Average weight

AS MANY COWS AS THERE ARE REGIONS, ... AND AS MANY SIZES!

At Agritubel, we are close to breeders and their livestock and are well aware that, similarly to our regions and landscapes, not all cows are similar. Even on a single farm there are larger and smaller ones. The horns are also a major criterion when choosing equipment, for hornless breeds and those with little or long horns.

That's why Agritubel's range of equipment offers a variety of choices for head locks and racks, cubicles, panels and gates and their options, with fine-tuning possibilities during assembly, so that your facilities are perfectly adapted to your needs, and first and foremost to those of your livestock.

**SUCKLER

Agribubel

THE AGRITUBEL ADVISER AT YOUR SERVICE

With its 20 advisers in the field, Agritubel gives you local advice from **a livestock expert from your region.**

Your livestock equipment dealers are privileged Agritubel partners. They have equipment in stock, especially for pastures. Above all, they are a valuable asset when reviewing your building project designs.

Agritubel provides your dealer support covering all technical, commercial and standards-related matters.

This team has all the knowledge required to design your project:

- **perfect knowledge of your farm and your issues**
- **perfect knowledge of the Agritubel product lines, equipment, accessories and available options**

WITH CHARLIE, AGRITUBEL TAKES YOUR LIVESTOCK FARM TO THE NEXT LEVEL

At the review and design stage, it's **a precious tool to test one or more equipment hypotheses**, raise objections, anticipate questions and put every chance on your side to **make the right decisions**. Your cowshed is a work tool that will last for many years and deserves **well thought-out equipment**.

Once all the equipment has been selected, the software's intelligence will be able to **produce an accurate list of all the parts needed** to complete the project. Firstly, it **guarantees the accuracy** of the estimate in terms of pricing and then also **eliminates all risks** of missing parts and incomplete orders that could disrupt or delay the work.

Your project visible in 3D

Using the **CHARLIE** software developed by Agritubel for its customers, your adviser will be able to take into account the **exact measurements of your building**, select the **tubular equipment suitable for your project**, your livestock and livestock management, and generate an immersive 3D model that will let you **see yourself in the finished building** as if you were there.

DAIRY FARMS

A herd of brown and white cows is walking along a paved road in a lush green landscape. The cows are in the foreground, and the background features rolling green hills and dense trees under a blue sky with light clouds. The scene is bright and sunny.

& OTHER DAIRY BREEDS

The three-position head lock adapted to the morphology of hornless dairy cows wearing automatic feeding management collars.

The triangular design of the static part of the head lock creates two passage areas for the cow's head. Depending on its position and locking, the pendulum determines the three possible head lock positions:

The head lock that does more

The 3rd position has two new benefits compared to a conventional head lock:

Freedom to feed

Cows can feed freely in front, to the right and to the left, without being stressed by restraint. The farmer gets a better ration intake, which is the base for zootechnical performance.

Choke limiter

Cows that fall cannot have their head jammed like in a funnel.

The "A" position facilitates the animal's exit through the bottom part.

"V" entry position

This is the natural position at which the pendulum returns to equilibrium. It invites the cows to feed by passing their head through the top.

"I" closed position

Locked is the position that blocks the animal at the feed table. It lets the animal move the pendulum aside by the top or bottom.

Self-service position and "A" clearance

The pendulum moves away to the side and opens wide at the bottom to facilitate the animal's release.

The FIABILIS head lock, the dairy farmers' choice

- Model manufactured using \varnothing 60.3 and \varnothing 42.4 tubes
- Top locking using a built-in sliding shaft
- Pendulum articulation ringed and reinforced using flow-drilling
- Individual locking of each position
- Length adjustment using stands at ends of the panels
- 3-position operation. "V" entry, "i" lock, "A" clearance and self-service
- Automatic pendulum return
- Head blocking feature
- Automatic feeder collar safety
- Noise damper
- Central reinforcement tube as standard

AVAILABLE IN 2 VERSIONS:

FIABILIS "PER" head lock

Panels with adjustable neck, the safest to use (preferred by breeders).

FIABILIS "PEF" head lock

Static neck panels

|| Fiabilis is more than just a head lock, it is a dairy farmer's everyday tool. ||

More comfort and safety

Central control with return preventer safety feature

100% blocking, with mechanical parts inaccessible to the animals, for the farmer's peace of mind. Once the animals are blocked at the trough, the farmer has complete freedom to enter the cowshed safely, to put down straw, clean, inspect or care for the cows.

Individual cow blocking

The locking design lets farmers easily unlock the panel collectively or individually for each animal.

Top-end design

Fiabilis has all the most modern technical advantages as standard: noise-reducing polymer shock absorbers, silent sliding shaft locking systems and a ringed joint reinforced using flow-drilling (patented AGRITUBEL process).

"This is the most cost effective solution for heifers"

More places

With more space per linear metre, this head lock has a benefit in terms of profitability when equipping buildings reserved for young cows, which do not justify the same level of investment as high-productivity cows. It allows a higher load.

Learning

The heifers will be able to learn the entry/exit movement and experience the head locks before moving to the productive building fitted with adult head locks. It guarantees peace of mind and therefore safety for both the cows and the breeder.

Stands shipped with Fiabilis and Securit head locks

Agribol

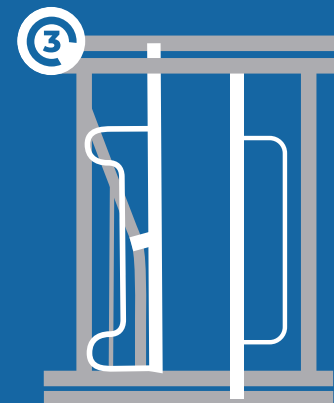

Operation:

Fully open
To provide maximum width for the head passage in the top and bottom parts.

