

Accelerate your
procurement transformation

Automate your contingent workforce from sourcing to payment with Beeline and Ivalua.

Benefits:

- Combine Beeline's best-in-class extended workforce platform with Ivalua's industry leading spend management suite
- Spend management platform
- Error-free data exchange
- Consolidated, accurate invoicing and reporting
- Intuitive user experience, with each system fulfilling its intended purpose

Strategic procurement transformation

One of the most important strategies for Procurement today is to automate the entire enterprise procurement process for all spend categories across all suppliers, from sourcing to invoice and payment. Ivalua provides a platform to manage all non-services indirect and direct spend and suppliers.

At the same time, Procurement must meet the growing need for contingent talent and services spend – from temporary staff to consultants and contractors – to create the resilient and agile workforce the businesses require to respond to competitive challenges and opportunities. Beeline Extended Workforce Platform meets that need and helps companies meet their strategic and tactical workforce goals.

Complementary solutions to achieve strategic goals

Ivalua's S2P suite delivers spend analysis, sourcing, contract management, and supplier management as well as downstream activities such as e-procurement, purchase orders, invoice automation and accounts payable processes. In order to address the unique requirements around contingent workforce management, Ivalua has partnered with Beeline.

Beeline automates all the processes and steps required to source external talent, whether individual contingent staff or project-based contracts. From sourcing through onboarding and provisioning, and from timekeeping to milestone tracking, Beeline provides a single system of record of all external talent: who they are, where they are, what they are doing, and what facilities, networks, and data they have access to. When the assignment is completed, Beeline ensures consistent offboarding, helping to mitigate security and compliance risks.

Integrated process to eliminate duplication

Beeline and Ivalua's vision is to deliver an end-to-end source-to-pay (S2P) solution that empowers businesses to manage all categories of spend and all suppliers while also managing talent engagements cost-effectively and in compliance with applicable policies and regulations – all in one efficient, integrated process. Initially, Beeline will create consolidated invoice files based on the nature of the engagement and submit them to Ivalua for confirmation and payment. Nothing could be easier.

Give yourself a competitive advantage

To transform your Procurement function, you need a flexible, easy-to-use, solution that enables you to digitize the source-to-pay process and manage supplier risk.

Beeline and Ivalua let you extend your transformation to the extended workforce, with these results:

Automation and efficiency

Our solution automates data flow to ensure that invoicing occurs with an optimal user experience.

Control

Invoicing processes ensure the proper controls on spend and eases payment.

Benefits:

- Enable true business agility and adaptability
- Build a stronger and more resilient workforce and supplier base
- Mitigate supplier risk and improve performance
