diverse sectors, from port freight management and social security to legal, e-government, banking and finance.

Works Platform facilitates the development of specialized vertical solutions. Using this platform, we've crafted software tools tailored for digitizing mail streams, Human Resources management, Non-performing loans management, Debt collection management, Litigation management, and a bespoke solution for Microfinance.

All these solutions inherit the benefits of Works Platform, including high adaptability, evolvability and scalability.

Build

- Process & Workflow
- Business rules
- Business components
- Process Interaction
- User Interface
- Repositories
- Organizational charts
- Tasks
- Alerts & notifications
- Proactivity
- Batch processing
- Document templates
- Interim
- Portfolio
- Multi-criteria searches
- Dashboards
- Virtual portals

Extend

- Plugin API
- Connect to external DMS
- Camera Capture
- Document Scanning
- X-Road API

Operate & Supervise

- Performance
- Log Files
- Cache
- Batch scheduling & orchestration
- Services Currently in Execution
- Asynchronous Tasks
- Task Reassignments Traceability
- Thread Traceability
- Incoming WebServices
- Outgoing WebServices
- User Sessions

Mobile

- Build once deploy everywhere
- Native Android and iOS App
- WebView mode
- Responsive web application

Secure

- Users & Roles
- ACL
- Audit trails
- Encryption
- Electronic signature

Interface

- Webservices REST/SOAP
- External SQLDB and NON SQLDB