Locked
For a more comfortable position at the feeding table, letting the neck extend to take advantage of the full ration.

Tightened lock
For maximum safety.

HEAD LOCK

BOVILIB

PRIM'HOLSTEIN

MONTBELIARDE

NORMANDE

SIMMENTAL

BROWN SWISS

JERSEY

& OTHER DAIRY BREEDS

The BOVILIB double sliding frame head lock was developed alongside farmers. Providing both the highest safety and flexibility of use, it is particularly appreciated in selected breed farms.

Choice of neck width

The removable, sliding double frame makes it possible to vary the neck between 6 positions.

Maximum safety

The fully open position gives self-service access and reduces the risk of accidents.

Flexibility and fluidity

The double frame slide system is completely fluid and easy to handle. It can be used continuously and effortlessly depending on the needs.

HEAD LOCK

BOVILIB

A unique two-control system that is easy to use and perfectly protected from the animals.

- The pendulum locking and release is controlled by a two-position handle.

- The sliding frame is controlled by a lever at the end of the panel, making it possible to adjust the width to 6 different neck sizes:

16 - 19 - 21 - 24 - 27 cm

+ a maximum clearance position.

|| A high-end head lock for my champions. ||

HEAD LOCK

BOVILIB

The right neck width for younger animals, the right neck width for adult cows, BOVILIB adapts to your animal sizes.

*Age given as an indication. Breeders must select the panels corresponding to their animals' girth.

Top entry "head up"

The absence of a structure at the top of the panel allows the cows to enter the space upright, head up, without having to learn how to turn their head to enter and exit. It also allows horned cows to enter without hindrance.

HEAD LOCK

DAIRY PVB

PRIM'HOLSTEIN

MONTBELIARDE

NORMANDE

SIMMENTAL

BROWN SWISS

JERSEY

& OTHER DAIRY BREEDS

**For horned or hornless dairy breeds.
Especially appreciated in the PGI zones, it is an essential
and historic reference in the Nordic countries.**

**Bottom
locking**

The technical concept of this head lock makes it original. This system without a top structure houses all the locking devices at the bottom of the panel. Thus the animal withers and ears never come into contact with the lock mechanism. This head lock is extremely safe for the animals, even particularly heavy and powerful cows.

AgriTubel

It makes it easier to identify the animals and their behaviour, and better detect heat.

**HEAD LOCK**

DAIRY PVB

Maximum visibility

This head lock has been designed to give farmers the best possible view of their livestock.

Easy passage for the farmer

The stall housing can be accessed by simply stepping over an open space.

Access to the animals from the feed alley

The Dairy PVB head lock makes it possible to act on the neck and back of the animals from the feeding table without having to enter the stall housing. It is ideal for the application of external antiparasitics, for example.

Easy and safe individual release

It is operated effortlessly using a stick or a pitchfork to unlock the pendulum and raise it using its ring, all without the hands approaching anywhere near the horns.

Specifications

- Model manufactured using Ø 60 and Ø 42 tubes
- Adjustable end fitting to vary the length
- Spacing between the diagonal bars: 0.40 m
- Central stiffener shipped with the 3 m, 4 m, 5 m and 6 m panels (must be embedded)

SELF-SERVICE PANELS MBO

MBO diagonal bar panels are the best compromise between simplicity/robustness/ease of head passage. They are suitable for dairy farms that do not need to restrain cows at the feed table using head locks. These models are to be preferred on farms where a full ration is distributed.

MBOs are available in two versions, with either 50cm spaces for adult cows or 40cm spaces for heifers.

They provide the classic animal containment functions during feed distribution.

- Separation of the free stall housing or straw-bedded area from the feed table in order to keep it clean, thus limiting refusals and wastage.
- Regulation of cow movements at the feed table to provide even ration intake by all cows, thus limiting dominance effects.
- Effective stall housing closure so that no animals can cross the feed table. The gap between the bars and their diagonal shape prevents cows and even heifers from passing in any situation.
- Central reinforcement on each panel for extra rigidity*

(*) must be embedded

The cubicles are positive for dairy farms.

- Maximum comfort for the cows with individual places to lie down and chew without being disturbed.
- Better individual monitoring.
- Better general health (hooves and udders).
- A drier rest area makes it easier for the animals to enter and lie down, prevents slipping and makes it easier for them to exit.

CUBICLES

FOR DAIRY COWS

Cubicles: an item of equipment that has evolved and spread rapidly on farms to improve dairy performance, general cowshed cleanliness and reduce the need for straw bedding.

Our range of cubicles has been designed and developed with users in mind to provide maximum comfort and safety for the animals. The different ergonomic shapes of our models are suitable for all sizes of dairy breeds. Our models can be used with both Jersey and Simmental breeds.

3 families of Agritubel cubicles

- Post-mounted cubicles - Adjustable height
Agriconfort - Madison - Germania - Euronorme - Qualitagri
- Height and width adjustable cubicles
Madison - Germania - Euronorme - Qualitagri
- Static cubicles for embedding or plate mounting.
Cordoba - Madison

|| Since I installed Agriconfort cubicles, my cows lie down more often and are calmer. ||

CUBICLES ON ADJUSTABLE HEIGHT POSTS

AGRICONFORT

Suitable for all large and small dairy breeds, this cubicle is the most popular with today's livestock building standards. It can be installed in all buildings and can accommodate all types of bedding. During its development, it was tested for extended periods of time in several farms across Europe.

