

THIS CERTIFICATE ACKNOWLEDGES THAT

8 metric tons of carbon has been sequestered in the Katingan Mentaya, Indonesia Forest by:

Katingan Mentaya is the largest Verified Carbon Standard (VCS) approved REDD+ project in the world, creating sustainable development opportunities for people and restoring valuable ecosystems and habitats for endangered wildlife in Central Kalimantan, Indonesia. This critical conservation project provides life sustaining revenues to 34 local communities and protects 39 vulnerable and endangered wildlife species. The total climate impact over the project's lifespan is equivalent to the annual emissions of a western industrialized country.

The project is located at the following geographic location:
2°33'14.3"S 113°10'09.0"E

VCU serial numbers retired: 6359-303281565-303281572-VCU-016-APX-ID-
