Herd management software

Every day, thousands of dairy farmers around the world rely on their UNIFORM software for monitoring their dairy herd.

Benefits

✔ User friendly interface
✔ No double data entry, due to links to national databases and organizations
✔ Links to nearly all on-farm systems, like sensors, robots and parlours
✔ Fast and easy data entry
✔ Flexible tool for making action lists
✔ Mobile UNIFORM App
✔ A wide variety of practical analyses
✔ Intelligent data validation
✔ Automated backups
✔ Highly educated helpdesk
✔ Individual on-boarding, specifically set up to your needs

With UNIFORM, you can manage the daily life of your herd. The dashboard allows you to see at a glance everything that needs your attention.

Standard

✔ Dashboard with attention lists
✔ UNIFORM App
✔ Country links to national organizations
✔ Cow Calendar (incl. medicine registration)
✔ Treatment protocols (action scheduler)
✔ Herd status overview (fertility)
✔ Health registration
✔ Herd reports
✔ International Farm comparison
✔ Individual concentrate calculation

Country links

Country	Links with: *
Australia	Universal Milk recording, Holstein Australia
Austria	Rinderkennzeichnung und -registriering AMA

United States	DRMS, DHIA milk test results, Universal Milk recording

We have the possibility to read in milk recording data from many other countries with our UMC module. We have very extensive links to institutions in the Netherlands, for more information; please take a look at the Dutch brochure.

Optional modules

To meet your needs as closely as possible, optional modules can be added.

Analyses module

✔ Reproduction and fertility
✔ Milk production (individual or group)
✔ Herd health
✔ Milk production analysis
✔ Milk production forecasts
✔ Cowgrade
✔ Economic overviews

Links with process computers

We can link with almost all modern milk meters, concentrate stations, activity meters, milking robots, and other sensors. It is also possible to link to multiple brands of process computers. Currently we have links available with BouMatic, DeLaval, Dairymaster, GEA, Smaxtec, Sensehub, Afikim, Lely, SAC, Fullwood, NEDAP, PANAzoo, and others.
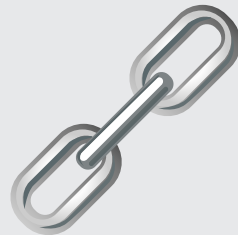

UNIFORM App

✔ Enter events as they happen anywhere on the farm
✔ On demand access to Action lists and Vet check lists
✔ Access your individual cow records
✔ No need for a constant Wi-Fi connection
✔ Use multiple mobile devices on the same farm
✔ For iOs and Android
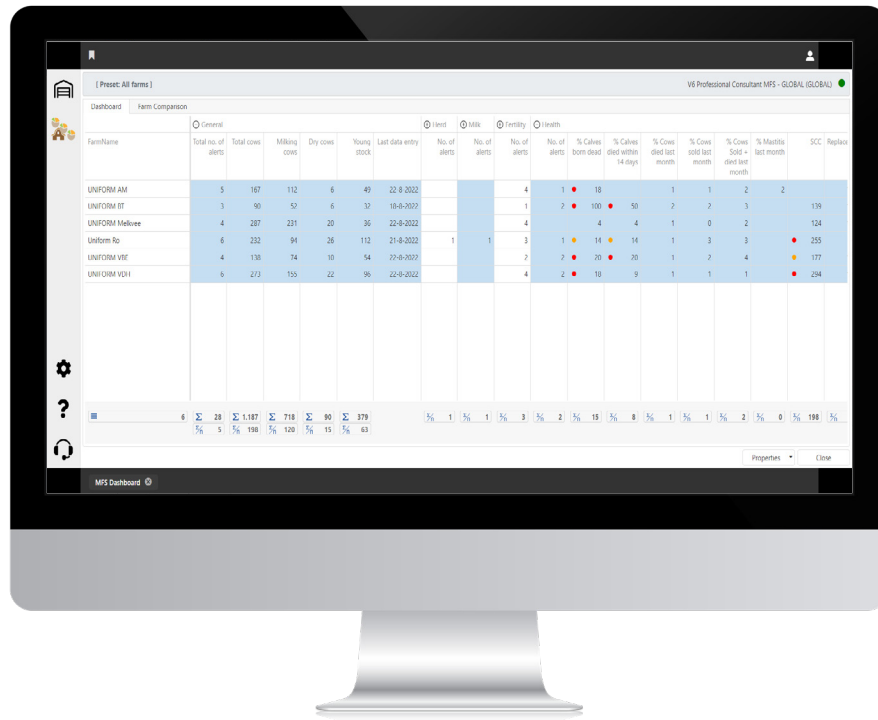

Download your free demo at the Google Play or App store!

For consultants

UNIFORM-Agri offers a multiherd version of its program. The UNIFORM Consultant version has been designed as a solution for consultants in the dairy industry.

UNIFORM Consultant allows you to monitor data from different farms at the same time in a cloud environment. It provides you with a complete management program, which does not only get the data record and daily management of the farms, but you can also use its powerful analysis tools to make decisions. In this UNIFORM solution it's also possible to compare data between different farms and/or groups.

Support and service

Our 24-hour Helpdesk is an invaluable resource for UNIFORM users. Trainings are available with the helpdesk for new customers and continued support is on demand. Support is provided globally in many languages.

Cow data is always safe with DataSafe! DataSafe is a free functionality that comes with the purchase of UNIFORM where a backup of your cow data can be sent automatically to a server hosted by UNIFORM-Agri. This is a great insurance plan for your data in case of hardware issues with the PC, then the Helpdesk can help you restore your latest backup from DataSafe.

All support and updates for the software are included in subscription fees.

Our customers worldwide

"UNIFORM-Agri is a great tool that I would recommend to any dairy farmer. It's a tool that is efficient, easy accessable, very simple for any level of technology and knowledge. The app is very user friendly. You have a great service staff, also, if you have any issues with your software, they can help you get it set up perfectly. It's a very quick and bilingual service."

"In the UNIFORM program you have every data available about what happens on the farm. You can compare everything, from bull fertility, calving data, health and welfare data to milk production data.
It helps us on day-to-day decisions, like which bull's semen to use in services. It allows us to make decisions faster; we anticipate decisions."

"I would really recommend the UNIFORM program to all dairy farmers. In the beginning, you will think: 'There is a lot of information and can I learn this?' But that's with all new things. You'll have to get used to that. If you don't know something, then you can always contact the helpdesk. They know quite a lot. If you have a question or a problem, there is always a solution!"