The height adjustment makes it possible to use different mat or mattress bedding models.

This cubicle's ergonomic shape does not cause contact with the animals, and eliminates the risks of bruising or injury.

The AGRICONFORT cubicle is popular for high performance herds.

Agriconfort

AGRICONFORT

Height adjustable, it can be mounted on posts in a single row, facing a wall, in a double back to back or face to face row, with the addition of a sinusoid "comfort type" wither bar.

GERMANIA Ø60 mm - thickness 3.2 mm

Their shape and thickness make these products provide high quality and strength for large breeds: Montbéliarde, Normande, Simmental, ...

It is especially appreciated by German farmers.

GERMANIA Adjustable cubicle

863851

Germania side wall, length 2 m

HEIGHT ADJUSTABLE POST MOUNTED CUBICLES

MADISON Ø60 mm - thickness 2.9 mm

This model is designed for adult cows and has a large front clearance, making it easy for animals to get up and lie down. It lets the cows turn their heads inside their cubicle. This model is mainly used for Prim'Holstein herds.

MADISON adjustable cubicle

863660

Madison side wall, length 2 m

HEIGHT ADJUSTABLE POST MOUNTED CUBICLES

EURONORME Ø60 mm - thickness 2.9 mm

This model has long proven its worth and offers maximum space for cow comfort. Its simple shape and sturdiness are suitable for small and large dairy cows.

Ref.

HEIGHT AND WIDTH ADJUSTABLE CUBICLES

MADISON GERMANIA EURONORME QUALITAGRI

These cubicle models can also be fitted to gates made with round or square tubes. This assembly makes your layout scalable, making it possible to adjust the width from 1 m to 1.30 m per place.

The technical advantage of this assembly is that it optimises the number of square metres per animal lying down. There can be different types of livestock in the same building: cows / dry cows / heifers and the building use can even be changed without changing the cubicles.

PARTITION PANELS FOR CUBICLES

LV2 PANEL ON CUBICLE

To manage and separate batches of production or dry cows. Without having to rebuild the building.

This equipment makes it easy to create a division in the row of cubicles, creating a barrier that can be opened from either end, and in any direction, by hand, just by removing the two pins on the side to be opened.

LV2 PANEL: 2 size 60 tubes

with fixing clamps at both ends. Frame with static + variable part to exactly adjust to the distance between the cubicles when installing.

AgriTool

PARTITION PANELS FOR CUBICLES

LV2 PARTITION PANEL ON A GATE

Upward sliding partition panel system to create a static division in the row of cubicles. Installed on posts to be embedded or mounted on a plate. The panel is effortlessly raised and lowered using a perfectly smooth system consisting of steel counterweights, galvanised steel cables and pulleys on wear-proof bearings.

It is operated manually and remains naturally balanced in the assigned position (open or closed) without locking, as animals are unable to open it.

Ref.	2-TUBE PARTITION PANELS

PANELS AND GATES

VARIABLE LENGTH FOR DAIRY HOUSING

Agritubel has a range of tube systems for housing design, space delimitation, animal and human flow patterns, with constant attention to the comfort and safety of all.

They have a variable length section, and are easy to assemble and adjust to your building.

PANELS

They are suitable for separating batches of animals and allow occasional opening. They open in both directions and at both ends. They are fixed to walls or on posts using various suitable accessories.

GATES

Easier to use for routine passageways, the barriers are available in self-locking or manual versions. They are best used for the protection of building gates, movement corridors and the waiting area.

The 3-tube models are the most lightweight and easiest to handle. The panels are recommended for horse breeding or as gate protection. They are recommended for small cows and are also suitable for horses. The gates are fitted with a 28 diameter bolt with a non-return system.

Available fronts:

- Drinker space (nozzle and trough)
- Workman access with built-in gate.

FOR DAIRY HOUSING

L.V.4 MODELS

The LV4 models, consisting of 4 superimposed tubes with 363mm spacing, are suitable for all dairy breeds. The animals can pass their heads without getting stuck.

They are recommended for cow alleys, milking parlour waiting areas and isolation (insemination/calving) pens.

They are available in lengths from 1 to 7m with a standard 1.70m variable length front for adjustment. The LV4 models offer a wide range of configurations, drinker spaces, built-in gates, etc.

CONFIGURATIONS THAT SIMPLIFY FARMERS' LIVES

Design your gate or modular panel using the different configurations depending on your buildings and activities.

■ To integrate with the building's equipment:

- Drinker space on nozzle
- Wall or post mounted drinker space

■ For farmer safety:

- Worker access

■ To control the flow:

- Calf passage
- Cow passage with double gates
- Cow passage with adjustable gate

■ For safe animal care:

- Insemination head lock space

Successful dairy farming
begins with good calf rearing

CALF REARING

The future performance of cows is impacted by their diet and health from an early age.

- Avoid shortages, give them all the required ration.
- Isolate from microbial activity, promiscuity and dirt.
- Ventilate and point the pens to the east.
- Have the calves ruminate as early as possible to stimulate the development of their future intake capacity.

Calf equipment is built using the same concepts as for adult cows. It is sized to suit small sizes and designed to let you achieve your breeding performances.

PARTHENAISE

The safest head lock in the Agritubel range, very popular with breeders of thick-necked livestock. It provides an adjustable neck passage and a unique full head release function by the opening of the sliding frame. Small or large, Bovilib adapts to all breeds... and all ages of cattle with or without horns.

Choice of neck width

The removable, sliding double frame makes it possible to vary the neck between 6 positions.

