

ENERGIENCY

ENERGY INTELLIGENCE FOR MANUFACTURING

Decarbonize factories by leveraging Human Intelligence & Artificial Intelligence

OUR OFFER

3 plans tailored to your energy management maturity: from user-friendly energy monitoring to start your project, to advanced AI driven analytics to push your limits.

Energiency is an industry 4.0 technology that supports manufacturers in rapidly detecting and achieving new and sustainable energy & CO2 savings by leveraging existing data in real time with its innovative analytics software, mixing HI & AI.

Our aim: enable your teams to achieve new energy & CO2 savings up to 15% in less than 1 year thanks to shop floor operational excellence in your daily energy management.

FEATURES & BENEFITS

- Create the link between energy and activity data, set up relevant KPIs and connect the data in real time to our analytics software.
- Design your ISO 50001 analytics software and set up your own personalized dashboard, alerts & reports.
- Reveal the energy & CO2 savings potential.
- Create sharp AI models to set up dynamic ISO 50001 compliant energy consumption baselines.
- Automatically allocate and report in real time the CO2 footprint (Scope 1, 2 & 3) by product, batch, ton, unit, etc.
- Team up with our Energy Managers & Data Scientists to implement actions & make your project a success.
