Springs and wire forms

Situated since 1975 in Périgord (Dordogne – France), RAPIC moves into a new factory in 2014, acquiring more space and improving production flow as it takes its development forward.

As a result, in addition to ISO9001 and EN9100 certification, the Rapic team is able to offer our customers superior production quality that meets existing standards.

Our growing product offering consists of wire forms of all kinds, with or without a spring function, ranging from the traditional to application-specific multi-wire springs and from soldered frames to flexible guides for round wire (0.2mm to 20mm in diameter) and for flat wire (0.3mm to 2mm).

In addition to unit or large-scale series production of the items you need, our design office is there to offer you confidential support throughout the design process.

Specifically

What our business has to offer is restricted only by your imagination and the physical limitations of your chosen material.

Our output currently divides 50-50 into the full range of coil springs – compression, tension and torsion – and a variety of round and flat wire forms.

Beginning with just a broken item, a drawing of an individual item or a dimensional drawing focused on a specific function, we research your project together. The design tools we use are SOLIDWORKS, together with industry-specific software.

Establishing the function you require early on makes for a simpler and more effective choice from our range of products.

Thanks to our innovative solutions in materials as well as treatments, we are able to work with you to discover the most appropriate technical solution at the most appropriate cost. We can deliver one or more prototypes then move on to pilot production as required.

Prior to series production, we will investigate the possibilities of adapting our tools and machinery to optimize production. We will also ensure the services required to finish your product, e.g. heat treatment, welding, coating and marking. Lastly, all finished products and project decisions are recorded in our ERP database so that traceability is guaranteed.

Strict compliance with your requirements is and will continue to be a priority. The size of our company facilitates a rapid response and our logistics department is always at your service.

Contact

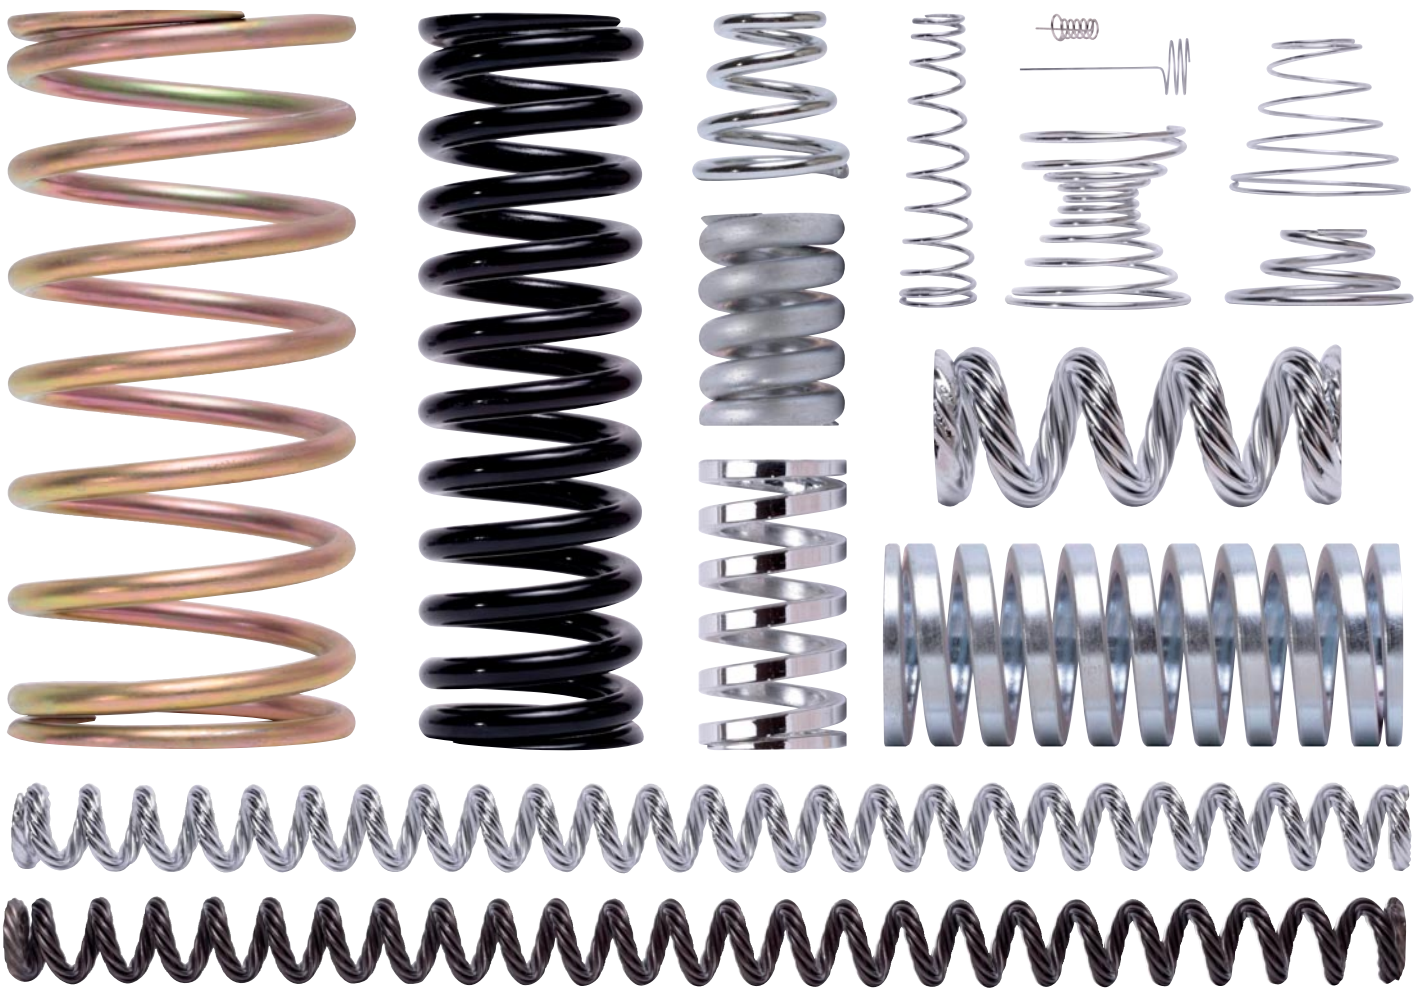

You are welcome to :

- Visit our website at www.rapic.com and fill in the form that matches the product you are looking for.
- Attach a picture or photograph to the form if you don't have precise measurements.
- Send an e-mail to contact@rapic.com
- Ring for more information on +33 5 53 55 10 22