Maximum safety

The fully open position gives self-service access and reduces the risk of accidents.

Flexibility and fluidity

The double frame slide system is completely fluid and easy to handle. It can be used continuously and effortlessly depending on the needs.

HEAD LOCK

BOVILIB

A unique two-control system that is easy to use and perfectly protected from the animals.

- Pendulum locking and release is controlled by a two-position handle.

- The sliding frame is controlled by a lever at the end of the panel, making it possible to adjust the width to 6 different neck sizes:

16 - 19 - 21 - 24 - 27 cm

+ a maximum clearance position.

|| A high-end head lock

*Age given as an indication. Breeders must select the panels corresponding to their animals' girth.

This model has been very successful for suckling and dairy cattle. Its main advantage is it prevents the animals from accessing the locking mechanism: the sliding shaft is embedded in the upper part of the pendulum.

Optimises the building

A cost-effective solution for the building, it makes it possible to optimise the number of spaces per linear metre.

For the cows ... and their bull

The bull space is specially designed with a wider neck, reinforced tubes, and opens in both directions.

Head lock with noise damper

The sliding shaft locking head lock.

*Age given as an indication. Breeders must select the panels corresponding to their animals' girth.

Top entry "head up"

The absence of a structure at the top of the panels and the shape of the asymmetrical curved festoons lets the animals enter the spaces while remaining upright and "head up", without the horns colliding with the structure.

HEAD LOCK

PVB ROBUST

GASCON

HIGHLAND

AUBRAC

SALERS

BLONDE
D'AQUITAINE

The ideal solution for horned beef cattle, designed with the help of breeders.

Especially useful in mountain zones to avoid excessive bedding consumption.

The animals can spend more time comfortably installed at the trough without feeling restrained.

**Powerful
blocking from
the bottom**

Due to the system's original design without a top structure, all the locking devices are located at the bottom of the panel. Its single part lower reinforcement made from 80x80 square beams gives it a rigidity that can withstand any girth. Thus the animals' withers or ears never come into contact with the locking mechanism. Release-proof, force-proof, with its single part pendulum on a ringed joint, the head lock is extremely safe for the farmer, even with particularly heavy and powerful cattle.

Agritubel

HEAD LOCK PVB ROBUST

Maximum visibility

This head lock has been designed to give farmers the best possible view of their livestock.

Easy passage for the farmer

The stall can be accessed by simply stepping over an open space.

Access to the animals from the feed alley

The Robust PVB head lock makes it possible to manually act on the neck and back of the animals from the feeding table without having to enter the housing. It is ideal for the application of external antiparasitics, for example.

Easy and safe individual release

Using a pitchfork or a simple stick, the pendulum unlocks and is then raised by the ring at the top. All without the hands ever approaching the horns.

- The hoops composing the space are welded through the frame beam for maximum rigidity.

SELF-SERVICE PANELS

SUCKLING CATTLE / FATTENING

|| I chose the toughest equipment for my young bulls. A single part, robust, adjustable self-service unit that does not move.

Used to hold animals at the feeding table. For animals being fattened. Horizontal bar panels cause the least amount of restraint and let the most animals feed at the same time. As an alternative to the feeding table, our self-service panels can be fitted with our compatible single-part troughs.

AgriJobs

SELF-SERVICE PANELS M2BH

2 BAR SELF-SERVICE

Manufactured using a single \varnothing 89 mm tube, the M2BH panels are available in 5 models from 2 to 6m in length. This self-service unit can be mounted on any type of building as well as on our range of posts.

Both their length and width are adjustable.

- **Length adjustment:** the 2 ends of the panel are fitted with variable end parts (\varnothing 100 mm tube) which are 50cm long, which provides maximum strength.

The adjustments are permanently secured by two clamping bolts on each tube, guaranteeing the unit's rigidity.

This is a comfort for the installation, with adjustment to the existing infrastructure guaranteed to the nearest millimetre. It also provides flexibility if changes to the installation are made, the panel can be reused in another location with slightly different dimensions.

Recommendations for use: To accompany the growth of adult animals, they can be mounted at an angle to provide more room at the feeding table.

- **Height adjustment:** once installed, the M2BH panels can have two positions to vary their height by 15cm. There is no need to modify the installation or to use tools: simply rotating it on the horizontal axis switches from the lower to the high position and vice versa. This means the installation can adapt to your animals' growth and return to its initial position for the next batch.

860327PH	M.3.B.H. Self - service Ø 89 - 6 m + worker access	1	10

NB: The fixings have the same spacing as the brand's head locks, allowing to switch between them at the same locations to upgrade an installation, either temporarily or permanently, at a lower cost.

|| I bought M3BH to avoid changing batches of pens during fattening ||

SELF-SERVICE PANELS

M3BH

3-BAR SELF-SERVICE

Manufactured using a single \varnothing 89 mm tube, the M3BH panels are available in 5 models from 2 to 6 m in length. The M3BH is ideal for animals from their youngest age until they are adult at the end of their fattening period.

The experience of young bull fatteners has shown the increase in feed intake achieved using an M3BH installation. It is fitted with an intermediate tube that allows wither height adjustment, thus allowing the animals to be fattened in the same pen without the stress of moving them elsewhere.

Both their length and width are adjustable.

- **Height adjustment:** the middle bar has a rack fixing system making it possible to vary its height between 4 positions manually, without needing any tools. This means that the installation can be adapted to your animals, from the start of fattening, and then throughout their growth. It can then be switched back to its initial position for the next batch.

This feature also makes it ideal for suckling cow sheds, to create calf pens, cull cow fattening pens, sick bay pens, etc., especially if a worker access end is included (optional).

