TELLBO

2019

A nostalgic family robot of the future

BOCCO emo

"BOCCO emo" has a voice recognition function, hands-free dialogue, SIM / WiFi, in addition to the functions of the original "BOCCO" (sending and receiving voice messages, sensor linkage, weather notification and reminding functions, linkage with IoT devices, etc.).

It is a next-generation model robot that supports communication, expresses emotions that generates sympathy, cooperates with API, and acts as a member of the family by delivering various information.

A tailed cushion that heals your heart.

Qoobo

A cushion type therapy robot with a tail released in 2018. When caressed, it waves gently. When rubbed, it swings playfully. And, it occasionally wags just to say hello.

Qoobo is for people who seek healing in their daily lives and those who cannot keep pets due to allergies, living environment, physical problems, etc. Over 20,000 Qoobos have sold both domestically and overseas.

qoobo

Qoobo has 3 colors. From the left, HUSKY GRAY, FRENCH BROWN, SILKY BLACK

A smaller tailed cushion that heals your heart.

Petit Qoobo

Petit Qoobo is a new sibling of Qoobo.

Petit Qoobo, which is one size smaller than Qoobo, reacts not only to the user's stroking but also to the surrounding natural soundscape – be it the sound of clapping or one's voice.

It became a hot topic on social media sites before the release, and the number of pre-orders exceeded 2,500 including the number of crowdfunding support.

Yukai's educational business to find what you like with "fun" as the entrance to all learning

kurikit

Concept

We want to foster the curiosity of "I want to learn, I want to know, and I want to create" that is common to everyone from children to adults. We propose an experience through "kurikit" that allows you to easily challenge your curiosities.

Product Features

- Works and moves immediately.
- There is room for ingenuity.

kurikit

kurikit is a series name that collectively refers to the products and programming environment of Yukai Engineering's educational business.

Amagami Ham Ham

Concept

Amagami Ham Ham, which nibbles gently when you put your finger in its mouth, provides users with the addictive sensation of play-biting by pets and babies with their little teeth.

Product Features

- Developed a special algorithm “HAMgorithm” randomly select from dozens of “nibbling patterns.”
- “HAMring System,” a sensor responds to a finger to activate Amagami Ham Ham.
