

Universal Wired Portfolio

Reduce Risk, Increase Agility, and Simplify Operations

Rising complexity, a shortage of skilled IT staff, and ongoing budget constraints challenge organizations to run their networks with agility and intelligence. The right wired solution can deliver the efficiency, performance, and flexibility to ensure a better network experience.

The Extreme Universal Wired portfolio combines industry-leading edge to core switches with unique fabric services, universal hardware, and powerful cloud management to streamline and simplify every aspect of network operations from deployment to support.

Extreme Universal Switches: A Unique Wired Solution

Extreme's Universal Switches provide a unique switching hardware solution that helps streamline operations and reduce risk:

Agile

Select the operating system/ use case. Redeploy the same hardware for new use cases.

Flexible Cloud Management

Choice of cloud or on-premises options streamline deployment and monitoring. Control your migration to the cloud.

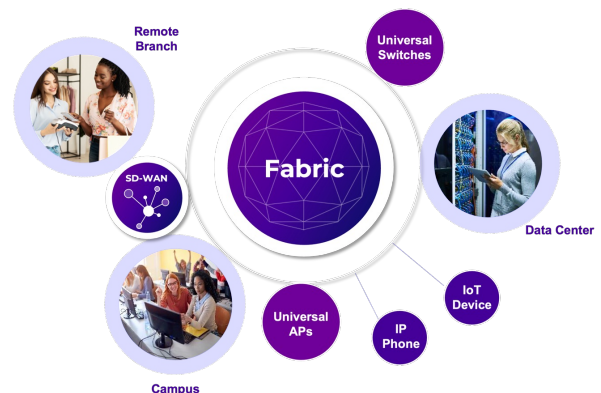

Automated

Speed switch deployment with advanced fabric services and zero-touch onboarding.

Extreme Fabric

Extreme Fabric is integrated into every Extreme Universal switch which provides the following benefits:

- A unified solution that extends across branch, campus and data center
- Built-in automation that dynamically provisions devices and services as they connect to the network
- Seamless operation across wired, wireless and SD-WAN environments
- Secure stealth design that reduces attacks and prevents network breaches

Extreme Universal Platforms

Edge and aggregation switches with user-selectable choice of Extreme operating systems

5320 Series

16, 24, and 48-port models with Gigabit Ethernet and 30W PoE connectivity

5420 Series

14 models with Gigabit and Multi-Gigabit connectivity and 30W/60W/90W PoE

5520 Series

24 and 48-port Gigabit/Multi-Gigabit models with 30W/60W/90W PoE

5720 Series

24 and 48-port 1 / 2.5 / 5 / 10 Gigabit models with 30W/60W/90W PoE

7520 Series

48-port 10Gb and 25Gb copper and fiber models for aggregation & core applications

7720 Series

32 x 100Gb model intended for core applications.

Additional Extreme + Wired Benefits

ExtremeCloud IQ

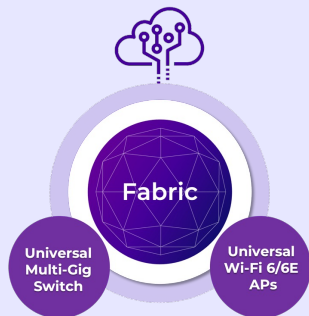

ExtremeCloud IQ optimizes wired operations by automating onboarding and many switch configuration processes. Instant operations and Digital Twin technology further provides proactive set-up, data-driven troubleshooting and advanced device staging.

Services

Extreme Networks Services are 100% in-sourced, 7/24/365 global IT experts ready to simplify your digital transformation.. With proven expertise, Extreme professionals bring 10+ years' experience and deep product understanding to deliver expert help in designing and facilitating your network deployment.

Extreme Wired + Wireless

Together, Extreme's Universal wired and wireless platforms deliver a better network experience through:

- A common management framework with ExtremeCloud IQ
- Multi-gigabit (2.5G/5G/10G) for increased Wi-Fi 6/6E bandwidth needs
- Power over Ethernet (PoE) switch capabilities up to 90W for Wi-Fi 6 and 6E access point (AP) power requirements
- Unified network access control (NAC) policy across wired and wireless environments

Summary

The Universal Wired portfolio is part of Extreme's Infinite Enterprise strategy comprised of One Network, One Cloud, and One Extreme. One Network connects everyone, everywhere – securely through universal platforms – wired, wireless, SD-WAN with security and fabric. One Cloud enables unified management of everything, with AI – for Extreme and non-Extreme wired, wireless, SD-WAN, security, fabric, and IoT. One Extreme provides additional programs that enable customer success and lifetime value.