- **Length adjustment:** Similar to the **M2BH** (see previous page)

SELF-SERVICE PANELS

MSA WITH HOOPS

The MSA panel shapes make animal feed equality possible between animals despite dominance phenomena, with horned or hornless animals. This self-service is especially appreciated for the Limousine and Charolais breeds.

- Separation of the free stall housing or straw-bedded area from the feed table in order to keep it clean, thus limiting refusals and wastage.
- Cow movement regulation at the feed table for an even ration intake by all the cows, without dominance phenomena.
- Effective closure of the housing so that no animals cross the feeding table, the gap between the bars and their diagonal shape prevents cows and even heifers from passing in any situation.
- Central reinforcement on each panel for more rigidity (must be embedded).

Agritubel

PANELS AND GATES

VARIABLE LENGTH FOR MEAT LIVESTOCK HOUSING

L.V.5 MODELS

Meat cattle farming concerns powerful animals such as young bulls, or cows with their calves, sometimes with large horns.

More than any other, this type of farming requires facilities that protect user safety.

Agritubel has a range of tube gates and panels with 5 ϕ 60 tubes reinforced with ϕ 49 bracing.

This design provides increased strength against livestock.

AgriTool

L.V.5 PANELS AND GATES

VARIABLE LENGTH FOR MEAT LIVESTOCK HOUSING

The gates are available in two versions:

- Auto-block version to be preferred when frequently opened
- Manual version to be preferred for gate protection.

AUTO-BLOCK

MANUAL

PANELS

The L.V.5 panel is to be preferred for the separation of batches of livestock. It opens in both directions and at both ends. Its height can be extended, which is a major advantage for buildings with accumulated bedding. The L.V.5 panel is the flagship bull fattening product.

GATES

Auto-block gates are easy to close.

They have a spring loaded mechanism so that they can be closed by simply pushing them*. This is a safety guarantee in some situations to be able to quickly close a gate before a nervous animal forces its way through.

The locking and safety feature concept prevents the animals from opening the gate.

* See our compatible accessories and options.

Wall or post mounted drinker space

Front calf access

Drinker space on nozzle

L.V.5 MODELS

CONFIGURATIONS THAT SIMPLIFY FARMERS' LIVES

L.V.5 front large cattle passage

L.V.5 Front insemination head lock

Insemination head lock gate

Design your gate or modular panel for your buildings and activities.

■ To integrate with the building's equipment

- Drinker space on nozzle
- Wall or post mounted drinker space

■ For farmer safety

- Worker access

■ To regulate flows

- Calf passage
- Large cattle passage

■ For safe animal care

- Insemination head lock space
- Insemination head lock gate
- Suckling and caesarean panel (to facilitate interventions or give the first suckle)

FIELD BARRIERS & GATES

ADJUSTABLE FIELD GATES

The adjustable field gates are designed with 5 diameter 43 horizontal tubes. They are secured by 2 auto-block bolts.

All the models are padlockable.

The Agritubel range is the most complete to meet all needs: cattle, goat, sheep and horse farms, for professionals as well as private customers.

It is available in all the expert sales outlets.

Field barriers and gates are designed for outdoor use, for indoor use see pages 59 and 105.

SERVICE GATE

- Stand-alone equipment or configuration built into the front or back of an Agritubel field barrier
- With or without auto-block bolt

Service gate without lock

Service gate with auto lock $\varnothing 28$

The service gate allows the passage of the farmer or small animals:

It is an everyday comfort for farmers during their daily visits to the corral, with a simple door to open/close (auto-block bolt) and not a whole gate.

With all sizes up to 7m in 0.5m increments, the Agritubel range provides the widest choice to cover all outdoor situations*, with long-lasting quality equipment.

FIELD GATES & DOORS

FIXED GATES

The single-part fixed field fences are available in 3 families:

- Fixed tubular field gates
- Semi-meshed gates
- Fully meshed gates

Fixed tubular gates are recommended for cattle and horse breeding.

The semi-meshed and fully meshed models have the exclusive feature of the mesh being welded to the tube axis, which gives them maximum quality and degree of finish. They can be used to close off a yard or a path.

Other 1.50 m and 2 m high models are available from our subsidiary ANDRIEU.

FEEDING LIVESTOCK PROPERLY OUTDOORS

The challenge for farmers who want to maintain their technical and economic performance is to guarantee a permanent ration, while limiting or eliminating wastage.

The feeding rack is an essential item of equipment for all outdoor cattle farms to maintain the condition of their livestock.

The Agritubel range covers all your needs for watering as well as feeding or concentrated feed, with equipment designed down to the smallest detail for robustness, long service life and comfort for both animals and farmers. Our modules can be moved using a 3-point tow.

QUADRIBALLE 2 x 3 m

For 2 round bales or 1 square bale

For herds of 40 to 45 adults of all breeds. This model is reinforced at the bottom by two beams and can be used for bale silage. It is highly valued for large herds.

FIXED GRATES 1.80 x 1.50 m

For 1 round bale

Suitable for dairy herds for heifer type cattle.

SELF-CLOSING 1.80 x 1.50 m

For 1 round bale

Suitable for dairy breed herds. Its self-locking grate system limits the risk of wastage.

COVERED FEED RACKS - ON STANDS

Fiabilis head locks

For hornless or dairy breeds, the Fiabilis feed rack is very effective in keeping the animals at the rack, either during examination by the farmer, or to be able to leave the field open while working from a vehicle.

Diagonal bars

For hornless cattle or dairy breeds, with easy head passage but making sure the animal stays in its place without eating its neighbours' rations.

