

webMethods.io Integration

Connect cloud and on-premises applications with ease

Fact sheet

Connect cloud and on-premises applications with ease

webMethods.io Integration is an integration Platform-as-a-Service (iPaaS) that connects cloud-based and on-premises applications and enables rapid deployment to the cloud.

Integration, especially the synchronization of data between cloud and on-premises applications, is one of the biggest challenges for companies adopting SaaS solutions. To solve this integration challenge, Software AG offers webMethods.io Integration so you can:

- Integrate with cloud-based SaaS applications, such as Salesforce®, LinkedIn® and Marketo®
- Integrate SaaS applications with traditional, on-premises ERP, CRM and warehouse management applications, such as SAP® systems and Oracle® E-Business Suite
- Maintain hybrid portfolios by orchestrating on-premises data and applications with cloud services

Key benefits

- Faster business implementation of SaaS applications
- Scales on demand to meet the requirements of the business
- Lower TCO due to elimination of maintenance and upgrade projects
- Greater reuse of existing integration investments
- Greater flexibility since people can work from anywhere
- Improved customer satisfaction by reducing customer service errors caused by bad data
- Faster time-to-value by eliminating lengthy hardware procurements and installation processes

Features

Extensive connectivity toolkit

webMethods.io Integration provides pre-built connectors enabling connectivity, as well as support for all available operations provided by the application vendor. Connectors include market-leading cloud-based applications in the areas of CRM, ERP and popular SaaS applications. webMethods.io Integration also offers connectors for all modern protocols including FTP/SFTP, RESTful endpoints, AMQP and others.

Workflow orchestration

Create sophisticated integrations with webMethods.io Integration's graphical user interface. With its drag-and-drop palette you can quickly create multi-step orchestration flows without coding.

Workflow templates (recipes)

webMethods.io Integration provides pre-built integration templates available to all customers that serve as the blueprint for integrations before moving onto increasingly complex use cases.

Tenant and role management

Tenant registration and self-service user and role management are key capabilities of webMethods.io Integration. You can easily register for the service at www.SoftwareAG.cloud/Integration. And once your account is set up, you can log onto the website and create additional users and roles. Administrators can use roles to restrict user access to webMethods.io Integration features.

Develop on-premises, deploy to the cloud

Professional developers can now build integration projects in Software AG Designer, a full-featured, Eclipse™-based environment, and deploy them directly into webMethods.io Integration. Simply choose the services and packages you want, and deploy them to a webMethods.io Integration landscape. Let us take care of landscape provisioning, managing patches and upgrades.

Responsive browser-based UI for all developers

Our responsive browser-based user interface is built intentionally for ease of use. The UI can be accessed using any modern browser, and it supports guided development using wizards to help create integrations. Since the interface is built using standards-based HTML5, it is also accessible from tablets and mobile devices.

Mapping, transformation & enrichment

The webMethods Integration Platform is known for its strengths in mapping, transformation and enrichment. These same benefits are provided to webMethods.io Integration users, including citizen developers.

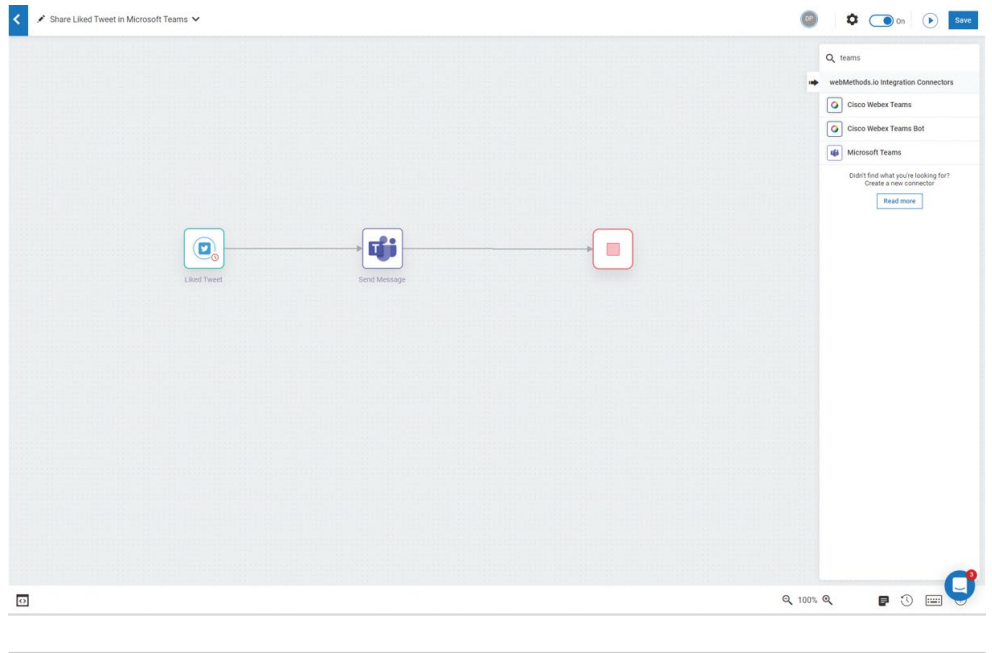

webMethods.io Integration offers drag-and-drop transformation and mapping so you can call operations that provide transformation and enrichment within your integrations.

Monitoring and reporting

Track how your integrations are running in real time using the performance dashboard, which provides an overview of execution history. Additionally, monitor your transaction executions for ongoing operations as well as development and debugging of integrations.

webMethods.io Integration provides full audit and error logs for transaction history and compliance.

webMethods.io Integration also offers total visibility into all of your webMethods.io systems. Real-time alerts notify you when there is an error and allow you to take action, while Root Cause Analysis allows you to drill-down and determine where the issues are. Maintain the highest quality of service and performance with a dynamic view into how your service calls are operating.

webMethods.io Integration workflow

Secure on-premises connectivity

webMethods.io Integration provides connectivity to webMethods Integration Server and to lightweight webMethods Integration Agents for on-premises integrations. Secure connectivity between webMethods.io Integration and on-premises applications is enabled by Software AG Universal Messaging.

All connections are initiated from the on-premises environment, eliminating the need to open firewall ports on the on-premises side.

Embed widgets and bots

Embed powerful data integration into your app to enable new experiences. With Embed's easy-to-use, configurable integration widgets and bots, you can utilize powerful integration in your application interfaces without compromising your brand and user experience.

Embed provides the ultimate flexibility to insert integration capabilities directly into your product through the Embed API, giving your users the ability to connect to 190+ endpoints tailored to your needs. You can develop an ecosystem to drive more user adoption and to make your products "stickier."

Take the next step

With Software AG Cloud you can deliver solutions today, value tomorrow and be well prepared for your digital future. Learn more at www.SoftwareAG.cloud/Integration

ABOUT SOFTWARE AG

Software AG began its journey in 1969, the year that technology helped put a man on the moon and the software industry was born. Today our infrastructure software makes a world of living connections possible. Every day, millions of lives around the world are connected by our technologies. A fluid flow of data fuels hybrid integration and the Industrial Internet of Things. By connecting applications on the ground and in cloud, businesses, governments and humanity can instantly see opportunities, make decisions and act immediately. Software AG connects the world to keep it living and thriving. For more information, visit www.softwareag.com.
