

Cyber Risk Quantification

Dare to *know*. Be ready to *act*.

“ Citalid’s cyber risk analysis solution helps us enrich our defense maturity analysis including security scorecards from software publishers and add them up into the risk analysis algorithms. Citalid also provides geopolitical context in each country (...) which is also included in the risk analysis. This information is very valuable and save us some reaction time. Finally we can make a connection between risk management and the insurance world to dynamically connect planned security actions to annual negotiations of our risk coverages and premiums.

Thierry Auger, Corporate CIO & Group CISO, Lagardère

Citalid for:

CISO

Risk & Insurance
Manager

Insurer, Reinsurer
& Broker

Cyber Risk:

01 UNDERSTAND

Thanks to our Cyber Threat Intelligence capabilities, be on top of cyber threats targeting your business.

02 REDUCE

Simulate a variety of scenarios to plan your security investment roadmap and measure ROI.

03 SHARE

By slicing your cyber risk into losses, our Cyber Insurance Simulation engine helps you optimize your risk sharing strategy, whether it goes through insurers or your own captive.

See risk in *real terms*.

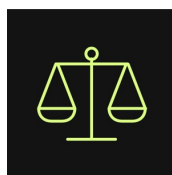

Not every risk is created equal. Citalid's quantification platform allows your business to predict the impact and likelihood of different types of cyber attack, meaning you can prioritise and make smarter decisions.

Key benefits:

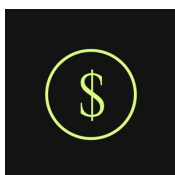

360° risk
visualization

Get access to the big picture
through both strategic and
technical dashboards

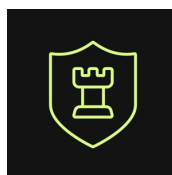

Cyber investments
prioritization

Prioritize your defensive
actions towards the most
relevant threats

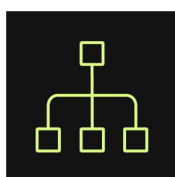

Tailored risk
management posture

Quantify your risk exposure
to better choose your fights
and strategies

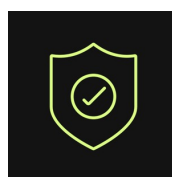

Cyber ROI

Optimize your portfolio of security
solutions & insurance policies by
making the right trade-offs

Cyber governance
normalization

Embed cyber risk
management
across the organization

Streamlining of
security initiatives

Better coordinate your efforts
to strengthen your cyber
program