Feed Rack

For all cattle, including the most horned breeds, there is no horizontal structure to interfere with "head up" entry, but the places remain clearly separated at the bottom to keep the heads apart.

MSA elements

For cattle with little or no horns, and also suitable for equines, they combine the hooped elements with a top rail to prevent the risk of intrusion by animals able to climb over the hoops.

For equines

EQUINEAGRIBALLE and EQUINEQUADRIBALLE with straight passages facilitate the entry of the horse's head and neck.

Wall feed rack

- Models manufactured using \varnothing 20/27

UNIVERSAL FEED RACKS

Heavy-duty racks with their hoops welded through the frame tubes, the universal feed racks are suitable for all cattle breeds, including the most heavily horned.

Easy to transport, they are delivered in kits to be assembled on site by simple bolting (assembly instructions included). Popular with large European herds, they are the brand's best-sellers.

Single-part trough

The double-folded inner rim prevents the animals from pushing the contents out of the trough with their snouts, either intentionally or unintentionally. It is a guarantee against wastage.

Their stands are all height adjustable for easy and stable installation, even on slopes or uneven ground. A flat trough also means that the ration is well distributed among the animals.

CREEP FEEDERS

Calf creep feeders

This is the essential equipment for the successful rearing of suckling calves. Our high capacity calf creep feeders can be loaded with a pelleted feed to promote the growth and development of young cattle. Loading can be direct at the front loader. For progressive ration distribution, the creep feeders have an adjustment flap and a locked roof that the calves cannot open. The built-in trough reduces wastage thanks to its double folded anti-cutting rim. It is easy to move when empty using the built-in 3-point tow gear.

Ref.	CALF CREEP FEEDERS	Packaging
875240	Single-sided calf creep feeder, length 2 m without pen (capacity 1340 litres)	2
875241	Single-sided calf creep feeder, length 2.50 m without pen (capacity 1680 litres)	2
875242	Single-sided calf creep feeder, length 3 m without pen (capacity 2020 litres)	2

An optional tubular pen makes it possible to use the creep feeder in a shared cow-calf pen, without the mothers having access to the calves' concentrated feed.

The pen can be folded for easy transport in the raised position and is depth adjustable to accommodate animal growth.

CATTLE AND HORSE PANELS

Panels are mobile elements that are mainly used outdoors but also in buildings. They can be used to create corrals to constitute batches or isolate animals, or to set up a corridor to load animals or move them between two locations. For horses, the panels are particularly suitable for the construction of round pens and mobile stalls.

For storage and transport, a loader is available which can be moved by 3-point tow gear or front loader.

The panels are made entirely of 50x30 mm ovoid tube for maximum rigidity. It is equipped with skids to facilitate the installation of various assemblies. Its fully automated production gives it high quality and long service life.

CATTLE AND HORSE PANELS

Built from oval tubes, the lightweight, transportable skid-mounted panels are assembled using a chain system.

SHEEP BREEDING

Sheep breeding and fattening have moved into the modern age with advances in genetics and diet, but also with the adoption of new methods of rearing both free-range and sheepfold animals.

The country's two production sectors (milk and meat) include no less than 32 sheep breeds. Between an Ile-de-France, a Texel, a Merinos, even if they are all sheep, they are not the same size.

Farmers have come to meet us to develop a range that meets their needs, either for dairy or meat production. Considering the high number and diversity of breeds, our design office has developed and tested ranges that meet the specific regional requirements and needs of each breed.

NB: Our restraint specialist subsidiary ANDRIEU, has a complete range.

ANDRIEU EQUIPEMENT

ZA Boissonade - 12450 LA PRIMAUBE

05 65 68 38 71 - andrieu-materiel-elevage.com

GOAT BREEDING

With 4 milk production areas, the country provides the second largest production of goat's milk in Europe, much of which is processed into an unparalleled variety of renowned cheeses.

The goat is an animal with a strong character and its breeding in a modern context must take into account the specificities of its behaviour: it is an athlete and an outstanding climber.

In the Poitevin region, Agritubel has set up shop in the very heart of the first production zone. This proximity to the farmers gives us an unrivalled understanding of the farms and their specific needs.

GOATS

A large group of white goats are lined up in a metal milking parlor. The goats are looking towards the camera, and their heads are visible through the metal bars of the stalls. The background is slightly blurred, showing more goats and the structure of the milking parlor. The lighting is bright, and the overall scene is clean and organized.

“ I consulted with a technician to choose the most suitable head lock for my goats ”

AGRITUBEL SUITS YOU

Goat's milk production requires a high level of technical skill and attention from the farmer.

The range of technical equipment developed by Agritubel was set up with the sector professionals, technicians and breeders.

Taking into account the specific behaviour of goats, it is aligned with the new technical breeding standards and reconciles comfort, well-being, performance and profitability.

ECOFIX small goat head lock

The Ecofix young goat head lock is the adapted version of the Ecofix Goat. It has 100% of the functions, but adapts to the smaller size of the goats. They can thus get used to the head lock before going into production.

Ref.	ECOFIX SMALL GOAT HEAD LOCK	Collar	Spacing between places	Tube cross section
864221	Ecofix kid locking yoke - 2.5 m / 10 places *	72	245	2485
864240	Ecofix kid locking yoke - 3 m / 12 places *	72	245	2985
864222	Extra post at the end of the section, to be embedded (includes a Ø60 post and two clamps) Allow for one per row of head locks.	-	-	-
861036	Control lever (1 lever every 6 panels)	-	-	-

862046	Ø60 post - on 200 wall - 1m33	-	-	-

Young goats do not produce milk, but their feed, the quality and regularity of the ration are crucial for the farmer: a perfectly fed young goat during its growth will become a top performing dairy goat.

