

WE ARE WEAVEWORKS

The GitOps Leaders

Our Company

Weaveworks is a global software and services company with offices in San Francisco, New York, London and Berlin.

In 2014, we set out to create a developer-centric operating model for cloud native applications. We wanted to make it quicker and easier for developers to update their apps, all without compromising security, stability or availability. In 2017, we named this model GitOps.

A founding member of the Cloud Native Computing Foundation and originator of successful OSS projects such as Flux and Flagger, we are committed to GitOps, a developer centric operating model for cloud native applications and infrastructure. As the model gains adoption worldwide, we will remain at the forefront of its development — and its implementation in the enterprise, all over the world.

Our Products

Weave GitOps Enterprise

An enterprise subscription that enables continuous delivery and operations, making it easy to deploy and manage Kubernetes clusters and applications at scale in any environment.

- Tiered commercial support
- A single management console to operate clusters and cluster fleets on premise, in the cloud and at the edge.
- Unified observability and management for instant full-stack understandings.
- Component profiles enabling teams to deploy standard services into any Kubernetes quickly, consistently and reliably.
- Trusted application delivery adds policy as code for continuous security and compliance.
