# SAFE, GUARANTEED, TRACEABLE, RESPONSIBLE, CERTIFIED.

Gold and silver from Gold Chef are not just edible, but they are real food-grade product because they are manufactured following all the food production laws, certified from the possession of the required health authorisation (No. CE IT AAE 090 5). To obtain and constantly guarantee these requests, an entire area of our factory has been dedicated to the exclusive food production.

On the market there are many examples of gold and silver which, due to the alloys used, could be edible, but only very few are really food-grade and comply with food productions requirements.

Our family has been running the goldbeating business since 1600 to produce real gold and silver leaf in the highest quality.
