

# Algorithmic expertise

---

at the service of  
mastered DS tools  
**ethics in addition**

# What DataTool for AI?

Any tool **fed by data**

and **producing usable results**

in particular within the  
framework of *human activity*

to *perform one or more tasks*

Some examples

- **Data cleaning and treating tools** identifying outliers, fixing errors and filling empty values.
- **Dashboards** allowing to visualize the data in the form of graph or summary KPIs
- **Machine Learning / Deep Learning simulators and AIs** helping or replacing humans in making decision and performing tasks

# Why to document Data Tools ?

- **To master and manage** data tools at any time and in any execution environment with no code knowledge needed
- **To save time and resources** when dealing with bugs and unexpected behaviour, even when the developer's memory is not available

- **To easily provide information on data tool behaviour to any user profile at any time in any use case and execution environment**
- **To highlight and evaluate requirements satisfaction and algorithmic quality in order to value data project teams and their work**

- **To be ready** for compliance with future international regulations to cover **AI tools behaviour transparency** right now !

# DSforDS

## CONTRIBUTION

---

A **SaaS Solution** performing the following tasks

### TECHNICAL DOCUMENTATION

**Reading files necessary** for the operation of a Data tool to be documented and **mapping their full content**

# FUNCTIONAL TEST

Producing a **dynamic test book** for  
**functionality relevance** and  
**development quality audit**

# FUNCTIONAL DOC

**Customizable** and **up-to-date user  
guide** describing data paths and  
**functionnality behaviours**

An **ergonomic interface** for reading and  
**enriching the produced documentation**

We provide **clear, complete and**  
**always up to date documentation for**  
**your Data Tools**
