What is an AI agent?

Definition

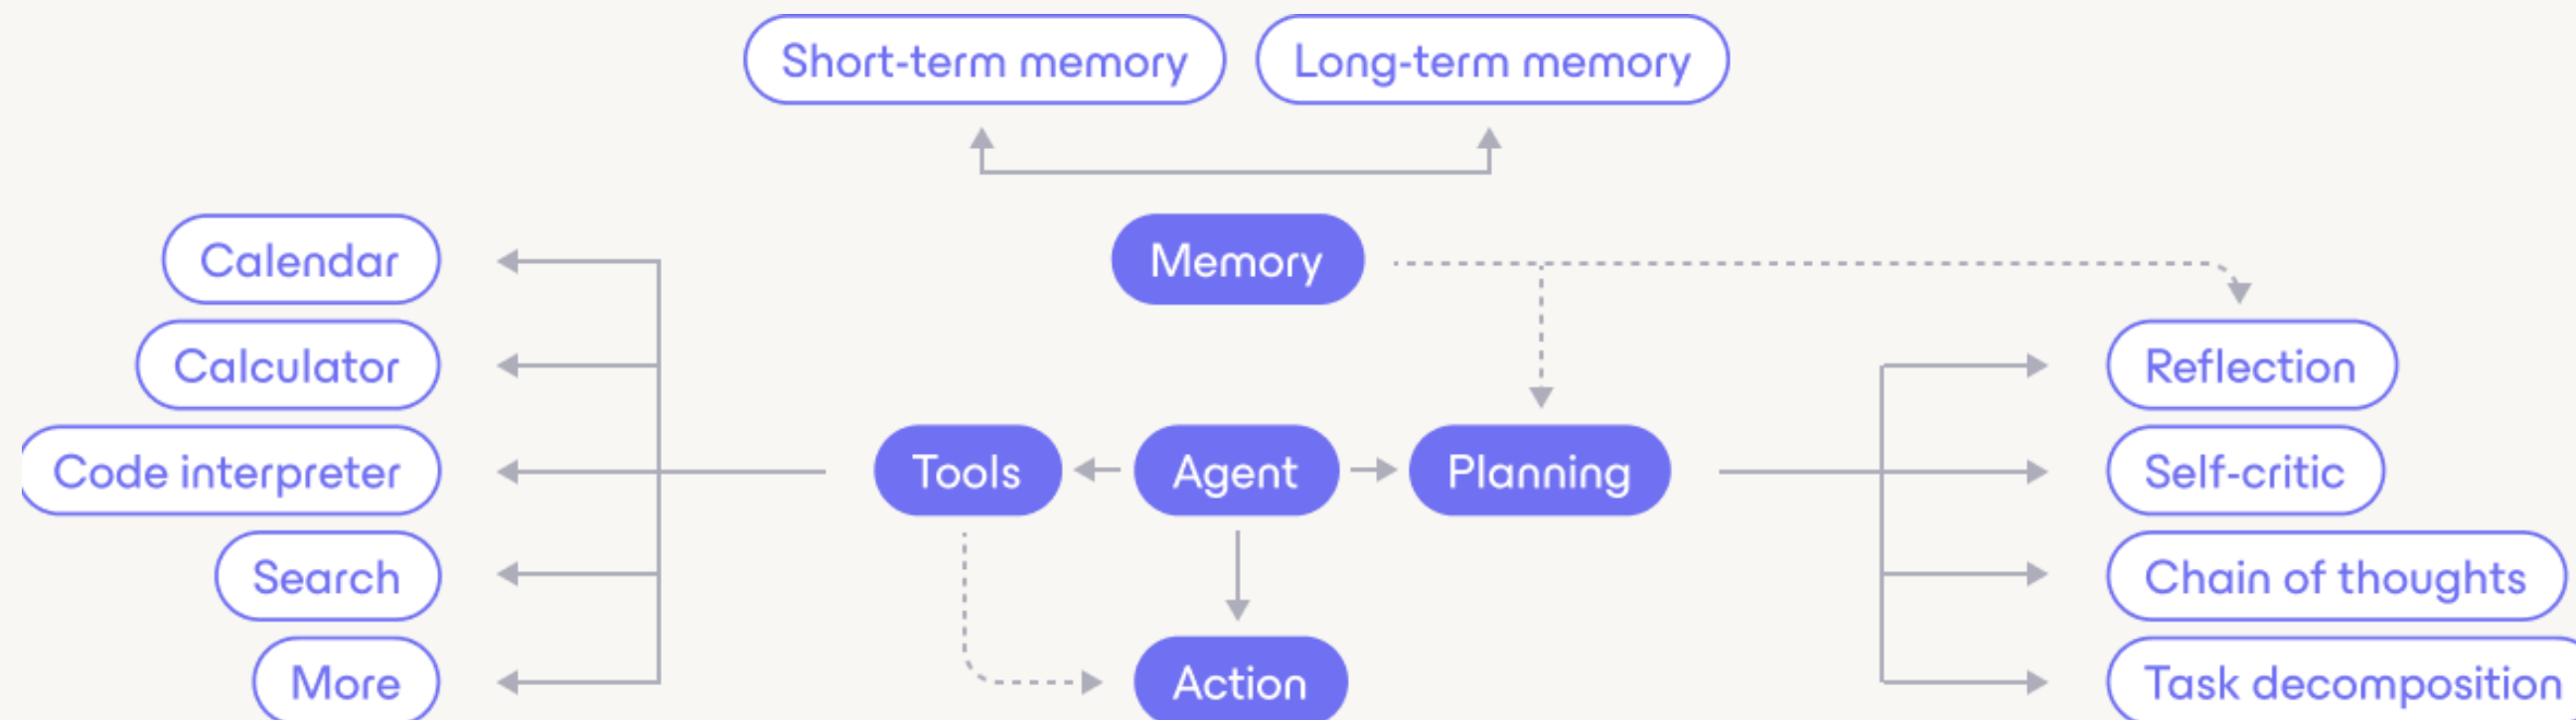

AI agent is designed to autonomously handle a wide spectrum of requests generated by users or systems, ranging from straightforward tasks to more intricate problems.

