

SOLUTION SHEET

INTRUSION DETECTION AND PERIMETER PROTECTION

- EMBEDDED ARTIFICIAL INTELLIGENCE
- NO NEED FOR CLOUD
- SECURE DATA
- CONNECTED OBJECTS
- PLUG & PLAY

Detect to prevent and act !

Protect your sites from intrusions (theft, assault or vandalism...) or from crossing prohibited areas to ensure the safety of your employees (unloading docks, production machines, etc.). The Yumain E.C.S (Edge Computing Sensor) solution can be installed and set up in just a few minutes in sensitive areas. With our embedded AI, this intelligent sensor analyses and detects in real time and with great reliability, the intrusions of people or vehicles in risky areas you want to monitor. To ensure maximum efficiency throughout your protection system, the ECS can be connected to various means of alerting via a dry or wireless contact.

- **Reliability:** Very high levels of detection accuracy.
- **Controlled costs:** Affordable solution, no structural installation needed to define the no-go zone.
- **Plug and play:** Easy and fast installation and setting on sensitive sites and areas.
- **Respect for the GDPR:** No data transfer thanks to our AI and embedded image processing in the sensor.
- **Connected alert system:** Wireless communication is established between the sensor and a terminal for the broadcast of a voice and light message during an alert.
