THOMPSON INTRO SHEET

An open source management platform just for you

SCANTIST

Background

Organisations around the world are accelerating their digital adoption and transformation initiatives to retain their competitive edge. Increasing investments in technology resulted in the modernisation of legacy applications and new technologies being rolled out at an accelerated pace. As a result, software supply chains have evolved to speed up productivity while reducing time-to-market and deployment costs - through the widespread use of open source.

Do you know that **90% of the average software application code base** is made up of open source components and packages. This then imposes a huge threat for businesses as there are now increased entry points for adversaries and breaches to happen.

Benefits

Scantist's open source management platform provides you unparalleled visibility of your software supply chain and empower decision making.

How we translate business success for you:

Accelerating **time-to-market** with faster development by enabling the use of open source components freely

Being a one-stop-shop for all **commonly used languages** in development

Ensure efficient use of **security resources** by reducing security and compliance efforts

Improve **legal compliance**

Providing fast & applicable **remediation processes**

Lower **vulnerability management** costs

Scantist is a spin-off from a research lab in Nanyang Technological University. Building upon the deep scientific expertise of our leaders and our extensive research base, we have created an open source management platform tailored just for you.
