

CARL Source Factory,
a single **CMMS** for industrial equipment
and general resources.

Optimize your maintenance performance

Maintenance and methods, production or general services departments, CARL Source Factory guarantees the best operating conditions for industrial equipment and associated infrastructures (workshops, buildings, networks, etc.); real-time knowledge of assets, maximum availability of the production tool, safety of installations and personnel...

Avail of the advantages of a business software dedicated to industry

- **Master** the **entire life cycle** of fixed and linear equipment.
- **Manage** all your **maintenance processes** (curative, preventive, annual shutdowns...), **new works, environmental...**
- **Trace** the **acts of level 1 maintenance** by the production teams (TPM).
- Automatically **integrate** your **regulatory reports**.
- **Graphically plan** your internal and external **resources** (authorizations, permits, production constraints, etc.).
- **Improve** the efficiency of your field **technicians and inventory managers** with a dedicated mobile application.
- **Exchange** with operations via a **service portal** and a mobile application for service requests.
- **Inspect** your purchases, your inventory, your **budgets**, your **contracts**.
- **Optimize** your activity with a **library of customizable business indicators** (Mean Time Between Failures or MTBF, and Overall Equipment Efficiency or OEE, etc.).
- **Use** our REST APIs and our **catalog of interfaces** to communicate with your Information System: **ERP, MES, CAPM, SCADA**.

Determine your ROI

Embrace the maintenance challenges of Factory 4.0

CARL Source Factory meets the challenges of the maintenance of the future

Towards the Digital Twin

Bring the cartographic dimension to the management of your activity

Integrate, visualize and interact directly with your plans (.DWG), maps (GIS) and digital models (BIM)

Opt for maintenance assisted by artificial intelligence

Leverage your field data (connected objects and machines) to analyze failure-detection, propose appropriate maintenance actions and anticipate wear and tear.
