

Recommendations for the safety assessment of arch dam behaviour

The recommendations result from the work of a Working Group of the French Committee of Dams and Reservoirs (CFBR), conducted from October 2014 to October 2018 to develop **recommendations for the justification of the behavior of arch dams**. The October 2018 version of the guide constitutes provisional recommendations from the CFBR. The CFBR intends, within a few years (3 to 5 years in general), and on the basis of feedback from experience and practice of the profession, to transform this guide into final recommendations of the CFBR.

The document includes the text in French and its translation into English.