The Ecofix young goat head lock is available in two panel sizes: 2.50m / 10 places or 3m / 12 places.

ECOFIX HEAD LOCK

Ref.	ECOFIX GOAT HEAD LOCK	Neck	Spacing between places	Tube cross section

862046	Ø60 post - on 200 wall - 1m33	-	-	-

The ECOFIX head lock is designed for hornless dairy goats. The Ecofix allows the maximum optimisation of spaces per linear metre at the feed table, while maintaining the same width for each place.

- A structure deployed at height that discourages jumping over it.
- Designed so that only the head can pass through, without damaging the ears, while the legs remain safe.

- Head blocking feature preventing access to the wrong side of the pendulum in the closed position.
- Control lever out of the reach of the goats.
- Noise damper pads on the moving parts.
- Made from Ø 42 tube on the frame and Ø 27 on the inside, Ø60 post to embed
- Head lock and feeder height adjustable using a clamp.

Advantage for assembly

Easy to install with a choice of embedded posts or "u"-shaped yoke assembly.
Quick assembly with ECOFIX mounting

2m, 2.50m or 3m panels

GOAT BREEDING

Troughs adaptable to ecofix goat head locks

For buildings with a non-concrete feeding table, the use of an adaptable feeder is recommended. It is installed by simply attaching it to the head lock.

Manufactured with an anti-wastage rim and a double folded finish to prevent the animals being cut.

Hanging feed racks

For feed distribution, the hanging feed racks can be installed on the partitions or on the gates. They are easy to move around as needed.

SHEEP

A large flock of sheep is grazing in a lush green field. The sheep are densely packed in the middle ground, facing away from the camera. The field is filled with tall, vibrant green grass. In the background, there is a line of trees, including a prominent, large, dark green tree on the right. The sky is bright and clear. The overall scene is peaceful and pastoral.

"LSO" Self service

This self-service is suitable for adult ewes and rams. It is manufactured with a sloping trough to reduce wastage. Equipped with two wither height tubes to prevent crossing, it can be used to distribute fodder as well as dry feed. The LSO allows farmers to create a feeding table that can be extended as required.

The 2.50m module consists of a rectangular anti-cut profile trough and two wither tubes with adjustable stands. The ends are removable so that modules can be assembled endlessly one after the other, while maintaining the continuity of the trough.

The sliding sleeve assembly can be dismantled to free the building at the end of the winter.

Ref.	SHEEP SELF SERVICE (L.S.O.)
864201	L.S.O. start panel, length 2.50 m (each section)
864202	L.S.O. start extension panel, length 2.5 m

SHEEP FARMING

Agriovin self-service feed racks

For separate feed distribution, it is manufactured using a mesh designed for the size of the sheep's snout, which can pass through the grate and chew freely. A sheet metal collection trough underneath prevents the strands from falling to the ground and leaves them within reach of the animals. It can be used to distribute hay or dry feed.

THIS SYSTEM HAS TWO ZOOTECHNICAL ADVANTAGES:

- Anti-wastage, limits overconsumption
- Encourages the animal to salivate to increase its hay intake

AGRIOVIN SINGLE FEED RACK

Anti-lamb bars

AGRIOVIN DOUBLE FEED RACK

Allows 2 pens to be fed simultaneously

Mothers can use the racks without risk to their lambs because the anti-lamb bars prevent lambs from slipping under the trough. With a choice of single and double-sided models, two lengths (2m and 3m) and the possibility of continuous end-to-end feed rack assembly, these models are very successful in tunnel installations in southern regions. They are designed to support the weight of a person, who can climb inside to roll out a bale along its entire length.

Double-sided outdoor feed rack

For fodder distribution in the sheepfold or outdoors (with the optional roof), the feed rack leaves the forage permanently clean and dry within reach of the snout and avoids refusals and wastage thanks to its sheet metal collection trough. A versatile product that can be used indoors and outdoors, for fodder and dry feed.

Ref.	DOUBLE-SIDED FEED RACK	Packaging
864107	Double feed rack with recovery trough	6
864117	Adaptable roof for double feed rack	6

Double sided lamb creep feeder

For feed concentrate distribution in the sheepfold or outdoors for batches of up to 25-30 animals. The animals access the feed from both sides.

Anti-lamb tubes secure the feed trough. The adjustable stands allow perfectly stable installation even on uneven ground. The watertight roof can be opened from both sides for easy reloading and allows outdoor use. The creep feeder is equipped with a hatch for flow adjustment.

OV8000	0m40 x 0m25 multi service sheep trough length 2m00	175	10

Circular feed racks for adult sheep

Of diameter 1.60m they can hold a round bale. The 18.1cm neck bars and the bottom plate prevent the fodder from coming into contact with the sheep's feet.

With 24 places available, there are two models: a diagonal model recommended for unhorned breeds and a straight model suitable for all breeds, even horned.

Easy to install, composed of 3 elements and assembled using vertical pins. It is mainly used outdoors but also as a back-up in a building. It is supplied by opening an element which is simple and lightweight to handle.

Ref.	CIRCULAR SHEEP FEED RACKS	Packaging
OV305	Circular sheep feed rack diameter 1.60 m straight access	7
OV3051	Circular sheep feed rack diameter 1.60 m diagonal access	7

SHEEP FARMING

Variable wall sheep feed racks

The rack is accessible on 2 of the 4 sides. The animals feed through the 140 mm spaced bars (no head passage). The two grids tighten around the bale as it is consumed, using adjustable chains.