Capabilities

Agents use AI models and tools like search, calendar, and apps integrations to achieve their goals. They rely on memory to keep track of actions, which include reflection, self-criticism, sequence of thoughts, and task decomposition for well-informed decisions.

AI models

AI agents can use a variety of either proprietary frontier AI models or open-source AI models. The selection of the AI models will depend on various criteria such as tasks, context, budget.

Konverso: A unique self-service platform to cover all your needs

Equip your teams with +30 pre-built AI agents designed for specific, practical applications in sales, IT/ HR, productivity, ...

Connect AI Agents to your team's data and eliminate knowledge silos (SharePoint, Confluence, ServiceNow, Internet..)

Manage data access with precision through a secure, privacy-focused & SOC2 Type 2 platform.

Add tools (30) to your AI agents to give them more impact and capabilities.

Take advantages of Built-in RAG, Vulnerability scan, GenAI models in the EU with Enterprise class SLA

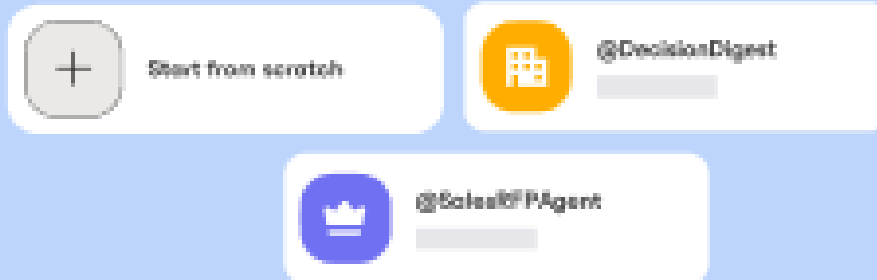

Supervise adoption & usage via our Analytics.

Konverso: Get your AI agents setup in no time

1

Create Ai Agent

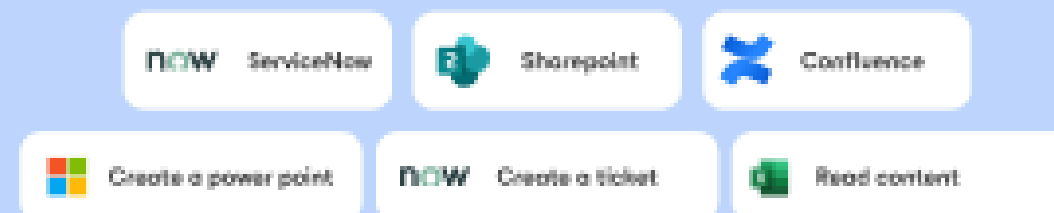

Create from scratch or personalize from our library of pre-built AI agents.

2

Connect to data & tools

Connect securely to your enterprise data and add pre-built tools from our library.

3

Deploy & use

Deploy only to yourself or let others use your AI agents based on permissions.

Konverso: your security is non-negotiable

✔ Protects data at rest

Ensures your data remains confidential even if storage systems are compromised. We use AES-256, a powerful encryption standard, to scramble data into an unreadable format.

🔒 Secures data in transit

Safeguards your data while it's being transferred between systems or devices. TLS 1.2 or higher protocols provide a secure tunnel to encrypt data in motion, protecting it from eavesdroppers.

➡ Precise data sharing

Select exactly what data you want to provide to Konverso from each source. This granular control ensures you share only the information that's relevant and necessary.

✘ Data redundancy

By storing backups in a separate region, we implement data redundancy that strengthens our clients' data reliability, disaster recovery, integrity, performance, and business continuity.

🛡️ Privacy-preserving training

We prioritize your privacy. Customer prompts or data are never used to train our models. This ensures your data is used solely for its intended purpose.

⚙️ Seamless workspace management

Leverage Single Sign-On (SSO) for effortless login to your Konverso workspace. Easily invite multiple users to your workspace in batches, streamlining team onboarding.

Leverage 30 templates or create your AI agent from scratch

@MeetingRecap

Agents that leverage meeting transcripts (Zoom, TEAMS, Google,..) to generate meeting notes the way you want.

@ColdEmail

An email specialist AI Agent focused on first customer interaction automates and enhances communication between businesses and clients.

@Summary

Agent that summarizes text, responses, conversations.

@WebSearch

Agent that helps with your general questions and generate response from the web.

@SalesRFPAgent

Agent that replies to specific questions from a Request for Proposal (RFP).

@CustomerSupport

Agent that answers any questions regarding your products and services

@ITExpert

Agent that knows everything about IT issues and can answer questions based on its knowledge.

@SalesQ&A

Agent that answers any questions related to your product, services, pricing, terms & conditions, partners, clients & resources.
