of consumers are more likely to spend more and buy from a company with a strong reputation for sustainability
(Simon+Kucher)

64%

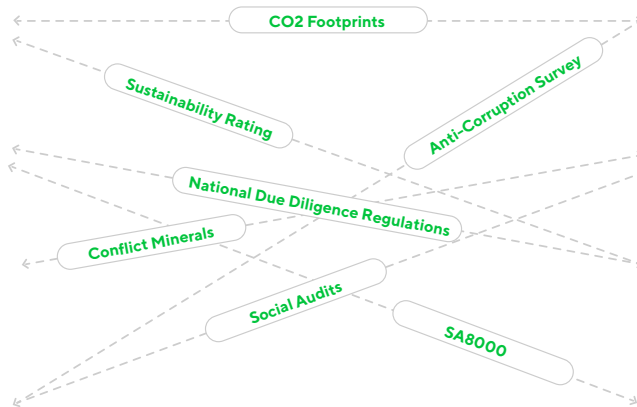

of Millennials will not work for an employer without a strong sustainability policy
(Forbes)

Challenges Facing Global Value Chains

Businesses are facing changing customer demands, increasing regulations, scrutiny from investors, supply chain risks, and rising costs. **Building successful sustainability programs across global value chains is challenging and many companies do not know how to begin.**

Your Company

- Difficulty scaling
- Limited visibility of partners' practices
- Lack of standardized data and metrics
- Lack of reliable validated documentation
- Difficulty keeping partners engaged

Your Trading Partners

- Duplicate efforts
- Skill and knowledge gaps
- Difficulty calculating metrics and sharing data
- Rapidly changing robust reporting standards
- Little feedback for improvement

The **EcoVadis Sustainability Intelligence Suite** is a collaborative and secure global platform which enables you to share information and engage your trading partners to drive impact at scale.

Helping you at every stage of your Sustainable Procurement Journey

The EcoVadis Sustainability Intelligence Suite offers a full product suite dedicated to supporting your organization's progress at every stage of its sustainability journey. We help you to **identify** risks and opportunities, **assess** sustainability practices, **monitor and track** actions, **understand and improve** performance, and **manage** your program effectively. The EcoVadis solution is backed by expertise you can trust so you feel confident **reporting** your results.

Robust Platform:

- Supplier sustainability scorecards
- Dashboards for network views, KPI tracking, and business intelligence
- 360° screening and live news monitoring
- Collaborative corrective action tools

Expert Services:

- Easy and effective program onboarding
- Program management tailored to sustainability goals and business needs
- In-house supplier engagement and support services

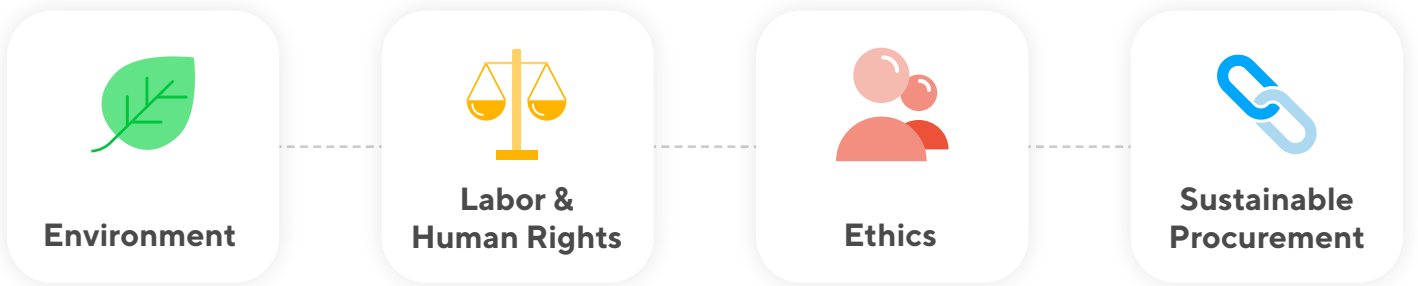

The EcoVadis Methodology and Assessment Model

EcoVadis rates sustainability performance by assessing a company's policies, actions and results, as well as inputs from third-party professionals and external sources. Companies are required to provide supporting evidence which we verify to ensure the results are valid and accurate.

Our methodology is based on a framework of 21 sustainability criteria mapped to global standards, and is guided by an international scientific committee.

Companies receive scorecards covering four theme areas:

Companies respond to an in-depth questionnaire which is customized to their industry, country of operation and size, ensuring the EcoVadis rating is relevant and recommendations are meaningful.