This means that a large diameter bale can be loaded (through the opening side) so that the feed rack can be used for several days, and then the spacing readjusted when necessary without having to reload every day. The roof guarantees dry and palatable fodder in all conditions.

Sheet metal anti-wastage trough. 3-point towing system for transport. Skids for manual moving.

It is advisable to position it away from the entrance to the field and in an area sheltered from wind and rain.

Safety: this feed rack allows the adult ewes to be with their lambs. The sheet metal parts prevent head passage.

LV7-SHEEP PANELS AND GATES

For use mainly outdoors for adult animals.

Made from interlocked Ø20 and Ø27 tubes, they are all extendible to 1m in length to fit the field entrance.

The gates are padlockable and fitted with a safety bolt.

LV7-FIELD PANELS AND GATES

Made from Ø34 tubes at the front and Ø43 tubes at the back, they are reinforced by a 45 square through which the tubes pass. Used mainly indoors but also outdoors, they are particularly rigid and can be used to create assemblies that prevent lambs from moving from pen to pen.

PANELS

To better meet the requirements of the different sheep farming regions, two panel heights are available: tubular or semi-meshed. They are mainly assembled using pins. They meet the needs of building design but also of outdoor isolation corrals.

PINNED SHEEP PANELS Height 90 cm

Each model has been designed according to the animal breeds and sizes. They are fixed using pins, either to each other or to a support frame, to form pens (isolation, lambing, etc.). The horizontal tubes are closer together at the bottom for the safety of the lambs. A central flat or tubular reinforcement is added on some models or sizes to stiffen the unit. The sign of an Agritubel panel is its rigidity. The sheet metal models are suitable for creating sheep alleys.

Barred sheep panels

7 tubes - Size 30 square + Ø20 tube

Flat central reinforcement (from 2m) - Supplied with 1 pin

Ref.	Barred sheep panels	Packaging

OV2043	Semi-meshed 3-hole panel 3m00	25

Barred panels (3 hole interlock)

7 Ø27 and Ø20 tubes - Flat
central reinforcement - Washer
stands and domed ends.

Ref.	Barred panels	Packaging
OV2001	Barred 3-hole panel 1m20	25
OV2002	Barred 3-hole panel 2m40	25
OV2003	Barred 3-hole panel 3m00	25
OV2004	Barred panel 3 holes 1m20 with lamb passage	25

OTHER PANEL MODELS

To round up animals, isolate them or protect them, flat panels are suitable for all types of land, even steep. They are easy to handle and assemble without tools. For transport on a machine, they can be safely stacked in a minimum of space on the dedicated loader.

Corner panel

For lambing and feed table.

Height 98cm - Ø27 and Ø20 tubes

1.40m panel with trough space + 0.98m closing
panel. Assembly using yokes with holes

Ref.	Corner panel	Packaging
OV2104	Corner panel (per set)	10

Standard 3m panel

Height 1.10m.
Standard model.

Model with adjustable
roller lamb passage.

Ref.	Sheep panels	Packaging
864203	Standard sheep panel, length 3m00	25
864204	Adjustable passage sheep panel with rollers length 3m00	10

MOBILE GATES

- Stands manufactured in size 50 square tube
- Height 1.45 metres
- Size 40 and 30 square interior tubes
- Supplied with a pin

Ref.	MOBILE GATES
861206	Containment gate, length 2 m
861207	Containment gate, length 3 m
861208	Containment gate, length 4 m
862041	Long pin Ø14 - 1m10

Ref.	ADJUSTABLE RESTRAINT FRAME
861232	Adjustable restraint frame - 0m70/1m10*1m80
861233	Adjustable gate with eye rod

Assembly of the set

SHEEP PANELS

Panels

Height 1.10m - Ø27 and Ø20 tubes
2 assembly chains

Ref.	Panels	Packaging
870101	Panel, length 2m00	20
870103	Panel, length 2m50	20
870104	Panel, length 3m00	20

Sheep panel worker access

7 Ø27 and Ø20 tubes
Extendible to 1m.

Ref.	Worker access version	Packaging
870102	Sheep panel with worker access length 2m00	10

Sheep panel loader

Carries up to 30 panels. Compatible with 3-point tow gear and front loader.

Ref.	Rack and panel loader	Packaging
OV2040	Sheep panel loader	10

Meshed mobile sheep panel

Height 1.50m, chainable Ø27 tubes
and size 30 square Mesh on 1.25m

Ref.	Meshed mobile panels	Packaging
860076	Mobile meshed gate 2m00	25

FOR 35 YEARS AGRITUBEL SERVICE HAS MADE THE DIFFERENCE

AGRITUBEL "All-in-one" delivery

The original manufacturing organisation and the performance of our supply chain allow Agritubel customers to benefit from a complete delivery to the farm:

- All the equipment required for the ordered equipment is delivered from the factory in one delivery
- All the packs are labelled with barcodes for easy identification and inventory before the start of work

PRODUCTION AND SPARE PART TRACKING

Agritubel's after-sales service offers permanent production process tracking, so that existing installations can be expanded even long after the building has been commissioned.

Agritubel uses high quality steels for its products. They are rigorously selected according to the type of equipment produced, thus guaranteeing a long service life.

IN FRANCE AND IN EUROPE

■ ■ Even 2,000 km
away, I was
delivered on time. ■ ■

IVAN - cattle farmer in Bulgaria

■ ■
I bought my
cows in France,
my head locks
too. ■ ■

JUAN - cattle farmer in Spain
